## **Hazardous Inquiry:**

*A Hazardous Inquiry* Allan Mazur, 1998 Love Canal a community poisoned by toxic waste Borrowing the multi viewpoint technique of the classic Japanese film RASHOMON sociologist engineer Allan Mazur reveals that there are many often conflicting versions of what occurred at Love Canal His collection of gripping personal tales tells how politics journalism and epidemiology often clash when confronting a potential community disaster *Hazardous Decisions* D. Huitema, 2005-12-15 where Jeremy Richardson Albert Weale and Hugh Ward were excellent hosts at the Department of Government and Thomas Christiansen a very good roommate Having included the UK as a country where decision processes were far less participatory and thus worse in my own view than those in the Netherlands I started doing my first interviews there which were mainly intended to identify suitable case studies for research But then I read a highly critical review of a book that had a similar topic as my study The critique was that cases of hazardous waste siting cannot adequately be studied without understanding their national context This made me decide to devote some attention to the legal context of hazardous waste siting in the three countries of interest which is of course only a part of the national context and its development through the years The study of the UK system of environmental regulation and land use planning was not a simple issue and I was warned various times for instance by Andrew Blowers at the Open University that the legislation was highly complex and easily misinterpreted I felt personally touched by such warnings and decided that I should perhaps approach the UK system a bit less as an evil empire and maybe be a bit more objective in my appraisals

*Uncertain Hazards* Sylvia Noble Tesh, 2018-05-31 Ordinary citizens frequently organize around environmental issues on which little scientific evidence exists to back activists' claims. Should we then dismiss such claims as spurious? Or should we side with citizens against the polluters? *Uncertain Hazards* takes neither path. In exploring the all too common problem of scientific uncertainty about links between pollution and public health, Sylvia Noble Tesh shows that much of the problem can be traced to the newness of the environmental movement. The inability of scientists to find data corroborating citizens' claims stems partly from the pre-environmentalist assumptions still influencing the environmental health sciences, Tesh says. On the other hand, the conviction of activists that industrial pollutants threaten their health results from the environmental movement's success in promoting new ideas about nature. Tesh points to ways that environmentalist ideas have begun to affect science, thus making more likely the discovery of links between exposure to industrial pollutants and a community's health problems. Those ways include the expansion of diseases construed as environmental in cause, the study of society's most vulnerable citizens in determining safe levels of pollution, and a new focus on the effects of exposure to chemical mixtures. Using community activists' own words and experiences, Tesh argues against the familiar charge that activists are naive about science. It is inaccurate, she says, to characterize debates over the hazardous nature of pollution as debates between laypeople and experts. Instead, they are debates between two groups of experts. It is also inaccurate, however, to see the conflict over environmental pollution only in scientific terms. The conflict has culturally important moral dimensions, and community activists draw heavily, although often unconsciously, on the lessons taught by environmentalism.
