Great Drought Of 1976:

The Great Drought of 1976 Evelyn Cox, 1978 **Geological Survey Professional Papers**, 1949 **Appraisal of the Water Resources of the Big Sioux Aquifer, Moody County, South Dakota** Donald S. Hansen, 1988 Climate and History Robert I. Rotberg, Theodore K. Rabb, 2014-07-14 The effect of climate on historical change represents an exciting frontier for reading and research In this volume scholars contribute to an area of interdisciplinary study which has not been systematically explored by climatologists and historians working together Originally published in 1981 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 **A Technical Description of the Large Area Crop Inventory Experiment (LACIE)**, 1979 *Ocean Variability in the U.S. Fishery Conservation Zone, 1976* Julien R. Goulet, Elizabeth D. Haynes, 1979 Some responses of fisheries resources to natural climate ocean variability in 1976 are summarized Emphasis is on the U S Fisheries Conservation Zone Areas in which the United States has an established fishery or commercial interest in a local fishery are also considered Contributed papers present various aspects of the marine climate in 1976 **Trees and Woodlands** George Peterken, 2023-02-16 Features almost 300 colour photographs and brings together more than 60 years of research by a leading voice in British woodland ecology Trees define woodland They provide a complex multi layered habitat for a great range of wildlife yet they are wildlife themselves reacting to their circumstances and each other Woodlands are important to people supplying timber food and fuel accumulating carbon and offering places of refuge and refreshment But they are also under threat some stand in the way of progress and all are becoming increasingly vulnerable to neglect disease and climate change Trees and Woodlands brings together decades of research to explore the ecology nature conservation and wider cultural value of our native trees and shrubs and the various ways they have combined as woodland Incorporating personal experiences from 60 years as a forest ecologist Peterken describes the long history of use and management how this has influenced woodland wildlife and our art beliefs and social attitudes He concludes that most woods should be managed their timber and small wood being put to good use but recognises that this is all part of a larger question the future of ourselves Containing nearly 300 photographs and interspersed with box texts describing the history and ecology of representative woods across Britain this is a commentary on trees woodlands and our relationship with them from one of our most highly regarded forest ecologists **Flood Hazards Along the Toutle and Cowlitz Rivers, Washington, from a Hypothetical Failure of Castle Lake Blockage** Antonius Laenen, L. L. Orzol, 1987 **Media and Water** Joanne Garde-Hansen, 2021-01-14 As flooding drought and water scarcity become more pronounced due to climate change so the

way in which these events are presented in the media assumes greater significance. In particular, the media plays an important role in shaping the public perception and understanding of water issues and debates around extreme weather events. More generally, Joanne Garde Hansen's book offers a sustained and comprehensive exploration of media representations of water. Drawing on a wide range of media including newspapers, digital photography, radio, television, and video, as well as empirical research on media and memory, she examines how drought, flooding, and water management have been portrayed in the media both historically and in the contemporary world. The use of the media by water institutions to manage public perceptions and the use of digital media by the public to engage with water companies is also included. A particular feature of the book is an examination of water and gender in developed nations. One of the first books to look at media representations of water, this pioneering work provides valuable insights for both scholarly and professional water research.

Should Global Agriculture be Liberalized? Jean-Marc Boussard, 2008-01-10. According to standard economic theory and modelling, liberalizing agriculture will result in important welfare gains. Because of price volatility, an alternative model based in general disequilibrium in the Wicksellian tradition provides much less optimistic conclusions, actually supported by the recent evolution of the world agricultural system as well as by the history of the many attempts of agricultural trade liberalization since the 18th century.

In Pursuit of Butterflies Matthew Oates, 2015-06-04. The butterflies of Britain, in the words of one of their greatest champions, Matthew Oates, has led a butterfly life. Naturalist, conservationist, and passionate lover of poetry, he has devoted himself to these exalted creatures, to their observation, to singing their praises, and to ensuring their survival. Based on fifty years of detailed diaries, *In Pursuit of Butterflies* is the chronicle of this life. Oates leads the reader through a lifetime of butterflying across the mountain tops, the peat bogs, sea cliffs, meadows, heaths, the chalk downs, and great forests of the British Isles. Full of humour, zeal, digression, expertise, and anecdote, this book provides a profound encounter with one of our great butterfly lovers and with a half century of butterflies in Britain.

Natural Decadal Climate Variability Vikram M. Mehta, 2017-03-16. *Natural Decadal Climate Variability: Societal Impacts* is an important work for understanding the natural decadal climate variability (DCV), a phenomenon which has made long-lasting impacts on civilizations, especially on water availability and agriculture. This book comprehensively covers multi-year to decadal variations in instrument-measured precipitation and temperature, water availability, and river flows, crop production, agricultural irrigation, inland waterborne transportation, hydroelectricity generation, and fish and crustacean captures since the 1960s. A longer-term perspective is provided with the use of multi-century data on dry and wet epochs based on tree-ring information and corroborating evidence from other literature. This valuable work will benefit climate scientists, meteorologists, hydrologists, agronomists, water transportation planners, resource economists, policymakers, professors, and graduate students, and anyone else who has an interest in learning how natural climate phenomena has influenced societies for at least the past 1000 years.
