Great Ideas In Physics:

Great Ideas in Physics Alan P. Lightman, 1992 This is an interdisciplinary textbook in physics for non science majors and is accessible to students with little science background The text focuses on four ideas the conservation of energy the second law of thermodynamics the relativity of time and the wave particle duality of nature [Great Ideas in Physics](#) Alan Lightman, 2000-06-26 The conservation of energy the second law of thermodynamics the theory of relativity quantum mechanics together these concepts form the foundation upon which modern physics was built But the influence of these four landmark ideas has extended far beyond hard science There is no aspect of twentieth century culture including the arts social sciences philosophy and politics that has not been profoundly influenced by them In *Great Ideas in Physics* Alan Lightman clearly explains the physics behind each of the four great ideas and deftly untangles for lay readers such knotty concepts as entropy the relativity of time and the Heisenberg uncertainty principle Throughout the book he uses excerpts from the writings of scientific luminaries such as Newton Kelvin Einstein and de Broglie to help place each in its proper historical perspective And with the help of expertly annotated passages from the works of dozens of writers philosophers artists and social theorists Lightman explores the two way influences of these landmark scientific concepts on our entire human culture and the world of ideas *The Physics Book* DK, 2020-03-10 Learn about the Big Bang theory astrophysics and gravity in *The Physics Book* Part of the fascinating Big Ideas series this book tackles tricky topics and themes in a simple and easy to follow format Learn about Physics in this overview guide to the subject brilliant for beginners looking to learn and experts wishing to refresh their knowledge alike *The Physics Book* brings a fresh and vibrant take on the topic through eye catching graphics and diagrams to immerse yourself in This captivating book will broaden your understanding of physics with More than 100 ground breaking ideas in this field of science Packed with facts charts timelines and graphs to help explain core concepts A visual approach to big subjects with striking illustrations and graphics throughout Easy to follow text makes topics accessible for people at any level of understanding *The Physics Book* is the perfect introduction to the science aimed at adults with an interest in the subject and students wanting to gain more of an overview Here you ll discover more than 90 of the most important laws and theories in the history of physics and the great minds behind them If you ve ever wondered exactly how physicists formulated and proved groundbreaking abstract concepts this is the perfect book for you Your Physics Questions Simply Explained How do magnets generate electricity What is antimatter Is time travel possible If you thought it was difficult to learn the many laws and concepts of physics *The Physics Book* presents key information in a clear layout Learn about Pythagoras s observations on music Galileo s experiments with spheres and Isaac Newton s theories of gravity and laws of motion with superb mind maps and step by step summaries *The Big Ideas Series* With millions of copies sold worldwide *The Physics Book* is part of the award winning Big Ideas series from DK The series uses striking graphics along with engaging writing making big topics easy to understand **The Two Greatest Ideas** Linda Trinkaus

Zagzebski,2023-06-27 In *The Two Greatest Ideas* Linda Zagzebski tells the history of two hugely impactful ideas and their crucial role in shaping human culture over the last two thousand years These ideas Zagzebski argues underlie virtually all of the intellectual innovations of human civilization yet are so simple they are almost invisible The first idea is that the human mind is capable of grasping the universe The second is that the human mind is capable of grasping itself Based on a series of lectures given in 2018 at Soochow University Zagzebski offers an ambitious big history narrative of the emergence and influence of these two ideas and the tension and conflict between them The idea that the human mind can grasp the universe had a significant influence on culture in many parts of the world in the first millennium BCE giving rise to physics mathematics philosophy and most major religions In the early modern period however particularly in the West the idea that the human mind can grasp itself supplanted some of the wider focus and popularity of the idea that human mind can grasp the universe revealing something important was missing namely the subjectivity of minds This transformation was reflected in radical changes in philosophy political thought art literature religion and science In this book Zagzebski provides a new frame for understanding the intellectual underpinnings of Western culture and thought through an illuminating exploration of the history and contemporary legacy of these two great ideas including reflections on their history in Eastern thought Zagzebski also reveals the deep roots of some familiar divisions in contemporary culture e g autonomy versus harmony and rights versus responsibilities as they relate to the great ideas The book then concludes with a discussion of what reconciling the two great ideas might entail including the possibility of a third great idea
