Great Copernicus Chase And Other Adventures In Astronomical History:

The Great Copernicus Chase and Other Adventures in Astronomical History Owen Gingerich,1992 **In Quest of the Universe** Theo Koupelis,2010-02-04 Designed for the nonscience major In Quest of the Universe Sixth Edition is a comprehensive student friendly introduction to astronomy This accessible text guides readers through the development of historical and current astronomical theories to provide a clear account of how science works Koupelis distinct explanations acquaint students with their own solar system before moving on to the stars and distant galaxies This flexible approach allows instructors to arrange the modules to fit their own course needs With numerous interactive learning tools the Starry Night planetary software package and stunning visuals and up to date content In Quest with the Universe Sixth Edition is an exciting overview of this ever changing discipline *In Quest of the Solar System* Theo Koupelis,2010-02-04 Available with WebAssign Author Theo Koupelis has set the mark for a student friendly accessible introductory astronomy text with In Quest of the Universe He has now developed a new text to accommodate those course that focus mainly on planets and the solar system Ideal for the one term course In Quest of the Solar System opens with material essential to the introductory course gravity light telescopes the sun and then moves on to focus on key material related to our solar system Incorporating the rich pedagogy and vibrant art program that have made his earlier books a success Koupelis In Quest of the Solar System is the clear choice for students making their way through their first astronomy course **Ingenious Pursuits** Lisa Jardine,2000-12-05 In this fascinating look at the European scientific advances of the seventeenth and early eighteenth centuries historian Lisa Jardine demonstrates that the pursuit of knowledge occurs not in isolation but rather in the lively interplay and frequently cutthroat competition between creative minds The great thinkers of that extraordinary age including Isaac Newton Johannes Kepler and Christopher Wren are shown in the context in which they lived and worked We learn of the correspondences they kept with their equally passionate colleagues and come to understand the unique collaborative climate that fostered virtuoso discoveries in the areas of medicine astronomy mathematics biology chemistry botany geography and engineering Ingenious Pursuits brilliantly chronicles the true intellectual revolution that continues to shape our very understanding of ourselves and of the world around us Parallax Alan W. Hirshfeld,2002-05-01 In the dramatic tradition of the best selling Longitude Parallax charts the historical path of observational astronomy s most daunting challenge measuring the distance to a star The greatest scientific minds applied themselves in vain to the problem across the millennia beginning with the ancient Greeks Not until the nineteenth century would three astronomers armed with the best telescopes of the age race to conquer this astronomical Everest their contest ending in a virtual dead heat Against a sweeping backdrop filled with kidnappings dramatic rescue swordplay madness and bitter rivalry Alan Hirshfeld brings to life the heroes of this remarkable story Meet the destitute boy plucked from a collapsed building who becomes the greatest telescope maker the world has ever seen the hot tempered Dane whose nose is lopped off in a duel over mathematics the

merchant's apprentice forced to choose between the lure of money and his passion for astronomy and the musician who astounds the world by discovering a new planet from his own backyard. Generously illustrated with diagrams, period engravings, and paintings, *Parallax* is an unforgettable tale that illuminates the distinctly human side of science. **Ethics and Mathematics Education** Paul Ernest, 2024-06-10 This edited volume is an inquiry into the ethics of mathematics education and to a lesser extent the ethics of mathematics. The imposition of mathematics for all raises questions of ethics. What are the ethics of teaching school mathematics? What are the costs as well as the benefits? What are the ethical issues raised by the official aims of mathematics teaching, the planned curriculum, the pedagogies employed in school and college mathematics, and the assessment systems? These questions are addressed in the book as well as what systems of ethics we might use. The volume ventures into a burgeoning new field. It offers a unique set of investigations, both theoretical and in terms of practices. It announces the ethics of mathematics education as a new subfield of research and includes valuable contributions from many of the best known researchers in mathematics education. Additionally, it is a valuable resource for students, teachers, and researchers in the field. This is an enduring and classic source book in the field. From the wisdom of leading scholars to the little heard voices of students, this collection offers the reader many striking new insights into the ethics of mathematics and education. **Galileo Galilei** James MacLachlan, 1999-04-15 The scientific innovations of Galileo Galilei are pivotal to our understanding of the laws of the natural world. Drawing on his diverse studies in philosophy, mathematics, mechanics, music, astronomy, and engineering, Galileo developed revolutionary theories that thoroughly changed the disciplines of physics, mathematics, astronomy, and technology. Galileo Galilei traces the great scientist's education, describes his maverick experiments in Padua and Pisa, and recreates the ingenious pathway of his famous discoveries. Often censored and imprisoned for his radical ideas that clashed with fundamental Church doctrines, Galileo persisted in his pursuit of scientific truths to bestow upon future generations the inspiration to challenge conventional views. His theories about the motions of falling bodies, his study of pendulums, and his major discoveries in astronomy made with a self-built telescope are all clearly explained in this volume. Heavily illustrated with photographs, graphics, and technical schemes, *Galileo Galilei* also features a number of sidebars elucidating important details of the great man's contributions. *Oxford Portraits in Science* is a collection of scientific biographies for young adults. Written by top scholars and writers, each biography examines the personality of its subject as well as the thought process leading to his or her discoveries. These illustrated biographies combine accessible technical information with compelling personal stories to portray the scientists whose work has shaped our understanding of the natural world. **Astronomers and Cosmologists** Dean Miller, 2014-01-01 In this book, a breakdown of the life and work of some of history's pioneers in the study of astronomy and cosmology are thoroughly explored. This volume provides excellent biographical sketches for trailblazers in the sciences. Articles are devoted to specific scientists covering the contributions to their field, specifically addressing how their research, discoveries, and inventions impacted human

understanding and experience This historical review includes scientists from around the world and throughout the centuries with a chapter specifically devoted to the top scientific contributors of the 21st century **Star Maps** Nick

Kanas,2012-06-05 Until the publication of the first edition of Star Maps books were either general histories of astronomy using examples of antiquarian celestial maps as illustrations or catalogs of celestial atlases that failed to trace the flow of sky map development over time The second edition focuses on the development of contemporary views of the heavens and advances in map making It captures the beauty and awe of the heavens through images from antiquarian celestial prints and star atlases This book uniquely combines a number of features 1 the history of celestial cartography is traced from ancient to modern times 2 this development is integrated with contemporary cosmological systems 3 the artistry of sky maps is shown using beautiful color images from actual celestial atlases and prints 4 each illustration is accompanied by a legend explaining what is being shown and 5 the text is written for the lay reader based on the author s experience with writing articles for amateur astronomy and map collector magazines This updated second edition of Star Maps contains over 50 new pages of text and 44 new images 16 in color including completely new sections on celestial frontispieces deep sky objects playing card maps additional cartographers and modern computerized star maps There is also expanded material about celestial globes volvelles telescopes and planets and asteroids **Enrico Fermi** Dan Cooper,1999-02-04 This compelling biography traces

Fermi s education in Italy his meteoric career in the scientific world his escape from fascism to America and the ingenious experiments he devised and conducted at the University of Rome Columbia University and the Los Alamos laboratory

Charles Babbage Bruce Collier,James MacLachlan,2000-09-28 Charles Babbage the grandfather of the modern computer did not live to see even one of his calculating machines at work A dazzling genius with vision extending far beyond the limitations of the Victorian age Babbage successfully calculated a table of logarithms during his years at Cambridge University allowing mathematical calculations to be executed with extreme precision Only the possibility of human error prevented complete accuracy and Babbage understood that the only way to attain perfection is to leave the human mind entirely out of the equation He devoted most of his life and spent most of his private fortune and government stipend trying to improve his difference engines and analytical engines Bruce Collier and James MacLachlan chronicle Babbage s education and scientific career his remarkably active social life and long string of personal tragedies his forays into philosophy and economics his successes and failures and the biggest disappointment of his life his ingenious inventions were centuries ahead of the primitive capabilities of Victorian technology *Michael Faraday* Colin A. Russell,2001-01-04 Faraday discovered

benzene isobutylene and two chlorides of carbon But despite these and other accomplishments in chemistry he is chiefly remembered for his work in physics In 1831 he proved that magnetism could generate an electric current thereby establishing the field of electromagnetism and leading to the invention of the dynamo In addition to his extraordinary scientific activities Faraday was a leader in his church whose faith and wish to serve guided him throughout his career

Comets, Popular Culture, and the Birth of Modern Cosmology Sara Schechner Genuth, 2021-03-09 In a lively investigation into the boundaries between popular culture and early modern science Sara Schechner presents a case study that challenges the view that rationalism was at odds with popular belief in the development of scientific theories Schechner Genuth delineates the evolution of people's understanding of comets showing that until the seventeenth century all members of society dreaded comets as heaven sent portents of plague flood civil disorder and other calamities Although these beliefs became spurned as vulgar superstitions by the elite before the end of the century she shows that they were nonetheless absorbed into the science of Newton and Halley contributing to their theories in subtle yet profound ways Schechner weaves together many strands of thought views of comets as signs and causes of social and physical changes vigilance toward monsters and prodigies as indicators of God's will Christian eschatology scientific interpretations of Scripture astrological prognostication and political propaganda and celestial mechanics and astrophysics This exploration of the interplay between high and low beliefs about nature leads to the conclusion that popular and long held views of comets as divine signs were not overturned by astronomical discoveries Indeed they became part of the foundation on which modern cosmology was built

Tycho and Kepler Kitty Ferguson, 2013-01-31 The extraordinary unlikely tale of Tycho Brahe and Johannes Kepler and their enormous contribution to astronomy and understanding of the cosmos is one of the strangest stories in the history of science Kepler was a poor devoutly religious teacher with a genius for mathematics Brahe was an arrogant extravagant aristocrat who possessed the finest astronomical instruments and observations of the time before the telescope Both espoused theories that seem off the wall to modern minds but their fateful meeting in Prague in 1600 was to change the future of science Set in one of the most turbulent and colourful eras in European history when medieval was giving way to modern Tycho and Kepler is a double biography of these two remarkable men **Ivan Pavlov** Daniel Todes, 2000-06-22 This book in the Portraits in Science series is a biography of the Russian physiologist Ivan Pavlov 1849-1936 who was awarded the Nobel Prize for Medicine in 1904 for his research into the digestive system He is perhaps most commonly associated with his research work using dogs **Ernest Rutherford** J. L. Heilbron, 2003-06-12 An engaging biography that captures the excitement of the early days of nuclear physics Ernest Rutherford tells the story of the down to earth New Zealander who became one of the foremost pioneers of subatomic physics **Measuring the Universe** Kitty Ferguson, 2013-01-31 Suppose you and I still wondered whether all of the pinpoints of light in the night sky are the same distance from us Suppose none of our contemporaries could tell us whether the Sun orbits the Earth or vice versa or even how large the Earth is Suppose no one had guessed there are mathematical laws underlying the motions of the heavens How would how did anyone begin to discover these numbers and these relationships without leaving the Earth What made anyone even think it was possible to find out how far without going there In *Measuring the Universe* we join our ancestors and contemporary scientists as they tease this information out of a sky full of stars Some of the questions have turned out to be loaded and a great deal besides

mathematics and astronomy has gone into answering them Politics religion philosophy and personal ambition all have played roles in this drama There are poignant personal stories of people like Copernicus Kepler Newton Herschel and Hubble Today scientists are attempting to determine the distance to objects near the borders of the observable universe far beyond anything that can be seen with the naked eye in the night sky and to measure time back to its origin The numbers are too enormous to comprehend Nevertheless generations of curious people have figured them out one resourceful step at a time Progress has owed as much to raw ingenuity as to technology and frontier inventiveness is still not out of date

Linus Pauling Thomas Hager, Tom Hager, 2000-06 Profiles the Nobel Prize winning chemist who described the nature of chemical bonds made important discoveries in the fields of quantum mechanics immunology and evolution and used his scientific fame to help advance political causes

Alexander Graham Bell Naomi Pasachoff, 1996-08-29 Alexander Graham Bell forever changed the world The telephone and his many other landmark inventions rank among the most transforming and enduring of the modern era But it was his work with the deaf teaching as well as inventing tools to ease communication that he considered his life's work

Martin Folkes (1690-1754) Anna Marie Roos, 2021-04-15 Martin Folkes 1690 1754 Newtonian Antiquary Connoisseur is a cultural and intellectual biography of the only President of both the Royal Society and the Society of Antiquaries Sir Isaac Newton's protégé astronomer mathematician freemason art connoisseur Voltaire's friend and Hogarth's patron his was an intellectually vibrant world Folkes was possibly the best connected natural philosopher and antiquary of his age an epitome of Enlightenment sociability and yet he was a surprisingly neglected figure the long shadow of Newton eclipsing his brilliant disciple A complex figure Folkes edited Newton's posthumous works in biblical chronology yet was a religious skeptic and one of the first members of the gentry to marry an actress His interests were multidisciplinary from his authorship of the first complete history of the English coinage to works concerning ancient architecture statistical probability and astronomy Rich archival material including Folkes's travel diary correspondence and his library and art collections permit reconstruction through Folkes's eyes of what it was like to be a collector and patron a Masonic freethinker and antiquarian and virtuoso in the days before science became subspecialised Folkes's virtuosic sensibility and possible role in the unification of the Society of Antiquaries and the Royal Society tells against the historiographical assumption that this was the age in which the two cultures of the humanities and sciences split apart never to be reunited In Georgian England antiquarianism and science were considered largely part of the same endeavour
