History's Greatest Decisions Bill Price, 2017-01-29 History's Greatest Decisions identifies and profiles the many important and difficult decisions leaders have made through history which shaped the world as we know it today One of the defining features of being human is our capacity for complex problem solving Most of the time we deal with mundane concerns like what to have for breakfast or which pair of shoes to wear but occasionally people face decisions about rather weightier matters History's Greatest Decisions is concerned with this second category those important and difficult decisions which only a very few people get to make and which can impact on the lives of millions of others and have the potential to change the world From our unknown ancestors who made the first stone tools to those people in Northern Ireland who managed to put aside their differences in order to create a better future for their children from the most powerful man in the world deciding not to start a nuclear war to a woman on a bus standing up for her rights refusing to move seats History's Greatest Decisions looks at well known and not so well known examples of people who made the crucial decisions and got them right

Making Great Decisions in Business and Life David R. Henderson, Charles L. Hooper, 2006 The phrase work smarter not harder has been repeatedly ridiculed in the Dilbert comic strip and elsewhere not because it is a bad idea but because it is thrown like a brick lifesaver to drowning employees To tell someone to work smarter is like telling someone to be happier healthier and richer It is not much help to merely repeat the objective what people need

is a plan for achieving the objective In Making Great Decisions we show our readers how to achieve their objectives We write to help those in business and those in the business of life i e everyone to work smarter Our ideas are both simple and powerful We offer a better way to look at problems so that the solutions are easier to find We help supplement our readers clear thinking by summarizing some of the most powerful techniques we have discovered Have you ever driven through corn country From a distance all you see are corn stalks and more corn stalks in a jumbled mess Then suddenly when you get closer your perspective changes and you can see down the rows and realize that the corn was planted perfectly in straight lines Your perception of the crop changes from a messy jumble to a clear picture simply because you re in the right spot This book puts readers in that ideal spot So many problems seem like hopeless jumbles but then when you start using the techniques we discuss here they start to look as straightforward as the straightest line in an Iowa cornfield What motivated us to write this book is that over the years both of us have regularly come across people in organizations often bright people with MBAs or other graduate degrees who don t think they have the time energy or skills to make good decisions They have many clues but don t know how to put them together They regularly face situations that they could analyze with some of the tools they learned in their courses but they don t realize that We don t hold ourselves apart from this group and stories of our successes and failures are sprinkled throughout Making Great Decisions in Business and Life Publisher s Website **Great**

Big Data for Big Decisions Krishna Pera, 2022-12-30 Building a data driven organization DDO is an enterprise wide initiative that may consume and lock up resources for the long term Understandably any organization considering such an initiative would insist on a roadmap and business case to be prepared and evaluated prior to approval This book presents a step by step methodology in order to create a roadmap and business case and provides a narration of the constraints and experiences of managers who have attempted the setting up of DDOs The emphasis is on the big decisions the key decisions that influence 90% of business outcomes starting from decision first and reengineering the data to the decisions process chain and data governance so as to ensure the right data are available at the right time every time Investing in artificial intelligence and data driven decision making are now being considered a survival necessity for

organizations to stay competitive While every enterprise aspires to become 100% data driven and every Chief Information Officer CIO has a budget Gartner estimates over 80% of all analytics projects fail to deliver intended value Most CIOs think a data driven organization is a distant dream especially while they are still struggling to explain the value from analytics They know a few isolated successes or a one time leveraging of big data for decision making does not make an organization data driven As of now there is no precise definition for data driven organization or what qualifies an organization to call itself data driven Given the hype in the market for big data analytics and AI every CIO has a budget for analytics but very little clarity on where to begin or how to choose and prioritize the analytics projects Most end up investing in a visualization platform like Tableau or QlikView which in essence is an improved version of their BI dashboard that the organization had invested into not too long ago The most important stakeholders the decision makers are rarely kept in the loop while choosing analytics projects This book provides a fail safe methodology for assured success in deriving intended value from investments into analytics It is a practitioners handbook for creating a step by step transformational roadmap prioritizing the big data for the big decisions the 10% of decisions that influence 90% of business outcomes and delivering material improvements in the quality of decisions as well as measurable value from analytics investments The acid test for a data driven organization is when all the big decisions especially top level strategic decisions are taken based on data and not on the collective gut feeling of the decision makers in the organization

Medicare & You, The Knowledge to Make Good Decisions, Resource Kit, September 1999, 2000 **Congressional Record** United States. Congress, 2002 Vital Signs David A. Dulio, Candice J. Nelson, 2006-05-26 It was the best of elections it was the worst of elections The 2004 presidential contest mobilized a record number of voters with 121 million Americans showing up at the polls But in many eyes the 2004 race also plumbed new depths It was the most expensive presidential election in history with a price tag of 2.2 billion It was also marked by unprecedented negativity for example both George W Bush and John Kerry came under fire for their activities during the Vietnam War which ended three decades ago In Vital Signs David Dulio and Candice Nelson analyze the Bush and Kerry campaigns and use them as the springboard for a broader exploration of the current U S campaign system and its strengths and weaknesses The book addresses four key issues Who is in charge of modern campaigns How effective are the key players What role does money play And are campaigns being conducted in an ethical manner In answering these questions Dulio and Nelson draw on a wide range of sources including focus groups interviews with campaign professionals and a unique dataset based on multiple surveys of political consultants party operatives and the public The culmination of the seven year Improving Campaign Conduct project Vital Signs should become an integral part of the debate about American campaigns and elections *Military Review*, 1999 *The Role of the Church in Aging* Michael C. Nuclear Proliferation and the Psychology of Political Leadership Kelly O'Reilly, 2014-09-15 This book offers a novel

approach to understanding the puzzle of nuclear proliferation by examining how leaders beliefs and perceptions about the international system influence states decisions to acquire nuclear weapons Today there is a persisting dilemma over the spread of nuclear weapons for both practitioners and scholars of international affairs Uncertainty remains whether determined proliferators can be stopped as shown by the cases of North Korea and Iran These instances of proliferation raise questions about regional stability the use of pre emptive military action and the potential for reactive proliferation by neighbouring countries Despite the serious implications surrounding the spread of these weapons proliferation scholarship has thus far failed to solve what has been described as the proliferation puzzle why do some countries choose nuclear weapons while others do not The author argues that understanding basic psychological motivations such as the role of power and perceptions of self and others forms a strategic context which provides answers about a leader s willingness to proliferate Proliferation willingness is a critical yet frequently overlooked part of the proliferation equation Ultimately it is the combination of willingness and proliferation opportunity i e technical and scientific capabilities that determines whether a country goes nuclear By examining several historical instances of proliferation decision making in South Africa India Libya and Australia the book s findings highlight the fundamental role of leaders beliefs in shaping proliferation outcomes This book will be of much interest to students of nuclear proliferation political psychology security studies and IR in general
