Young Chemists and Great Discoveries James Kendall, 1969 Safeguarding Democratic Capitalism gathers together decades of writing by Melvyn Leffler one of the most respected historians of American foreign policy to address important questions about U S national security policy from the end of World War I to the global war on terror Why did the United States withdraw strategically from Europe after World War I and not after World War II How did World War II reshape Americans understanding of their vital interests What caused the United States to achieve victory in the long Cold War To what extent did 9 11 transform U S national security policy Is budgetary austerity a fundamental threat to U S national interests Leffler s wide ranging essays explain how foreign policy evolved into national security policy He stresses the competing priorities that forced policymakers to make agonizing trade offs and illuminates the travails of the policymaking process itself While assessing the course of U S national security policy he also interrogates the evolution of his own scholarship Over time slowly and almost unconsciously Leffler s work has married elements of revisionism with realism to form a unique synthesis that uses threat perception as a lens to understand how and why policymakers reconcile the pressures emanating from external dangers and internal priorities An account of the development of U S national security policy by one of its most influential thinkers Safeguarding Democratic Capitalism includes a substantial new introduction from the author Provided by publisher

Anna Atkins Corey Keller, 2025-10-21 Learn about the life of

Anna Atkins the pioneering photographer who combined art and science to create the first photographically illustrated book *Step into the world of Anna Atkins 1799 1871* perhaps the world's first female photographer and a pioneer of the medium. She lived an existence full of heartache and triumph from her mother's death when Atkins was an infant to her publication of multiple photographic books as an adult. After the passing of her mother Atkins was raised primarily by her father and grandfather who placed an emphasis on both her emotional and intellectual growth. As a result she spent her life surrounded by some of the brightest minds of the day while they experimented in her family's lab. Thanks to familial support and her own innate curiosity Atkins felt empowered to pursue her passion for the natural world alongside several of the greatest inventors of Victorian England during the Industrial Revolution. Despite societal gender norms of the era which typically limited women to a life within the home Atkins gained the respect of the scientific community with her ambitious multivolume album *Photographs of British Algae Cyanotype Impressions* now recognized as the world's first photographically illustrated book. Her cyanotypes in addition to their scientific accuracy added a sense of artistic beauty to her publications setting the stage for new uses of this already experimental technology. In an era replete with state of the art inventions and innovative ideas Atkins pushed photography forward in its earliest days with courage creativity and brilliance. *Experiment, Theory, Practice* P.L. Kapitza, 2012-12-06. In this splendid collection of the articles and addresses of P. L. Kapitza the author remarks on the insight of the 18th century Ukrainian philosopher Skovoroda who wrote "We must be grateful to God that He created the world in such a way that everything simple is true and everything complicated is untrue." At another place Kapitza meditates on the roles played by instinct imagination audacity experiment and hard work in the development of science and for a moment seems to despair at understanding the dogged arguments of great scientists. Einstein loved to refer to God when there was no more sensible argument. With Academician Kapitza there are reasoned arguments plausible alternative natives humor and humane discipline energy and patience a skill for the practical and transcendent clarity about what is at issue in theoretical practice as in engineering necessities. Kapitza has been physicist engineer research manager teacher humanist and this book demonstrates that he is a wise interpreter of historical philosophical and social realities. He is also in C. P. Snow's words strong brave and good. *Variety of Men* N. Y. 1966 p. 19. In this preface we shall point to themes from Kapitza's interpretations of science and life. On scientific work "Good work is never done with someone else's hands. The separation of theory from experience from experimental work and from practice above all harms theory itself." *Exploring Chemical Analysis* Daniel C. Harris, 2005. *Exploring Chemical Analysis* teaches students how to understand analytical results and how to use quantitative manipulations preparing them for the problems they will encounter. *Standard Catalog for High School Libraries. Supplement*, 1955. *The Experimental Self* Jan Golinski, 2016-05-11. What did it mean to be a scientist before the profession itself existed? Jan Golinski finds an answer in the remarkable career of Humphry Davy the foremost chemist of his day and one of the most distinguished British men of science of the nineteenth century. Originally a country boy from a

modest background Davy was propelled by his scientific accomplishments to a knighthood and the presidency of the Royal Society An enigmatic figure to his contemporaries Davy has continued to elude the efforts of biographers to classify him poet friend to Coleridge and Wordsworth author of travel narratives and a book on fishing chemist and inventor of the miners safety lamp What are we to make of such a man In *The Experimental Self* Golinski argues that Davy s life is best understood as a prolonged process of self experimentation He follows Davy from his youthful enthusiasm for physiological experiment through his self fashioning as a man of science in a period when the path to a scientific career was not as well trodden as it is today What emerges is a portrait of Davy as a creative fashioner of his own identity through a lifelong series of experiments in selfhood
