Great Reefs Of The World:

The Great Barrier Reef Charles River Charles River Editors, 2017-01-26 Includes pictures Includes accounts of the reef and animals written by explorers Includes a bibliography for further reading Includes a table of contents Coral is a very beautiful and unusual animal Each coral head consists of thousand of individual polyps These polyps are continually budding and branching into genetically identical neighbors Antony Garrett List People have always loved to build things whether it s a feat of engineering in an underground subway or the construction of the world s tallest skyscraper Thus it s somewhat ironic that the largest structure ever built was not made by humans but by incredibly tiny organisms known as coral polyps Over the course of tens of thousands of years these small organisms have put together a collection of nearly 3 000 reefs that form a collective stretching across 130 000 square miles It is often mistakenly claimed that the Great Wall of China can be seen in space but it s absolutely true that the enormous Great Barrier Reef is visible The sheer size of the Great Barrier Reef is mind boggling but its importance extends far past its physical extent Put simply the Great Barrier Reef is one of the most beautiful spots on the planet offering kaleidoscopic colors thanks to the coral and the species that call it home This is understandable because a staggering number of species inhabit the Great Barrier Reef ranging from starfish and turtles to alligators and birds Scientists have counted about 1 500 different fish species using the reef and it s estimated that even 1 5 million birds use the site In designating it a World Heritage Site UNESCO wrote of the Great Barrier Reef The Great Barrier Reef is a site of remarkable variety and beauty on the north east coast of Australia It contains the world s largest collection of coral reefs with 400 types of coral 1 500 species of fish and 4 000 types of mollusc It also holds great scientific interest as the habitat of species such as the dugong sea cow and the large green turtle which are threatened with extinction Unfortunately an ecosystem as complex as the Great Barrier Reef is also vulnerable to a host of threats whether it s fishing oil spills or climate change J E N Veron former chief scientist of the Australian Institute of Marine Science described watching how coral was affected during what s known as a mass bleaching event And then I saw a whammy a mass bleaching event where everything turns white and dies Sometimes it s only the fast growing branching corals but some of the others are horrible to see corals that are four five six hundred years old they die too It s real day in day out and I work on this day in day out It s like seeing a house on fire in slow motion There s a fire to end all fires and you re watching it in slow motion and you have been for years In fact scientists fear that the Great Barrier Reef has lost most of its coral cover in the last 30 years which poses a danger to the species that inhabit it some of which are already endangered The Great Barrier Reef The History of the World s Largest Coral Reef looks at the history of the reef and describes it in vivid detail Along with pictures of important people places and events you will learn about the Great Barrier Reef like never before in no time at all Greatest Wonders Of The World VIKAS KHATRI, 2012-11-15 The earth is indeed an extraordinary planet and not just because of the infinite variety of life that it supports the land itself is fabricated marvelously with wonders that possess inherent capacity to attract and allure people

throughout the ages The wonders of the world that are discussed in the book have been the subject of many books over the centuries but our aim is to present something much more enlightening stimulating and engaging than straightforward description v publishers
