1994 Prentice-Hall Staff,1993 **Wetlands Ecology** Susanta Kumar Chakraborty,Poulomi Sanyal,Ratnadeep Ray,2023-03-11 This book discusses current knowledge and challenges with the ecological management and conservation of wetlands with a focus on the East Kolkata Wetlands of India This area is referred to as a Ramsar Site a designation given to areas with special protection statuses since it is the largest natural waste recycling system in the world The site faces many threats to its biodiversity and ecosystem functioning due to anthropogenic activity in the region and therefore an assessment of the ecosystem services bio ecological uniqueness and issues stemming from climate change and human impacts is needed to develop protection strategies for the future ecological functioning and sustainability of the wetlands The authors use GIS and remote sensing techniques to assess and monitor harmful industrial and environmental impacts on the wetlands and to inform mitigation and conservation strategies in the face of ongoing threats such as pollution habitat destruction and bioinvasion The book also highlights various social and economic aspects tied to the functioning and management of the wetlands along with ecological biological and physio chemical considerations The study will be of use to students and researchers in aquatic ecology biodiversity and environmental sustainability and conservation as well as to environmental planners engineers and policymakers **Socio-economic and Eco-biological Dimensions in Resource use and Conservation** Niranjana Roy,Shubhadeep Roychoudhury,Sunil Nautiyal,Sunil K. Agarwal,Sangeeta Baksi,2020-01-27 This book presents the outcomes of the 2017 national workshop and international conference organized by CEENR of ISEC Bengaluru and Assam University Silchar Addressing the threats to biodiversity and sustainable development resulting from the impacts of human induced pressures on ecosystems and global warming driven climate change is a major challenge It requires increased knowledge and an enhanced information base in order to devise local policies to improve the adaptive capacity of vulnerable socio ecological systems in developing countries In this context the book presents research that has the potential to benefit the environment and empower communities It appeals to researchers investigating diverse aspects of socio ecological biological systems to create strategies for resource use conservation and management to ensure sustainability Hyperspectral Remote Sensing of Tropical and Sub-Tropical Forests Margaret Kalacska,G. Arturo Sanchez-Azofeifa,2008-02-26 While frequently used in temperate environments hyperspectral sensors and data are still a novelty in the tropics Exploring the potential of hyperspectral remote sensing for assessing ecosystem characteristics Hyperspectral Remote Sensing of Tropical and Sub Tropical Forests focuses on the complex and unique set of challenges involved in using t **Insect Populations In theory and in practice** Jack P. Dempster,Ian F.G. McLean,2012-12-06 Insects are by far the largest group of animals on Earth with over a million described species and they occupy a wide range of ecological niches they may be herbivores predators parasites or decomposers Some are of particular economic importance as pests of agriculture and forestry as vectors of animal and human disease or as species of interest to wildlife conservation Thus an understanding of the processes determining their numbers is of considerable practical value Entomologists have

played a leading role in developing a theoretical basis to Population Ecology but we still do not have adequate experimental and observational proof for many of the theoretical ideas that have been proposed As a result the subject has been beset with arguments for more than 50 years This volume attempts to reconcile some of these controversies while also reviewing the current state of our knowledge The editors have drawn together an international list of contributors whose views reflect a range of opinions on how natural populations are stabilised They have succeeded in producing a book that both covers the main alternative views in population theory and contains some of the best recent field studies of insect populations This Royal Entomological Society Symposium volume will be of great interest to all entomologists and ecologists particularly those who wish to know more about Population Dynamics

The World's Protected Areas Stuart Chape, Mark Spalding, Martin Jenkins, 2008 Illustrated with maps color photographs and graphics this reference offers a comprehensive status report on the world's 60 000 parks nature reserves and other land and marine areas designated as protected areas It offers an overview of what these protected areas have and have not accomplished and what threats they face Provided by publisher

Species Richness Jonathan Adams, 2010-02-26 This is a readable informative and up to date account of the patterns and controls on biodiversity The author describes major trends in species richness along with uncertainties in current knowledge The various possible explanations for past and present species patterns are discussed and explained in an even handed and accessible way The implications of global climate change and habitat loss are considered along with current strategies for preserving what we have This book examines the state of current understanding of species richness patterns and their explanations As well as the present day world it deals with diversification and extinction in the conservation of species richness and the difficulties of assessing how many species remain to be discovered The scientifically compelling subject of vegetation climate interaction is considered in depth Written in an accessible style the author offers an up to date rigorous and yet eminently comprehensible overview of the ecology and biogeography of species richness He departs from the often heavy approach of earlier texts without sacrificing rigor and depth of information and analysis Prefacing with the aims of the book Chapter 1 opens with an explanation of latitudinal gradients including a description of major features of the striking gradients in species richness

exceptions to the rule explanations major theories and field and experimental tests The following chapter plumbs the depth of time including the nature of the fossil record broad timescale diversity patterns ecosystem changes during mass extinctions and glaciations and their influence on species richness Chapters 3 and 4 consider hotspots and local scale patterns in species richness while Chapter 5 looks at the limitations and uncertainties on current estimates of richness the last frontiers of species diversity and the process of identifying new life forms The last three chapters cover humans and extinctions in history and prehistory current habitat and global change including the greenhouse effect and the race to preserve what we still have including parks gene banks and laws **Biogeography** C. Barry Cox, Peter D. Moore, 2010-05-10

Biologists searching for a resource that explores all of the exciting changes that have occurred recently in the field will turn to this eighth edition It offers insight into the multidisciplinary nature of the field presenting a sound historical base up to date coverage and a look at the latest controversies The authors evaluate conflicting theories and provide a reasoned judgment as to which is preferable In a new chapter the authors examine marine biogeography so that biologists can compare and analyze the data patterns and problems arising from continental marine and island biogeography

Conservation Biogeography Richard J. Ladle, Robert J. Whittaker, 2011-01-11 CONSERVATION BIOGEOGRAPHY The Earth's ecosystems are in the midst of an unprecedented period of change as a result of human action Many habitats have been completely destroyed or divided into tiny fragments others have been transformed through the introduction of new species or the extinction of native plants and animals while anthropogenic climate change now threatens to completely redraw the geographic map of life on this planet The urgent need to understand and prescribe solutions to this complicated and interlinked set of pressing conservation issues has led to the transformation of the venerable academic discipline of biogeography the study of the geographic distribution of animals and plants The newly emerged sub discipline of conservation biogeography uses the conceptual tools and methods of biogeography to address real world conservation problems and to provide predictions about the fate of key species and ecosystems over the next century This book provides the first comprehensive review of the field in a series of closely interlinked chapters addressing the central issues within this exciting and important subject *Parasite Biodiversity* Robert Poulin, Serge Morand, 2014-05-27 This comprehensive

groundbreaking book on the biodiversity of parasites offers a clear and accessible explanation of how parasite biodiversity provides insight into the history and biogeography of other organisms the structure of ecosystems and the processes that lead to the diversification of life World Atlas of Biodiversity Brian Groombridge, Martin Jenkins, 2002 Global biological diversity ecosystem diversity
