Luken, John W. Thieret, 2012-12-06 Biological invasion of native plant communities is a high priority problem in the field of environmental management Resource managers biologists and all those involved in plant communities must consider ecological interactions when assessing both the effects of plant invasion and the long term effects of management Sections of the book cover human perceptions of invading plants assessment of ecological interactions direct management and regulation and advocacy It also includes an appendix with descriptive data for many of the worst weeds *Biological Invasions in South Africa* Brian W van Wilgen, John Measey, David M Richardson, 2020-10-09 This open access volume presents a comprehensive account of all aspects of biological invasions in South Africa where research has been conducted over more than three decades and where bold initiatives have been implemented in attempts to control invasions and to reduce their ecological economic and social effects It covers a broad range of themes including history policy development and implementation the status of invasions of animals and plants in terrestrial marine and freshwater environments the development of a robust ecological theory around biological invasions the effectiveness of management interventions and scenarios for the future The South African situation stands out because of the remarkable diversity of the country and the wide range of problems encountered in its varied ecosystems which has resulted in a disproportionate investment into both research and management The South African experience holds many lessons for other parts of the world and this book should be of immense value to researchers students managers and policy makers who deal with biological invasions and ecosystem management and conservation in most other regions This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use All rights not granted by the work s license are retained by the author or authors **Wattles** David M. Richardson, Johannes J. Le Roux, Elizabete Marchante, 2023-11-13 The book provides a comprehensive overview of current knowledge about wattles a large clade of over 1000 species of trees and shrubs in the genus *Acacia* most of which are native to Australia It examines the biology ecology evolution and biogeography of wattles in their native ranges including the evolutionary forces that have driven past speciation and adaptation to diverse environments the conservation status uses and human perceptions of these species It considers the

different histories of the introductions and proliferation of wattles as alien species in different parts of the world since c 1850 the Anthropocene situated within relevant political socio economic and scientific contexts together with an analysis of how awareness of their impacts as invasive species has changed over time Differences in the dynamics and trends associated with the introduction naturalization and invasion of wattles in different parts of the world are reviewed The book also synthesizes the global distribution of wattles using diverse data sources alongside trends patterns and projections of global uses of wattles It discusses the genetics biotic interactions and ecological economic and social impacts of invasive wattles This book is aimed at academics and students in the field of ecology and at managers of natural and anthropic ecosystems policy makers and regulators and the general public interested in biology and environmental science *The Ecology and Management of Biological Invasions in Southern Africa* I. A. W. Macdonald, Frederick J. Kruger, Antony A. Ferrar, 1986 Based on a symposium held by the South African National Programme for Ecosystem Research this book has been compiled in response to the increasing realization worldwide but notably in South Africa that introduced species pose a true ecological and economic threat to agricultural and conservation activities The authors review current knowledge and management practice in response to the invasive spread of introduced species in South Africa and focus on the study of species which have invaded non agricultural regions thereby disrupting natural ecosystem processes The ecological processes involved are described as are basic principles of management of invasive species in protected ecosystems and grazing lands Using case studies to demonstrate timing location rate extent of spread mode and motivation of introduction impact and control strategies for a variety of South African species this unique work offers helpful guidelines for management and ecological understanding that can be applied internationally *Ecosystems of Disturbed Ground* L.R. Walker, 1999-12-17 As the human population inexorably grows its cumulative impact on the Earth's resources is hard to ignore The ability of the Earth to support more humans is dependent on the ability of humans to manage natural resources wisely Because disturbance alters resource levels effective management requires understanding of the ecology of disturbance This book is the first to take a global approach to the description of both natural and anthropogenic disturbance regimes that physically impact the ground Natural disturbances such as erosion volcanoes wind herbivory flooding and drought plus anthropogenic disturbances such as forestry grazing mining urbanization and military actions are considered Both disturbance impacts and the biotic recovery are addressed as well as the interactions of different types of disturbance Other chapters cover processes that are important to the understanding of disturbance of all types including soil processes nutrient cycles primary productivity succession animal behaviour and competition Humans react to disturbances by avoiding exacerbating or restoring them or by passing environmental legislation All of these issues are covered in this book Managers need better predictive models and robust data collections that help determine both site specific and generalized responses to disturbance Multiple disturbances have a complex effect on both physical and biotic processes as they interact This book provides a wealth of detail about the process

of disturbance and recovery as well as a synthesis of the current state of knowledge about disturbance theory with extensive documentation

The Karoo W. Richard J. Dean, Suzanne Milton, 1999-06-24 The succulent and Nama karoo form part of the arid south western zone of Africa a vast region of rugged landscapes and low treeless vegetation Studies of this unique biome have yielded fascinating insights into the ecology of its flora and fauna This book originally published in 1999 is the first to synthesise these studies presenting information on biogeographic patterns and life processes form and function of animals and plants foraging ecology landscape level dynamics and anthropogenic influences Detailed analyses of the factors distinguishing the biota of the Karoo from that of other temperate deserts are given and generalisations about semi arid ecosystems challenged The ideas expounded the ecological principles reviewed and the results presented are relevant to all those working in the extensive arid and semi arid regions of the world
