**Ecology and Reclamation of Devastated Land** Advanced Study Institute on the Ecology and Revegetation of Drastically Disturbed Areas,1973    Bibliography of Agriculture ,1974    The Biosphere, Problems and Solutions,2011-09-22 The Biosphere Problems and Solutions    **Reclaimed Land** Martin J. Haigh,2000-01-01 This text is the first in a series that sets out to highlight work being done to restore land damaged by human activity and to minimize further damage Each volume explores a land management problem from a scientific perspective This work investigates surface coal mining and its effects    Ecology and Reclamation of Devastated Land, Volume 1 Russeu J Hutnik,Grant Davis,1973    **A Guide for Enhancement of Fish and Wildlife on Abandoned Mine Lands in the Eastern United States** Jack R. Nawrot,Alan Woolf,Willard D. Klimstra,1982    *Applied Population Biology* S.K. Jain,L.W. Botsford,2007-07-23 An increasing variety of biological problems involving resource management conservation and environmental quality have been dealt with using the principles of population biology defined to include population dynamics genetics and certain aspects of community ecology There appears to be a mixed record of successes and failures and almost no critical synthesis or reviews that have attempted to discuss the reasons and ways in which population biology with its remarkable theoretical as well as experimental advances could find more useful application in agriculture forestry fishery medicine and resource and environmental management This book provides examples of state of the art applications by a distinguished group of researchers in several fields The diversity of topics richly illustrates the scientific and economic breadth of their discussions as well as epistemological and comparative analyses by the authors and editors Several principles and common themes are emphasized and both strengths and potential sources of uncertainty in applications are discussed This volume will hopefully stimulate new interdisciplinary avenues of problem solving research    *A Review of Uranium Spoils and Mill Tailings Revegetation in the Western United States* Teruo Yamamoto,1982    **General Technical Report RM. ,1981**    **Soil Health Restoration and Management** Ram Swaroop Meena,2019-08-23 Meeting the food requirements of an ever increasing population is a pressing challenge for every country around the globe Soil degradation has a negative impact on food security by reducing the cultivated land areas while at the same time the world population is predicted to increase to 9.2 billion in 2050 Soil degradation adversely affects soil function and productivity and degraded soils now amount to 6 billion ha worldwide The major factors are salinization erosion depletion of nutrients due to exhaustive agricultural practices and contamination with toxic metal ions and agrochemicals which reduces the activity of soil microbe In addition poor soil management also decreases fertility As such measures are required to restore the soil health and productivity organic matter beneficial microorganisms and nutrient dynamics can all improve the physical chemical and biological properties of soil Understanding the role of soil health restoration and management in sustainability and nutritional security calls for a holistic approach to assess soil functions and examine the contributions of a particular management system within a defined timescale Further best management practices in cropping

systems are important in ensuring sustainability and food and nutritional security without compromising the soil quality and productivity potential Rational soil management practices must allow environmentally and economically sustainable yields and restoration of soil health   **Remediation of Uranium Mill Tailings** Prafulla Soni,2023-07-31 This book covers issues pertaining to uranium tailings with special reference to consolidation of radioactivity including systematic ecological strategy for consolidation of radionuclides in uranium tailings It discusses sustainable consolidation of radioactivity and checks the migration of unextracted uranium from tailing piles to plants and atmosphere supported by a case study from a uranium mine It provides simple ecological solutions for the remediation of radioactivity in mill tailings Features Provides insight into the application of applied ecology for bioremediation of radioactive wastes Discusses species selection criteria for tailings radioactivity consolidation Explains safe treatment of the tailings of radioactive ore processing plants Illustrates the role of ethnobotany in the selection of the most appropriate species to effectively use in bioremediation Focuses on experimental outcomes This book is aimed at researchers and professionals in mining engineering applied geology nuclear tailings and environmental protection   **FWS/OBS.** ,1976   *Surface mining and fish/wildlife needs in the Eastern United States* ,1979
