Extraordinary Cities Peter J. Taylor, 2013-01-01 Peter J Taylor has produced a sweeping empirically grounded defense of cities as fundamental building blocks of long term large scale social structures a way of freeing social science from state centric bias and indeed mankind s hope However the single greatest strength of this complex seductive argument is the insistence on treating cities relationally as process Here the key to understanding the significance of cities is by studying them in terms of the dynamic networks they form and in their relations to states Richard E Lee Binghamton University US The founding father of the famous Globalization and World Cities research network and think tank on worldwide links between cities presents this fascinating overview on cities in geohistory By moving cities to the centre stage Peter Taylor proposes that concern for states tell only part of the macro social story of humanity Cities have been and are the engines of innovation This impressive new book provides new insights into why cities succeed or fail The book is in the class with broadminded presentations like Jared Diamond s book Guns Germs and Steel Christian Matthiessen University of Copenhagen Denmark and President International Geographical Union s Commission on Urban Geography This is a big book by Peter Taylor It tells of the extraordinary world making powers of cities across the ages it explains why a state centric social science has constrained recognition of these powers over the last two centuries and it outlines a new indisciplinary to help us make sense of a human condition increasingly forged out of the urban Anyone troubled by the social sciences as we know them ought to read this book Ash Amin Cambridge University UK and author Land of Strangers Accepting that cities are extraordinary this book provides an original city centred narrative of human creativity past present and future In this innovative ambitious and wide ranging book Peter Taylor demonstrates that cities are the epicenters of human advancement In exploring cities as sites through which economies flourish by harnessing the creative potential of myriad communication networks the author considers cities from varying temporal and spatial perspectives Four stories of cities are told the origins of city networks the domination of cities by world empires the genesis of a singular modern creative interval in which innovation culminates in today s globalised cities and finally the need for cities to act as centres for human creativity to produce a more resilient global society in the current crisis century Providing a long term view through which to consider the role of cities in attending to incipient crises of the twenty first century this

closely argued thesis will prove essential for students and scholars of urban studies geography and sociology and all with a professional interest in or personal fascination for cities *Reclaiming Development in the World Trading System* Yong-Shik Lee, 2016-10-20 In this second edition Lee provides extensive coverage of international trade law from an economic development perspective

Latin America vs East Asia: A Comparative Development Perspective Jingyuan Lin, 2019-07-25 This study makes a solid case for the now prevalent contention that the development model of East Asian NICs is less costly i.e. over inflation levels and more equitable income distribution more adaptive to fluctuating world market conditions e.g. successful adjustment to the two oil crises and more sustainable i.e. high growth rates even in the turbulent 1970s than that of the Latin American NICs In considering these issues this book examines the major Latin American countries economic problems and development experiences in light of the more successful stabilization and development experiences of the East Asian countries Taiwan and South Korea in particular
