Water Resources and Agricultural Development in the Tropics Christopher J. Barrow, 2016-07-01 First published in 1988 There are many excellent texts on water supply and irrigation engineering irrigation economics agricultural development and the problems which often plague such efforts Few syntheses of such writings have been made despite a clear need for them from people interested in water resources and agricultural development students of geography economics development studies and agricultural management administrators planners and aid agency staff This book attempts to provide a broad interdisciplinary introduction for such people *Third World Political Ecology* Sinead Bailey, Raymond Bryant, 2005-08-08 An effective response to contemporary environmental problems demands an approach that integrates political economic and ecological issues Third World Political Ecology provides an introduction to an exciting new research field that aims to develop an integrated understanding of the political economy of environmental change in the Third World The authors review the historical development of the field explain what is distinctive about Third World political ecology and suggest areas for future development Clarifying the essentially politicised condition of environmental change

today the authors explore the role of various actors states multilateral institutions businesses environmental non governmental organisations poverty stricken farmers shifting cultivators and other grassroots actors in the development of the Third World s politicised environment Third World Political Ecology is the first major attempt to explain the development and characteristics of environmental problems that plague parts of Asia Africa and Latin America Drawing on examples from throughout the Third World the book will be of interest to all those who wish to understand the political and economic bases of the Third World s current predicament **Aquaculture Development In Less Developed Countries** Leah

Smith,2019-03-01 Aquaculture may not be the panacea for the world s food problems but It has the potential to make important contributions to diet and incomes in some areas This book intended to improve planning for further development of aquaculture examines the factors that can determine the success or failure of aquaculture projects in developing countries

Between Two Worlds Lynton Keith Caldwell,1992-01-23 The focus of this book is on changes in the human situation wrought by unprecedented changes in science based technology and expanding populations Increasing scientific information concerning these changes and their consequences is beginning to alter people s perceptions thus providing a rational basis for a worldwide environmental movement This movement complex and differentiated works through political and educational means to establish new social priorities consistent with scientific findings and the sustainability of life on Earth The success of this effort would signify a new phase of social development The thesis of this book is that human made changes in the condition of the Earth accompanied by the changing attitudes and values implicit in the environmental movement constitute an historical discontinuity The present era represents a transition between the assumptions and conditions that have hitherto characterized the modern world and those of the post modern world that is emerging Science and technology so vividly symbolized in the view from outer space are fundamentally changing our traditional beliefs about human opportunities and limitations and these changes are slowly being reflected in international policies and laws If humanity today succeeds in establishing a sustainable relationship to Earth a higher level of civilisation will have been achieved This thought provoking view will interest students and professionals in the science and politics of the environment *The International Politics of Surplus Capacity (Routledge Revivals)* Susan Strange,Roger Tooze,2009-11-02 This important survey first published in 1981 presents some different and often contending perceptions of the problem of surplus capacity as it re emerged in the world of the 1980s an economic climate with many parallels to the current era Susan Strange and Roger Tooze deliberately assembled writers of many different nationalities professional backgrounds and ideological convictions and asked them to make the case for their version of the problem Some even doubt if there really is much of a problem at all Others see it as fundamentally political or monetary as inherent in the capitalist system or as the product of short sighted pressure groups and perverse politicians To help readers judge for themselves there are specialist contributions on surplus capacity as it has shown up in different sectors of the world economy shipbuilding textiles steel petrochemicals insurance and banking and on the responses

of different actors in the international system including the European Community and multinational corporations *Toward A Just World Order* Richard Falk, 2019-03-22 This text is designed to provide students with a solid theoretical and methodological base for understanding how the present international system works how that system is likely to evolve given current world trends and what realistically can be done to alleviate the most serious global problems Part 1 develops a world order perspective by examining **Community Participation and Sustainable Forest Development** Ajoy Kumar Bhattacharya, 2001 Palgrave Advances in International Environmental Politics M. Betsill, K. Hochstetler, D. Stevis, 2005-10-31 Palgrave Advances in International Environmental Politics provides a state of the art review of the major theoretical approaches and substantive debates of the field The first section reviews the historical development of international environmental politics as well as the theoretical and methodological approaches used in its study The following chapters each review the trajectory of a key research area within international environmental politics and elaborate on current approaches and debates Case studies in each chapter illuminate the main theoretical questions that emerge from the review Unesco and Social Sciences S. P. Agrawal, J. C. Aggarwal, 1988 The Right Kind of Revolution Michael E. Latham, 2011-01-15 After World War II a powerful conviction took hold among American intellectuals and policymakers that the United States could profoundly accelerate and ultimately direct the development of the decolonizing world serving as a modernizing force around the globe By accelerating economic growth promoting agricultural expansion and encouraging the rise of enlightened elites they hoped to link development with security preventing revolutions and rapidly creating liberal capitalist states In The Right Kind of Revolution Michael E Latham explores the role of modernization and development in U S foreign policy from the early Cold War through the present The modernization project rarely went as its architects anticipated Nationalist leaders in postcolonial states such as India Ghana and Egypt pursued their own independent visions of development Attempts to promote technological solutions to development problems also created unintended consequences by increasing inequality damaging the environment and supporting coercive social policies In countries such as Guatemala South Vietnam and Iran U S officials and policymakers turned to modernization as a means of counterinsurgency and control ultimately shoring up dictatorial regimes and exacerbating the very revolutionary dangers they wished to resolve Those failures contributed to a growing challenge to modernization theory in the late 1960s and 1970s Since the end of the Cold War the faith in modernization as a panacea has reemerged The idea of a global New Deal however has been replaced by a neoliberal emphasis on the power of markets to shape developing nations in benevolent ways U S policymakers have continued to insist that history has a clear universal direction but events in Iraq and Afghanistan give the lie to modernization's false hopes and appealing promises *The Challenge of Tourism Carrying Capacity Assessment* Harry Coccossis, Alexandra Mexa, 2017-03-02 Planning and management for tourism growth is becoming essential in the context of sustainable development Particularly so since many tourist destinations are facing severe pressures from tourist flows and

activities Such pressures are evidenced in terms of dysfunctions congestion environmental degradation etc which ultimately affect the attraction and competitiveness of tourism destinations The development of tourism should be considered in accordance with sustainability principles In this context respecting the capacity of the local system to sustain growth becomes a key challenge This book examines the use of various tools to define measure and evaluate tourism carrying capacity TCC a tool aiming to impose limits for entering certain tourist destinations or using certain activities Drawing on case studies from France Spain Italy Greece the UK the Netherlands Ireland Belgium Austria Germany and Finland it presents practical experiences of implementing TCC in various tourist destinations i e historic towns coastal zones islands etc It draws conclusions regarding the measurement and implementation of TCC assessment and provides further guidelines towards a comprehensive methodological framework for assessing tourism sustainability in the future
