Superintendent of Documents,1987 **Fish and Wildlife Research** ,1986 **The Natural Communities of Georgia** Leslie Edwards,Jonathan Ambrose,L. Katherine Kirkman,2013-02-01 The Natural Communities of Georgia presents a comprehensive overview of the state s natural landscapes providing an ecological context to enhance understanding of this region s natural history Georgia boasts an impressive range of natural communities assemblages of interacting species that have either been minimally impacted by modern human activities or have successfully recovered from them This guide makes the case that identifying these distinctive communities and the factors that determine their distribution are central to understanding Georgia s ecological diversity and the steps necessary for its conservation Within Georgia s five major ecoregions the editors identify and describe a total of sixty six natural communities such as the expansive salt marshes of the barrier islands in the Maritime ecoregion the fire driven longleaf pine woodlands of the Coastal Plain the beautiful granite outcrops of the Piedmont the rare prairies of the Ridge and Valley and the diverse coves of the Blue Ridge With contributions from scientists who have managed researched and written about Georgia landscapes for decades the guide features more than four hundred color photographs that reveal the stunning natural beauty and diversity of the state The book also explores conservation issues including rare or declining species current and future threats to specific areas and research needs and provides land management strategies for preserving restoring and maintaining biotic communities The Natural Communities of Georgia is an essential reference for ecologists and other scientists as well as a rich resource for Georgians interested in the region s natural heritage *Salt Marshes* Duncan M. FitzGerald,Zoe J. Hughes,2021-04-22 Salt marshes are highly

dynamic and important ecosystems that dampen impacts of coastal storms and are an integral part of tidal wetland systems which sequester half of all global marine carbon. They are now being threatened due to sea level rise, decreased sediment influx, and human encroachment. This book provides a comprehensive review of the latest salt marsh science investigating their functions and how they are responding to stresses through formation of salt pannes and pools, headward erosion of tidal creeks, marsh edge erosion, ice fracturing, and ice rafted sedimentation. Written by experts in marsh ecology, coastal geomorphology, wetland biology, estuarine hydrodynamics, and coastal sedimentation, it provides a multidisciplinary summary of recent advancements in our knowledge of salt marshes. The future of wetlands and potential deterioration of salt marshes is also considered, providing a go-to reference for graduate students and researchers studying these coastal systems as well as marsh managers and restoration scientists.

Water Resources Research Catalog, 1966 The Development of an Aquatic Habitat Classification System for Lakes W.D.N. Busch, 2018-01-18

In the context of freshwater fisheries changing their strategies from the regulation of harvest and the enhancement of populations to the creation and protection of habitats and the management of ecosystems, moves toward establishing an aquatic habitat classification system. Eight papers from the February 1988 Symposium on the Classification and Inventory of Great Lakes Aquatic Habitats, the last in a series of Great Lakes Symposia, propose various classification approaches, most using a limited number of physical, chemical, and/or biological variables to produce some form of index. They also include overviews and summaries of the classification process.

Human Impacts on Salt Marshes Brian R. Silliman, Edwin D. Grosholz, Mark D. Bertness, 2009-06-03

Human Impacts on Salt Marshes provides an excellent global synthesis of an important underappreciated environmental problem and suggests solutions to the diverse threats affecting salt marshes.

Peter B. Moyle, University of California, Davis **Restoration of Ecosystems - Bridging Nature and Humans** Stefan Zerbe, 2023-02-13

In this interdisciplinary textbook, which bridges the gap between the natural and social sciences, both the scientific principles of restoration ecology and practical aspects of ecosystem restoration are comprehensively presented. The diversity of land use types, with a focus on Central Europe, is highlighted, and case studies of practical restoration projects are presented. The textbook offers students who deal with the environment as well as scientists and practitioners a profound and up-to-date but also critical overview of the state of knowledge. This book opens up the broad spectrum of degraded ecosystems of Central European natural and cultural landscapes. In further chapters, marine ecosystems and their restoration, as well as development potentials and the limits of restoration, are discussed in more detail. The ecological fundamentals are expanded through an interdisciplinary perspective, taking into account environmental ethics, sociology, anthropology, and economics. In addition to an up-to-date overview of the various areas and fields of activity in restoration ecology and ecosystem restoration, the textbook provides a valuable basis for studies in science and practice. The students also receive assistance in searching for literature and critical fact analysis, and the lecturers on teaching formats and interdisciplinary approaches to discussion in restoration ecology.

Ecophysiology of Vascular Halophytes Irwin A. Ungar, 2023-06-14 Ecophysiology of Vascular Halophytes provides a useful update to existing literature describing the ecophysiological responses of vascular halophytes to environmental stresses present in saline habitats The success of species growing in these extreme environments is related to a number of adaptations including the timing of phenological events phenotypic plasticity and genetic selection for specific ecophysiological responses at different stages of development Factors discussed that influence the growth and distribution of halophytes include seed germination salinity stress salt stimulation flooding ion content nitrogen plant water status growth regulators photosynthesis and genecology The book also discusses the effects of both interspecific and intraspecific competition on the growth and survival of halophytes Researchers and students of stress ecology as well as agricultural research organizations will find a tremendous store of information in this volume
