integrated value chain which can have links with the farmers As technology is outmoded these units are not in a position to give quality assurance and meet food safety standards Their products are marketed only in less demanding nearby local markets World over there is transition from informal and small agro industrial enterprises to large units which are competitive in terms of price and quality equitable not exploiting any member of value chain and inclusive treating farmers as strategic business partners rather than adversaries They use latest and innovative technology and have national and international markets for selling their products They enjoy scale economies are able to comply with national and international standards of quality assurance and go for higher level of value addition They can forge linkages with the farmers through contract farming and direct procurement and assure their raw material supply by treating the farmers as strategic business partners But these enterprises require the enabling conditions which make it possible to run the enterprises profitably along with transformation of rural areas Over the years the Government of India and nearly all the State Governments have now created most attractive enabling environment Therefore in our assessment India is poised for a great leap in investments in food processing and marketing The book contains 18 chapters dealing with the entire project cycle of agro industries for sustainable rural transformation The most insightful part is the 12 real life case studies The book would be useful to agro entrepreneurs agro processing industries policy makers bankers management consultants students of agriculture universities cooperative management training institutions and MBA students Cost-Benefit Analysis P. Richard G. Layard, Richard Layard, Stephen Glaister, 1994-06-30 Covering all the main problems that arise in a typical cost benefit exercise this second edition reflects the most recent research in the area It considers the main theoretical issues the problem of ascribing a monetary value to things and includes six separate case studies **Project Management in the Oil and Gas Industry** Mohamed A. El-Reedy, 2016-02-09 Oil and gas projects have special characteristics that need a different technique in project management The development of any country depends on the development of the energy reserve through investing in oil and gas projects through onshore and offshore exploration drilling and increasing facility capacities Therefore these projects need a sort of management match with their characteristics and project management is the main tool to achieving a successful project Written by a veteran project manager who has specialized in oil and gas projects for years this book focuses on using practical tools and methods that are widely and successfully used in project management for oil and gas projects Most engineers study all subjects but focus on project management in housing projects administration projects and commercial buildings or other similar projects However oil and gas projects have their own requirements and characteristics in management from the owners engineering offices and contractors side Not only useful to graduating engineers new hires and students this volume is also an invaluable addition to any veteran project manager's library as a reference or a helpful go to guide Also meant to be a refresher for practicing engineers it covers all of the project management subjects from an industrial point of view specifically for petroleum projects making it the perfect desktop
