Economics And Cognitive Science:

Cognitive Economics Paul Bourguine, 2004-01-08 The social sciences study knowing subjects and their interactions A cognitive turn based on cognitive science has the potential to enrich these sciences considerably Cognitive economics belongs within this movement of the social sciences It aims to take into account the cognitive processes of individuals in economic theory both on the level of the agent and on the level of their dynamic interactions and the resulting collective phenomena This book is a result of a three year experiment in interdisciplinary cooperation in cognitive economics It has the advantage of reflecting joint long term work between economists specialists in cognitive science physicists mathematicians and computer scientists The main aim of the book is to enable any researcher interested in cognitive economics whatever his or her original speciality to grasp essential landmarks in this emerging field Part I of the book provides disciplinary bases Part II is focused on advanced research

Economics and Cognitive Science Paul Bourguine, Bernard Walliser, 2014-06-28 Economics dealing with mental processes of decision makers is part of cognitive science conversely cognitive science faced with constraints on information processing is part of economics In July 1990 the Cechoia 2 conference was organised in Paris to further explore the connections between the two The papers presented in this volume illustrate this truly interdisciplinary research intertwining social and cognitive sciences Three main topics are represented agent s mental representation when facing complex uncertainty agent s computational constraints leading to bounded rationality agent s learning and evolution in an imperfectly known environment

Economic Theory and Cognitive Science Don Ross, 2007-01-26 In this study Don Ross explores the relationship of economics to other branches of behavioral science asking in the course of his analysis under what interpretation economics is a sound empirical science The book explores the relationships between economic theory and the theoretical foundations of related disciplines that are relevant to the day to day work of economics the cognitive and behavioral sciences It asks whether the increasingly sophisticated techniques of microeconomic analysis have revealed any deep empirical regularities whether technical improvement represents improvement in any other sense Casting Daniel Dennett and Kenneth Binmore as its intellectual heroes the book proposes a comprehensive model of economic theory that Ross argues does not supplant but recovers the core neoclassical insights and counters the caricaturish conception of neoclassicism so derided by advocates of behavioral or evolutionary economics Because he approaches his topic from the viewpoint of the philosophy of science Ross devotes one chapter to the philosophical theory and terminology on which his argument depends and another to related philosophical issues Two chapters provide the theoretical background in economics one covering developments in neoclassical microeconomics and the other treating behavioral and experimental economics and evolutionary game theory The three chapters at the heart of the argument then apply theses from the philosophy of cognitive science to foundational problems for economic theory In these chapters economists will find a genuinely new way of thinking about the implications of cognitive science for economics and cognitive scientists will find in economic behavior a

new testing site for the explanations of cognitive science

A Framework for Cognitive Economics Roger

McCain,1992-08-21 This is the first book length work to integrate the insights of cognitive science fully into economics It reviews a wide range of related work in both fields and proposes new approaches to choice theory rationality and interaction equilibrium that are consistent with the limited cognitive capacity of real human beings While joining with neoclassical economics in supporting the validity of supply and demand theory where it is literally applicable McCain challenges most neoclassical theory especially monopoly oligopoly and general equilibrium theory and welfare economics His work aims to further and unite recent notions of behavioral and social economics This important work will be of interest to behavioral social and Keynesian economists as well as other social scientists and philosophers interested in economic phenomena

Cognitive Economics Bernard Walliser,2007-10-25 Written in an informal way this book is addressed to philosophers or cognitive scientists curious of how economics deals with cognition and to graduate students in economics eager to discover how economics evolves It aims at extending the framework of game theory in order to better fit with the results of rapidly increasing laboratory experiments concerned with individual choices and collective interactions Cognition and Economics

Elisabeth Krecke,Carine Krecke,Roger Koppl,2006-12-01 Bringing together economists from various traditions such as Austrian economics evolutionary economics institutional economics law and economics neuro economics and bio economics this title examines the impact of cognitive science growth on the economics discipline Economics and Cognitive Science

Douglass C. North,1999 The neo classical approach to analyzing the performance of an economy assumes that in the face of pervasive scarcity individuals make choices reflecting a set of desires wants or preferences But valuable as this model has been for the development of an elegant body of theory it is a very imperfect tool for solving economic problems both at a moment of time but particularly over time The puzzle I seek to unravel is how do humans evolve and believe in theories in the face of uncertainty *Economics, Bounded Rationality and the Cognitive Revolution*

The late Herbert A. Simon,Massimo Egidi,Robin Lapthorn Marris,Riccardo Viale, The purpose of this book is to publish the ideas of the late Herbert Simon and sympathetic economists on the subject of bounded rationality economics cognitive science and related disciplines and to reprint some of Professor Simon s classic papers which have appeared in journals not widely read by economists Not only on account of his Nobel Prize in Economics but also because of the widespread applications of his ideas and theories it is especially valuable to readers to have a book of this kind at the present time Currently in this whole field there is increasing emphasis on computer related theory building Herbert Simon beginning from the time when microcomputers did not exist was a pioneer of this approach The book begins with an edited transcript of a colloquium held between Herbert Simon and a group of Italian economists in Italy in 1988 It continues with the reprinted Simon papers and papers by three scholars Raymond Boudon Massimo Egidi and Riccardo Viale coming from different disciplines but holding a common interest in bounded rationality and ends with a response by a sympathetic economist Robin Marris Psychologizing Economic Man

Michiru Nagatsu, 2009 This is a philosophical study of economics and cognitive psychology as sciences of human behaviour. Boundaries and interactions of the two sciences are examined with a close look at the experimental studies on judgement and decision making and on strategic interaction in games. I argue against conceptual scepticism that not only is a science of human behaviour possible but it is exemplified by both economics and psychology which have been striving to measure decision relevant psychological quantities and explain the behavioural anomalies that have emerged as a result of theoretical and empirical progress in measurement and experimentation. The dialectics of crises and responses involved in this process reveals various ways in which representations, models and experiments are employed in the laboratory. I emphasize the precision of measurement and the severity of test as important methodological values in scientific progress and argue that these values are the basis of theoretical progress. I explore alternative ways in which economic models of rational choice can be informed by psychology and argue that a successful model should incorporate empirical findings from social and cognitive psychology instead of maintaining familiar economic modelling strategies while relying on folk psychological intuitions. I propose that in addition to modelling human behaviour as utility maximization, explicitly modelling human reasoning qua cognitive process may be the key to success. I point out two metaphysical stances, mechanistic and functional, implicit in the debates over the prospect of neuroeconomics and consider their methodological implications to the study of human cognition and behaviour. I argue that it is unlikely that neuroscience will radically eliminate constructs of economic theory such as beliefs and preferences based on the observation that recent brain imaging studies of individual decision making largely presuppose constructs of cognitive psychology.

Connectionist Approaches in Economics and Management Sciences Cédric Lesage, Marie Cottrell, 2013-03-09 Since the beginning of the 1980s a lot of new approaches of biomimetic inspiration have been defined and developed for imitating the brain behavior for modeling non linear phenomenon for providing new hardware architectures for solving hard problems. They are named Neural Networks, Multilayer Perceptrons, Genetic algorithms, Cellular Automates, Self Organizing maps, Fuzzy Logic etc. They can be summarized by the word of Connectionism and consist of an interdisciplinary domain between neuroscience, cognitive science and engineering. First they were applied in computer sciences, engineering, biological models, pattern recognition, motor control, learning algorithms etc. But rapidly it appeared that these methods could be of great interest in the fields of Economics and Management Sciences. The main difficulty was the distance between researchers, the difference in the vocabulary used by the ones and the others, their basic background. The main notions used by these new techniques were not familiar to the Social and Human Sciences researchers. What are they? Four of them are now very briefly introduced but the reader will find more information in the following chapters.

Economics, Bounded Rationality and the Cognitive Revolution Herbert Alexander Simon, Massimo Egidi, Robin Laphorn Marris, 2008 The purpose of this book is to publish the ideas of the late Herbert Simon and sympathetic economists on the subject of bounded rationality economics

cognitive science and related disciplines and to reprint some of Professor Simon's classic papers which have appeared in journals not widely read by economists Economics and the Mind Barbara Montero, Mark D. White, 2007-01-24 Economics is often defined as the science of choice or human action But choice and action are essentially mental phenomena an aspect rarely mentioned in the economics discourse Choice while not always a conscious or rational process is held to involve beliefs desires intentions and arguably even free will Actions are often opposed to mere bodily movements with the former being in some sense only understandable in reference to mental processes while the latter are understandable in entirely non mental physical terms While philosophers have long concerned themselves with the connections between these concepts economists have tended to steer clear of what might appear to be an a priori debate At the same time philosophers working on these important notions have tended to not dirty their hands with the empirical real world applications in which economists are specialized This volume fills these gaps by bringing economists and philosophers of mind together to explore the intersection of their disciplines *Growth Poles of the Global Economy: Emergence, Changes and Future Perspectives* Elena G. Popkova, 2019-08-03 The book presents the best contributions from the international scientific conference Growth Poles of the Global Economy Emergence Changes and Future which was organized by the Institute of Scientific Communications Volgograd Russia together with the universities of Kyrgyzstan and various other cities in Russia The 143 papers selected focus on spatial and sectorial structures of the modern global economy according to the theory of growth poles It is intended for representatives of the academic community university and college staff developing study guides on socio humanitarian disciplines in connection with the theory of growth poles researchers and undergraduates masters and postgraduates who are interested in the recent inventions and developments in the field It is also a valuable resource for expert practitioners managing entrepreneurial structures in the existing and prospective growth poles of the global economy as well as those at international institutes that regulate growth poles The first part of the book investigates the factors and conditions affecting the emergence of the growth poles of the modern global economy The second part then discusses transformation processes in the traditional growth poles of the global economy under the influence of the technological progress The third part examines how social factors affect the formation of new growth poles of the modern global economy Lastly the fourth part offers perspectives on the future growth of the global economy on the basis of the digital economy and Industry 4.0

The Theory of the Individual in Economics John B Davis, 2003-03-20 The concept of the individual and his her motivations is a bedrock of philosophy All strands of thought at heart come down to a particular theory of the individual Economics though is guilty of taking this hugely important concept without questioning how we theorise it This superb book remedies this oversight The new approach put forward by Da

A Contemporary Comprehensive Economic Science Stefano Spalletti, Francesca Spigarelli, 2025-11-18 Covering Maffeo Pantaleoni s key areas of contribution to economics this book provides a comprehensive study of one of the foremost economic thinkers of the late 19th and early 20th centuries Called the prince of Italian economists by Piero Sraffa among others Maffeo Pantaleoni 1857 1924 was an original and innovative thinker but also bizarre and extravagant As a result he did not produce an inherently continuous and systematic work but his contributions oscillate between a shifting idealism and heterogeneous operational criteria Contrasting with the specialisation which pervades the economic sciences today rereading Pantaleoni one hundred years after his death it is clear that he excelled in pure as much as in applied economics in public economics as in statistical or historical economic studies Overall his expertise spanned fields of economics that are now considered disaggregated and distant from each other Thus the Pantaleonian spirit which was innovative and completist and could not be confined within any enclosure was lost a century ago This volume brings together a group of specialists capable of identifying the many points of contact between Pantaleoni s multiform thought and the disciplinary plurality of his economics thus providing A Complete Economic Science of which Pantaleoni would be proud The book will be of interest to economists readers in history of economic thought intellectual history Italian history more broadly and scholars with diverse profiles of interest
