Economics Beyond the Millennium Alan P. Kirman, Louis-André Gérard-Varet, 1999 **The Millennium Development Goals and Beyond** Rorden Wilkinson, David Hulme, 2013-05-07 The Millennium Development Goals MDGs have contributed to reductions in poverty and improvements in the human condition in many parts of the world since their invention in 2000 and 2001 It nonetheless remains the case that today as on all the previous days of the twenty first century almost one billion people will go hungry Debates about whether the MDGs have made a positive contribution to poverty eradication and or whether they have achieved as much as they should have done are becoming more frequent as 2015 and the end of the MDGs approaches This book highlights that active debate about what the MDGs have achieved and what that means for the crafting of a post 2015 international framework for action must become a priority The work begins by examining the global context of the goals from a variety of perspectives and moves on to focus on the region that continues to be the most impoverished and which looks likely to fall short of meeting many of the MDGs Africa Presenting both a broad overview of the issues and drawing together prestigious scholars and practitioners from a variety of fields this work provides a significant contribution to debates surrounding both global poverty and the success and future of the MDGs

Knowledge, Networks and Policy James Hopkins, 2015-05-08 The region has been used to understand and propose solutions to phenomena and problems outside the dominant spatial scale of the twentieth century the nation state Its influence can be seen in multiple social science disciplines and in public policy across the globe But how was this knowledge organised and how were its concepts transmuted into public policy This book charts the development of the academic field of Regional Studies and the application of its concepts in public policy through its learned society the Regional Studies Association In their modern form learned societies often play a complementary role to universities offering networks that operate in the spaces between and beyond universities connecting specialised academics and knowledge and making it possible for them to have impact outside the academy In contrast to the geographically tangible and popularly understood role of the university contemporary learned societies are nebulous networks that transcend barriers and whose contribution is difficult to discern However the production and dissemination of knowledge would be stunted were it not for the learned society connecting scholars through a network of publications and events This book traces the intellectual history of regional studies and regional science from the 1960s into the 2000s and the impact of the regional concept in public policy through the changing priorities of government in the UK and Europe By approaching the history through the Regional Studies Association it interrogates the role and function of the learned society model of organisation in contemporary academia and importance as a knowledge exchange vehicle for public policy influence

leading thinker on this dynamic and this book provides both an introduction to and analysis of his work and ideas Arranged in three main sections Human needs and wellbeing Development growth and sustainability and Methodology of economics the chapters in this book contribute to on going debates on issues as important as human development the limits of economic growth deep ecology sustainable consumption entrepreneurship climate change interdisciplinarity and the methodology and practice of economics The contributors to this volume provide a broad range of different critical perspectives on these issues and the chapters are arranged in dialogue with each other to provide the reader with a rounded view of the legacy of Max Neef This book is vital reading for all those interested in ecological economics environmental economics development economics methodology and philosophy of economics and heterodox economics

Environmental and Natural Resource Economics Jonathan M. Harris, Brian Roach, 2025-11-04 Environmental issues are of fundamental importance and a broad approach to understanding the relationship between the human economy and the natural world is essential In a rapidly changing policy and scientific context this new edition of Environmental and Natural Resource Economics continues to reflect an updated perspective on modern environmental topics Now in its sixth edition this textbook includes enhanced and updated material on energy climate change population agriculture forests and water reflecting the greater urgency required to solve global regional and local environmental problems in these areas It introduces students to both standard environmental economics and the broader perspective of ecological economics balancing analytical techniques of environmental economics with a global perspective on current ecological issues such as global climate change ocean degradation plastic pollution water shortages and other environmental challenges Harris and Roach's premise is that a pluralistic approach is essential to understand the complex nexus between the economy and the environment This perspective combined with an emphasis on real world policies is particularly appealing to both instructors and students Environmental and Natural Resource Economics is the ideal text for undergraduate classes on environmental natural resource and ecological economics and other courses on environmental policy

Altruistically Inclined? Alexander J. Field, 2010-08-27 *Altruistically Inclined* examines the implications of recent research in the natural sciences for two important social scientific approaches to individual behavior the economic rational choice approach and the sociological anthropological It considers jointly two controversial and related ideas the operation of group selection within early human evolutionary processes and the likelihood of modularity domain specific adaptations in our cognitive mechanisms and behavioral predispositions Experimental research shows that people will often cooperate in one shot prisoner's dilemma PD games and reject positive offers in ultimatum games contradicting commonly accepted notions of rationality Upon first appearance predispositions to behave in this fashion could not have been favored by natural selection operating only at the level of the individual organism Emphasizing universal and variable features of human culture developing research on how the brain functions and refinements of thinking about levels of selection in evolutionary processes Alexander J Field argues

that humans are born with the rudiments of a PD solution module and differentially prepared to learn norms supportive of it His emphasis on failure to harm as opposed to the provision of affirmative assistance as the empirically dominant form of altruistic behavior is also novel The point of departure and principal point of reference is economics But Altruistically Inclined will interest a broad range of scholars in the social and behavioral sciences natural scientists concerned with the implications of research and debates within their fields for the conduct of work elsewhere and educated lay readers curious about essential features of human nature Alexander J Field is the Michel and Mary Orradre Professor of Economics at Santa Clara University **The BRICS and Beyond** Li Xing, 2016-03-16 The world is in an era of great transformations

Globalization transnational capitalism September 11 the 2008 global financial crises and the emergence of the second world in general and the BRICS in particular are characterized by a diffusion of power away from the traditional North Western powers and towards the global South Such great transformations have reshaped the terrain and parameters of social economic and political relations both at the national and the global levels and have exerted pressure on the exiting international order in terms of both opportunities and constraints This new era also urges the need for re conceptualizing the changing world order especially with regard to one of the core conceptual categories and analytical apparatus in the studies of IR and IPE hegemony The world will witness a new era of interdependent hegemony in which both the existing First World and the emerging Second World are intertwined in a constant process of shaping and reshaping the international order in the nexus of national interest regional orientation common economic and political agenda political alliance and potential conflicts This collection juxtaposes from different perspectives and approaches the discussion on the political economy of the emerging world order with a focus on the rising powers **Beyond the 'African Tragedy'** Malinda S. Smith, 2016-12-05
