Information Systems V Hele-Mai Haav, Ahto Kalja, 2009 The Eighth International Baltic Conference on Databases and Information Systems took place on June 2-5, 2008 in Tallinn, Estonia. This conference is continuing a series of successful bi-annual Baltic conferences on databases and information systems. The aim is to provide a wide international forum for academics and practitioners in the field of databases and modern information systems for exchanging their achievements in this area. The original research results presented in *Databases and Information Systems V* mostly belong to novel fields of IS and database research such as database technology and the semantic web, ontology-based IS, IS and AI technologies, and IS integration. The contribution of Dr. Jari Palomäki showed how different ontological commitments affect the way we are modeling the world when creating an information system. As semantic technologies have been gaining more attention recently, a special session on semantic interoperability of IS was organized. The invited talks from each Baltic State gave a good insight how semantic interoperability initiatives are developing in each of the Baltic States and how they relate to the European semantic interoperability framework.

Trustworthy Hardware Design: Combinational Logic Locking Techniques Muhammad Yasin, Jeyavijayan (JV) Rajendran, Ozgur Sinanoglu, 2019-09-04 With the popularity of hardware security research, several edited monographs have been published which aim at summarizing the research in a particular field. Typically, each book chapter is a recompilation of one or more research papers, and the focus is on summarizing the state of the art research. Different from the edited monographs, the chapters in this book are not re-compilations of research papers. The book follows a pedagogical approach. Each chapter has been planned to emphasize the fundamental principles behind the logic locking algorithms and relate concepts to each other using a systematization of knowledge approach. Furthermore, the authors of this book have contributed to this field significantly through numerous fundamental papers.

Principles of Computer System Design Jerome H. Saltzer, M. Frans Kaashoek, 2009-05-21 *Principles of Computer System Design* is the first textbook to take a principles-based approach to the computer system design. It identifies, examines, and illustrates fundamental concepts in computer system design that are common across operating systems, networks, database systems, distributed systems, programming languages, software engineering, security, fault tolerance, and architecture. Through carefully analyzed case studies from each of these disciplines, it demonstrates how to apply these concepts to tackle practical system design problems. To support the focus on design, the text identifies and explains abstractions that have proven successful in practice, such as remote procedure call, client service organization, file systems, data integrity, consistency, and authenticated messages. Most computer systems are built using a handful of such abstractions. The text describes how these abstractions are implemented, demonstrates how they are used in different systems, and prepares the reader to apply them in future designs. The book is recommended for junior and senior undergraduate students in Operating Systems, Distributed Systems, Distributed Operating Systems, and/or Computer Systems Design courses, and professional computer systems designers. Concepts of computer system design guided by fundamental principles. Cross-cutting approach that identifies
