Dorsey,Judith Pederson,1998 **Effects of Trawling and Dredging on Seafloor Habitat** National Research Council,Division on Earth and Life Studies,Ocean Studies Board,Committee on Ecosystem Effects of Fishing: Phase 1—"Effects of Bottom Trawling on Seafloor Habitats,2002-07-09 Concerns over the potential ecological effects of fishing have increased with the expansion of fisheries throughout the marine waters of the United States Effects of Trawling and Dredging on Seafloor Habitat describes how assessment of fishing impacts depends on gear type number and location of bottom tows and the physical and biological characteristics of seafloor habitats Many experimental studies have documented acute gear specific effects of trawling and dredging on various types of habitat These studies indicate that low mobility long lived species are more vulnerable to towed fishing gear than short lived species in areas where the seabed is often disturbed by natural phenomena Trawling and dredging may also change the composition and productivity of fish communities dependent on seafloor habitats for food and refuge The scale of these impacts depends on the level of fishing effort This volume presents color maps of fishing effort for all regions with significant bottom trawl or dredge fisheries the first time that such data has been assembled and analyzed for the entire nation

Options to Mitigate Bottom Habitat Impact of Draggd Gears John Willy Valdemarsen,Terje Jørgensen,Arill Engås,2007-01-01 Bottom trawling is a diversified fishing method which uses numerous types of gear designs sizes rigging and operational methods Therefore impact on the bottom habitat will differ among the various bottom trawl fisheries and also to a large extent depend on the bottom conditions in the area fished This document describes the basic principles that can be used to reduce the impact of trawling some of which are already developed as practical solutions and implemented in commercial fisheries Overall however there are presently few examples of low bottom impact trawl gears in use in commercial fisheries These basic mitigation measures aim at reducing pressure on the bottom of various trawl components and minimizing the impacted area while trawling **Threats to Our Ocean Heritage: Bottom Trawling** Charlotte Jarvis,2024-05-13 This open access book focuses on the destruction of our Ocean Heritage from bottom trawling It brings together the natural and cultural sides of the marine environment to further our understanding of the importance of this heritage how it is threatened by activities such as bottom trawling and provides recommendations such as a moratorium in particularly vulnerable areas that are currently unprotected It is a unique publication in integrating cultural heritage into a discussion where the primary focus has been the destruction of natural heritage The book is divided into three sections that discuss respectively the international legal context history and ecological impact of bottom trawling case studies highlighting the impact of these destructive activities on underwater cultural heritage and finally recommended future steps and how to use the damage presented here to halt future devastation This book is a valuable tool for resource managers and

representatives of governments and international organizations in their efforts to establish the moratoria called for This book is also of interest to educators archaeologists and practitioners working in the field of underwater cultural heritage This is an open access book
