Efficacy Of Augmentative And Alternative Communication Toward Evidence Based Practice:

The Efficacy of Augmentative and Alternative Communication Ralf W. Schlosser, 2023-02-06 This book provides readers with essential tools for appraising evidence and outlining steps for planning and implementing better efficacy research. It aims to help researchers and practitioners develop the necessary skills for moving the augmentative and alternative communication field toward evidence based practice. *The Efficacy of Augmentative and Alternative Communication Toward Evidence Based Practice* is a crucial addition to anyone's bookshelf who is involved in the AAC enterprise including speech language pathologists, special educators, physical therapists, occupational therapists, students in professional programs, individuals using AAC, their families, and applied researchers. It provides solutions to avoid common pitfalls of prominent research designs for evaluating efficacy and discusses how to formulate research questions and deal with issues of participant selection. It suggests how to plan and evaluate the integrity and social validity of interventions.

Embedding Evidence-Based Practice in Speech and Language Therapy Hazel Roddam, Jemma Skeat, 2010-04-05 Like all health professionals, speech and language therapists (SLTs) need to keep themselves up to date with the research evidence base that is relevant to their field of practice and be able to show how this contributes to their clinical decision making. However, it is not always clear to practitioners how evidence based practice (EBP) can be properly embedded in their day to day activities. In this valuable book, Hazel Roddam and Jemma Skeat present a wealth of instructive examples by SLT contributors from around the world showing how clinicians, educators, and researchers have risen to the EBP challenge. Embedding evidence based practice in speech and language therapy showcases the creative ways that SLTs are developing knowledge and skills for EBP, creating contexts that support the use of evidence in practice and working towards making evidence easily accessible and usable. It includes real life examples of how SLTs have encountered a clinical problem or situation and have accessed and used the evidence within their day to day practice. The contributors come from a wide range of work settings, from services situated within large organizations to those in independent practice, and represent a range of clinical areas, from paediatric to adult, and across speech language voice fluency, Augmentative and Alternative Communication, AAC, and dysphagia. This book is written for an audience of clinical practitioners at any stage of their career and is additionally a valuable resource for SLT students and lecturers.

Literacy and Augmentative and Alternative Communication Martine Smith, 2021-11-15 The new demands of this computer and technology age have focused international attention on literacy levels on literacy development and literacy disorders Governments have launched programs to reduce literacy difficulties and support

functional literacy for all In this context the needs of individuals with severe speech and physical impairments may seem relatively small and even unimportant However for this group of individuals in particular unlocking the literacy code opens up tremendous opportunities minimizing the disabling effects of their underlying speech and motor impairments and supporting participation in society Ironically however for a group for whom literacy is such an important achievement current studies suggest that achieving functional literacy skills is particularly challenging In order to read individuals with severe speech impairments must access a set of written symbols and decode them to abstract meaning just as anyone else must do They must convert underlying messages into an alternative external symbol format in order to write In order to become expert in both of these activities they must learn at least a certain core of knowledge about how the symbols and messages relate to each other Just as there are many ways to skin a chicken there are many possible ways to achieve mastery of reading and writing Although the essence of the task may remain the same for individuals with congenital speech impairments they may process the task or develop task mastery in ways that are quite different from speaking children who have no additional physical impairments Literacy and Augmentative and Alternative Communication focuses on individuals with combined physical and communication impairments who rely at least some of the time on aided communication It investigates the range of research and application issues relating to AAC and literacy primarily reading and writing skills from the emergent literacy stage up through adulthood use of reading for various vocational and leisure purposes It provides a balanced view of both the whole language as well as the more analytic approaches to reading instruction necessary for the development of reading skills

Neurological Rehabilitation Pam Enderby, 2013-01-10 Dysarthria is a motor speech disorder which can be classified according to the underlying neuropathology and is associated with disturbances of respiration laryngeal function airflow direction and articulation resulting in difficulties of speech quality and intelligibility There are six major types of dysarthria flaccid dysarthria associated with lower motor neuron impairment spastic dysarthria associated with damaged upper motor neurons linked to the motor areas of the cerebral cortex ataxic dysarthria primarily caused by cerebellar dysfunction and hyperkinetic dysarthria and hypokinetic dysarthria which are related to a disorder of the extrapyramidal system The sixth is generally termed a mixed dysarthria and is associated with damage in more than one area resulting in speech characteristics of at least two groups The features of the speech disturbance of these six major types of dysarthria are distinctive and can assist with diagnosis Dysarthria is a frequent symptom of many neurological conditions and is commonly associated with progressive neurological disease It has a profound effect upon the patient and their families as communication is integrally related with expressing personality and social relationships Speech and language therapy can be used to encourage the person to use the speech that is already available to them more effectively can increase the range and consistency of sound production can teach strategies for improving intelligibility and communicative effectiveness can guide the individual to use methods that are less tiring and more successful and can introduce the appropriate Augmentative and

Alternative Communication approaches as and when required
