Economic Decisions Under Uncertainty:

Economic Decisions Under Uncertainty Hans-Werner Sinn, 2012-12-06 The Fundamental Issues Involved Why do we need a theory of uncertainty It is a fact that almost all man's economic decisions are made under conditions of uncertainty but this fact alone does not provide a strong enough argument for making the effort necessary to generalize ordinary preference theory designed for a world of perfect certainty In accordance with Occam's Razor the mathematician may well welcome a generalization of assumptions even if it does not promise more than a restatement of known results The economist however will only be well disposed towards making the effort if he can expect to achieve new insights and interesting results for he is interested in the techniques necessary for the generalization only as means to an end not as ends in themselves A stronger reason for developing a theory of uncertainty therefore seems to be the fact that there are kinds of economic activities to which the non stochastic preference theory has no access or has access only through highly artificial constructions Such activities include portfolio decisions of wealth holders speculation and insurance These will be considered in detail in the last chapter of the book The main purpose of this book however is not to apply a theory of uncertainty to concrete economic problems the purpose rather is to formulate such a theory Essays on Economic Decisions Under Uncertainty

Jacques Drèze, 1990-05-25 Professor Dreze is a highly respected mathematical economist and econometrician This book brings together some of his major contributions to the economic theory of decision making under uncertainty and also several essays These include an important essay on Decision theory under moral hazard and state dependent preferences that significantly extends modern theory and which provides rigorous foundations for subsequent chapters Topics covered within the theory include decision theory market allocation and prices consumer decisions theory of the firm labour contracts and public decisions **Essays on Economic Decisions Under Uncertainty** Jacques H. Drèze, 1987

Theory of Decision under Uncertainty Itzhak Gilboa, 2009-03-16 This book describes the classical axiomatic theories of decision under uncertainty as well as critiques thereof and alternative theories It focuses on the meaning of probability discussing some definitions and surveying their scope of applicability The behavioral definition of subjective probability serves as a way to present the classical theories culminating in Savage's theorem The limitations of this result as a definition of probability lead to two directions first similar behavioral definitions of more general theories such as non additive probabilities and multiple priors and second cognitive derivations based on case based techniques *The Psychology of Economic Decisions* Isabelle Brocas, Juan D. Carrillo, 2003 Psychologists have a long tradition of studying human behavior strengths and weaknesses biases and limitations Economists have constructed normative frameworks that capture the most important elements of human decision making and developed powerful tools to determine individual and strategic choices in a variety of situations Only recently have their strengths been combined and economic models enriched with key ingredients found in psychological studies This volume covers four of the most important themes in this interdisciplinary field feelings

inconsistencies limitations and biases Each chapter contributes to a more comprehensive and accurate modelling and description of human behavior Its four parts cover the origins formation and evolution of beliefs consistency commitment and intertemporal separability of dynamic choices attention preference formation and risk evaluation in limited cognition and affective behaviour specifically the role of emotions in decision making Optimal Decisions Under Uncertainty J.K.

Sengupta,2012-12-06 Understanding the stochastic environment is as much important to the manager as to the economist From production and marketing to financial management a manager has to assess various costs imposed by uncertainty The economist analyzes the role of incomplete and too often imperfect information structures on the optimal decisions made by a firm The need for understanding the role of uncertainty in quantitative decision models both in economics and management science provide the basic motivation of this monograph The stochastic environment is analyzed here in terms of the following specific models of optimization linear and quadratic models linear programming control theory and dynamic programming Uncertainty is introduced here through the parameters the constraints and the objective function and its impact evaluated Specifically recent developments in applied research are emphasized so that they can help the decision maker arrive at a solution which has some desirable characteristics like robustness stability and cautiousness Mathematical treatment is kept at a fairly elementary level and applied aspects are emphasized much more than theory Moreover an attempt is made to incorporate the economic theory of uncertainty into the stochastic theory of operations research Methods of optimal decision rules illustrated here are applicable in three broad areas a applied economic models in resource allocation and economic planning b operations research models involving portfolio analysis and stochastic linear programming and c systems science models in stochastic control and adaptive behavior **Information and Efficiency in Economic Decision** Jati

Sengupta,2012-12-06 Use of information is basic to economic theory in two ways As a basis for optimization it is central to all normative hypotheses used in economics but in decision making situations it has stochastic and evolutionary aspects that are more dynamic and hence more fundamental This book provides an illustrative survey of the use of information in economics and other decision sciences Since this area is one of the most active fields of research in modern times it is not possible to be definitive on all aspects of the issues involved However questions that appear to be most important in this author's view are emphasized in many cases without drawing any definite conclusions It is hoped that these questions would provoke new interest for those beginning researchers in the field who are currently most active Various classifications of information structures and their relevance for optimal decision making in a stochastic environment are analyzed in some detail Specifically the following areas are illustrated in its analytic aspects 1 Stochastic optimization in linear economic models 2 Stochastic models in dynamic economics with problems of time inconsistency causality and estimation 3 Optimal output inventory decisions in stochastic markets 4 Minimax policies in portfolio theory 5 Methods of stochastic control and differential games and 6 Adaptive information structures in decision models in economics and the theory of economic policy

Marketing Decisions Under Uncertainty Dung Nguyen, 2012-12-06 Remarkable advance in quantitative marketing research in the last two decades incorporating applied microeconomic theories operations research and management applications has brought the field of marketing alongside with finance accounting and production to within an executive's reach for a sophisticated toolbox for decision making in an increasingly competitive and complex business environment A quick look at *Marketing* a recently published book edited by Eliashberg and Lilien would indicate even to the casual reader the extent of such methodological progress made by marketing scholars Even in such an impressive and nearly exhaustive collection of topics with the notable exception pointed out by the editors of applications of the scanner data and in spite of the reference to it an important omission is related to the issues of marketing decisions under conditions of uncertainty It is fairly obvious to the marketing executive and academician alike to recognize the important role uncertainty plays in marketing decisions such as pricing promotion advertising sales force management and others The major purpose of this study is to address certain major marketing decision variables within the general context of an uncertain environment While there have been significant progresses in analyzing marketing behaviors in a stochastic environment the source scatter among different management and marketing journals and to the extent that these issues are addressed at all they have aimed mainly at each separate specific topic at a time Thus our effort to bring these studies together in the same framework should facilitate our in depth analysis of these important phenomena

Economic and Financial Decisions under Risk Louis Eeckhoudt, Christian Gollier, Harris Schlesinger, 2011-10-30 An understanding of risk and how to deal with it is an essential part of modern economics Whether liability litigation for pharmaceutical firms or an individual's having insufficient wealth to retire risk is something that can be recognized quantified analyzed treated and incorporated into our decision making processes This book represents a concise summary of basic multiperiod decision making under risk Its detailed coverage of a broad range of topics is ideally suited for use in advanced undergraduate and introductory graduate courses either as a self contained text or the introductory chapters combined with a selection of later chapters can represent core reading in courses on macroeconomics insurance portfolio choice or asset pricing The authors start with the fundamentals of risk measurement and risk aversion They then apply these concepts to insurance decisions and portfolio choice in a one period model After examining these decisions in their one period setting they devote most of the book to a multiperiod context which adds the long term perspective most risk management analyses require Each chapter concludes with a discussion of the relevant literature and a set of problems The book presents a thoroughly accessible introduction to risk bridging the gap between the traditionally separate economics and finance literatures

The New Palgrave Dictionary of Money and Finance John Eatwell, Murray Milgate, Peter Newman, 1992-10-14 The first reference work ever to be awarded the Eccles Prize for Excellence in Economic Writing from Columbia Business School Continuing in the tradition of *The New Palgrave* this 3 volume set provides an unparalleled guide to modern money banking and finance In over 1 000

substantial essays by leading academic and professional authorities it provides the most comprehensive analysis available of contemporary theory and the fast evolving global monetary and financial framework In its scope and depth of coverage it is indispensable for the academic and practitioner alike *The Oxford Handbook of the Economics of Food Consumption and Policy* Jayson L. Lusk, Jutta Roosen, Jason Shogren, 2011-09-08 Historically the challenge for humans has been to secure a sufficient supply of food to stave off hunger and starvation As a result much of the research on food and agriculture in the past century has focused on issues related to production efficiency food supply and farm profitability In recent years however farmers agribusiness policy makers and academics have increasingly turned their attention away from the farm and toward the food consumer and to issues related to food consumption This handbook provides an overview of the economics of food consumption and policy and is a useful reference for academics and graduate students interested in food economics and the consumer end of the supply chain It is also relevant to those employed in food and agricultural industries policy makers and activist groups The first section covers the application of the core theoretical and methodological approaches of the economics of food consumption and policy The second part concentrates on policy issues related to food consumption Several chapters focus on the theoretical and conceptual issues relevant in food markets such as product bans labeling food standards political economy and scientific uncertainty Additional chapters discuss policy issues of particular interest to the consumer end of the food supply chain such as food safety nutrition food security and development The final section serves as an introduction to particular issues and current topics in food consumption and policy **Advances in Public Economics:**

Utility, Choice and Welfare Ulrich U. Schmidt, Stefan Traub, 2006-06-28 This Festschrift in honor of Christian Seidl combines a group of prominent authors who are experts in areas like public economics welfare economic decision theory and experimental economics in a unique volume Christian Seidl who has edited together with Salvador Barbera and Peter Hammond the Handbook of Utility Theory appearing at Kluwer Academic Publishers Springer Economics has dedicated most of his research to utility and decision theory social choice theory welfare economics and public economics During the last decade he has turned part of his attention to a research tool that is increasingly gaining in importance in economics the laboratory experiment This volume is an attempt to illuminate all facets of Christian Seidl's ambitious research agenda by presenting a collection of both theoretical and experimental papers on Utility Choice and Welfare written by his closest friends former students and much valued colleagues Christian Seidl was born on August 5 1940 in Vienna Austria Beginning Winter term 1962/63 he studied Economics and Business Administration at the Vienna School of Economics then Hochschule für Wirtschaft 1966 he was awarded an MBA by the Vienna School of Economics and 1969 a doctoral degree in Economics In October 1968 Christian became a research assistant at the Institute of Economics at the University of Vienna 1973 he acquired his habilitation right to teach in Economics supervised by Wilhelm Weber from the Department of Law and Economics of the University of Vienna He was awarded the Dr **Investment Under Uncertainty** Avinash K. Dixit, Robert

S. Pindyck, 1994 How should firms decide whether and when to invest in new capital equipment additions to their workforce or the development of new products Why have traditional economic models of investment failed to explain the behavior of investment spending in the United States and other countries In this book Avinash Dixit and Robert Pindyck provide the first detailed exposition of a new theoretical approach to the capital investment decisions of firms stressing the irreversibility of most investment decisions and the ongoing uncertainty of the economic environment in which these decisions are made In so doing they answer important questions about investment decisions and the behavior of investment spending This new approach to investment recognizes the option value of waiting for better but never complete information It exploits an analogy with the theory of options in financial markets which permits a much richer dynamic framework than was possible with the traditional theory of investment The authors present the new theory in a clear and systematic way and consolidate synthesize and extend the various strands of research that have come out of the theory Their book shows the importance of the theory for understanding investment behavior of firms develops the implications of this theory for industry dynamics and for government policy concerning investment and shows how the theory can be applied to specific industries and to a wide variety of business problems

Comparative Decision Making Philip H. Crowley, Thomas R. Zentall, 2013-01-30 Decision making cuts across most areas of intellectual enquiry and academic endeavor The classical view of individual human thinkers choosing among options remains important and instructive but the contributors to this volume broaden this perspective to characterize the decision making behavior of groups non human organisms and even non living objects and mathematical constructs A diverse array of methods is brought to bear mathematical computational subjective neurobiological evolutionary and cultural We can often identify best or optimal decisions and decision making processes but observed responses may deviate markedly from these to a large extent because the environment in which decisions must be made is constantly changing Moreover decision making can be highly constrained by institutions natural and social context and capabilities Studies of the mechanisms underlying decisions by humans and other organisms are just beginning to gain traction and shape our thinking Though decision making has fundamental similarities across the diverse array of entities considered to be making them there are large differences of degree if not kind that relate to the question of human uniqueness From this survey of views and approaches we converge on a tentative agenda for accelerating development of a new field that includes advancing the dialog between the sciences and the humanities developing a defensible classification scheme for decision making and decision makers addressing the role of morality and justice and moving advances into applications the rapidly developing field of decision support

Probability Models for Economic Decisions, second edition Roger B.

Myerson, Eduardo Zambrano, 2019-12-17 An introduction to the use of probability models for analyzing risk and economic decisions using spreadsheets to represent and simulate uncertainty This textbook offers an introduction to the use of probability models for analyzing risks and economic decisions It takes a learn by doing approach teaching the student to use

spreadsheets to represent and simulate uncertainty and to analyze the effect of such uncertainty on an economic decision. Students in applied business and economics can more easily grasp difficult analytical methods with Excel spreadsheets. The book covers the basic ideas of probability, how to simulate random variables and how to compute conditional probabilities via Monte Carlo simulation. The first four chapters use a large collection of probability distributions to simulate a range of problems involving worker efficiency, market entry, oil exploration, repeated investment and subjective belief elicitation. The book then covers correlation and multivariate normal random variables, conditional expectation, optimization of decision variables with discussions of the strategic value of information, decision trees, game theory and adverse selection, risk sharing and finance, dynamic models of growth, dynamic models of arrivals and model risk. New material in this second edition includes two new chapters on additional dynamic models and model risk, new sections in every chapter, many new end of chapter exercises and coverage of such topics as simulation, model workflow, models of probabilistic electoral forecasting and real options. The book comes equipped with Simtools, an open source free software used throughout the book which allows students to conduct Monte Carlo simulations seamlessly in Excel.

Foundations of Insurance Economics Georges Dionne, Scott E. Harrington, 2013-11-11. Economic and financial research on insurance markets has undergone dramatic growth since its infancy in the early 1960s. Our main objective in compiling this volume was to achieve a wider dissemination of key papers in this literature. Their significance is highlighted in the introduction which surveys major areas in insurance economics. While it was not possible to provide comprehensive coverage of insurance economics in this book, these readings provide an essential foundation to those who desire to conduct research and teach in the field. In particular, we hope that this compilation and our introduction will be useful to graduate students and to researchers in economics, finance and insurance. Our criteria for selecting articles included significance, representativeness, pedagogical value and our desire to include theoretical and empirical work. While the focus of the applied papers is on property liability insurance, they illustrate issues, concepts and methods that are applicable in many areas of insurance. The S. S. Huebner Foundation for Insurance Education at the University of Pennsylvania's Wharton School made this book possible by financing publication costs. We are grateful for this assistance and to J. David Cummins, Executive Director of the Foundation, for his efforts and helpful advice on the contents. We also wish to thank all of the authors and editors who provided permission to reprint articles and our respective institutions for technical and financial support.

Keynes, Uncertainty and the Global Economy Sheila C. Dow, John Hillard, 2002-01-01. This book should be welcomed by post Keynesian economists, microeconomists and those interested in international economics.

[The Mind under the Axioms](#) Sacha Bourgeois-Gironde, 2019-09-18. The Mind under the Axioms reviews two basic ingredients of our understanding of human decisions: conative aspects (preferences and cognitive aspects, beliefs). These ingredients are axiomatized in modern decision theory in the view to obtain a formally and empirically tractable representation of the decision maker. The main issue developed in this book is the connection between realistic and testable

psychological features and the descriptive component of abstract axioms of rationality It addresses three main topics for which the interaction between axiomatization and psychology leads to potential new developments in experimental decision theory and puts strictures on the standard revealed preference methodology prevailing in that field The possibility of a cardinal representation of preferences is discussed Different ways of accounting for incomplete preferences and in which sense are analysed Finally the conditions of separability between preferences and beliefs such as prescribed by axioms of state independence are submitted to actual and potential tests The book offers a bridge between the disciplines of decision theory psychology and neuroeconomics It is thus relevant for those in psychology and cognitive sciences who are sometimes put off by the high degree of formalism and abstraction in decision theory that seems to lie beyond the reach of psychological realism It also aims to convince those in decision theory for whom psychological realism and empirical testability should not constrain the modelling enterprise that conceptual clarification can come from attempted experimentation Addresses open and evolving theoretical issues in decision theory especially from experimental perspectives Helps researchers understand the psychological and neuroscientific mechanisms for decision making Considers how preferences shape beliefs and how beliefs shape preferences Uncovers the very formal and abstract psychological and behavioral implications that are actually made in contemporary decision theory
