X-Machines for Agent-Based Modeling Mariam Kiran, 2017-08-30 From the Foreword This book exemplifies one of the most successful approaches to modeling and simulating the new generation of complex systems FLAME was designed to make the building of large scale complex systems models straightforward and the simulation code that it generates is highly efficient and can be run on any modern technology FLAME was the first such platform that ran efficiently on high performance parallel computers and a version for GPU technology is also available At its heart and the reason why it is so efficient and robust is the use of a powerful computational model Communicating X machines which is general enough to cope with most types of modelling problems As well as being increasingly important in academic research FLAME is now

being applied in industry in many different application areas This book describes the basics of FLAME and is illustrated with numerous examples Professor Mike Holcombe University of Sheffield UK Agent based models have shown applications in various fields such as biology economics and social science Over the years multiple agent based modeling frameworks have been produced allowing experts with non computing background to easily write and simulate their models However most of these models are limited by the capability of the framework the time it takes for a simulation to finish or how to handle the massive amounts of data produced FLAME Flexible Large scale Agent based Modeling Environment was produced and developed through the years to address these issues This book contains a comprehensive summary of the field covers the basics of FLAME and shows how concepts of X machines can be stretched across multiple fields to produce agent models It has been written with several audiences in mind First it is organized as a collection of models with detailed descriptions of how models can be designed especially for beginners A number of theoretical aspects of software engineering and how they relate to agent based models are discussed for students interested in software engineering and parallel computing Finally it is intended as a guide to developers from biology economics and social science who want to explore how to write agent based models for their research area By working through the model examples provided anyone should be able to design and build agent based models and deploy them With FLAME they can easily increase the agent number and run models on parallel computers in order to save on simulation complexity and waiting time for results Because the field is so large and active the book does not aim to cover all aspects of agent based modeling and its research challenges The models are presented to show researchers how they can build complex agent functions for their models The book demonstrates the advantage of using agent based models in simulation experiments providing a case to move away from differential equations and build more reliable close to real models The Open Access version of this book available at <https://doi.org/10.1201/9781315370729> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

IAPSM's Textbook of Community Medicine AM

Kadri,2019-06-30 **Political Economy Of World Energy, The: An Introductory Textbook** Ferdinand E Banks,2007-06-15 This easy to read book presents an elementary yet comprehensive introduction to modern energy economics Mathematical content is kept to a minimum and advanced numerical concepts are placed in appendices The two survey chapters are suitable for readers with little or no formal training in economics Differing greatly from other energy textbooks the book aims to provide the reader with an informed advantage Principally intended as a textbook for undergraduate economics students it can also be used for self study or as a reference material **Books in the Digital Age** John B. Thompson,2013-10-21 The book publishing industry is going through a period of profound and turbulent change brought about in part by the digital revolution What is the role of the book in an age preoccupied with computers and the internet How has the book publishing industry been transformed by the economic and technological upheavals of recent years and how is it likely to change in the future This is the first major study of the book publishing industry in Britain and the United States for more than two decades Thompson focuses on academic and higher education publishing and analyses the evolution of these sectors from 1980 to the present He shows that each sector is characterized by its own distinctive logic or dynamic of change and that by reconstructing this logic we can understand the problems challenges and opportunities faced by publishing firms today He also shows that the digital revolution has had and continues to have a profound impact on the book publishing business although the real impact of this revolution has little to do with the ebook scenarios imagined by many commentators Books in the Digital Age will become a standard work on the publishing industry at the beginning of the 21st century It will be of great interest to students taking courses in the sociology of culture media and cultural studies and publishing It will also be of great value to professionals in the publishing industry educators and policy makers and to anyone interested in books and their future **Economic and Business Analysis** Frank S. T. Hsiao,2011 As we enter the 21st century most students are familiar with microcomputers They are adept in visually oriented playing and learning as evidenced by prevalent video games music videos and DVD movies This book appeals to the modern day undergraduate and graduate students by using microcomputers through innovative uses of spreadsheets and built in spreadsheets equations and formulae This microcomputer skill intensive book covers major topics in both economic analysis and business analysis Students will learn how to build complex spreadsheet layouts and perform high level calculations and analysis intuitively in a non threatening environment To encourage students active learning and critical thinking they will be given hands on practice by creating tables and graphs presented in the text and homework and by changing the parameters to find the effects of the change instantly At the same time by acquainting themselves with the popular spreadsheet program they will acquire more advanced job skills directly
