Bubbles and Contagion in Financial Markets, Volume 1 E. Porras, 2016-06-29 Understanding the formation of bubbles and the contagion mechanisms afflicting financial markets is a must as extreme volatility events leave no market untouched Debt equity real estate commodities Shanghai NY or London The severe fluctuations explained to a large extent by contagion and the fear of new bubbles imploding justify the newly awaken interest in the contagion and bubble dynamics as yet again the world brazes for a new global economic upheaval Bubbles and Contagion in Financial Markets explores concepts intuition theory and models Fundamental valuation share price development in the presence of asymmetric information the speculative behavior of noise traders and chartists herding and the feedback and learning

mechanisms that surge within the markets are key aspects of these dynamics Bubbles and contagion are a vast world and fascinating phenomena that escape a narrow exploration of financial markets Hence this work looks beyond into macroeconomics monetary policy risk aggregation psychology incentive structures and many more subjects which are in part co responsible for these events Responding to the ever more pressing need to disentangle the dynamics by which financial local events are transmitted across the globe this volume presents an exhaustive and integrative outlook to the subject of bubbles and contagion in financial markets The key objective of this volume is to give the reader a comprehensive understanding of all aspects that can potentially create the conditions for the formation and bursting of bubbles and the aftermath of such events the contagion of macro economic processes Achieving a better understanding of the formation of bubbles and the impact of contagion will no doubt determine the stability of future economies let these two volumes be the starting point for a rational approach to a seemingly irrational phenomena Economics, Accounting and the True Nature of Capitalism Jacques Richard, Alexandre Rambaud, 2021-11-29 Almost all economists whether classical neoclassical or Marxist have failed in their analyses of capitalism to consider the underpinning systems of accounting This book draws attention to this lacuna focusing specifically on the concept of capital a major concept that dominates all teaching and practice in both economics and management It is argued that while for the practitioners of capitalism in accounting and business the capital in their accounts is a debt to be repaid or a thing to be kept for economists it has been considered a means or even a resource or an asset intended to be worn out This category error has led to economists failing to comprehend the true nature of capitalism On this basis this book proposes a new definition of capitalism that brings about considerable changes in the attitude to be had towards this economic system in particular the means to bring about its replacement This book will be of significant interest to readers of political economy history of economic thought critical accounting and heterodox economics
