Aquatic Invasions in the Black, Caspian, and Mediterranean Seas Henri J. Dumont, Tamara A. Shiganova, Ulrich Niermann, 2006-04-11 The present volume contains the presentations of a NATO advanced Research Workshop ARW entitled The invasion of the Black Mediterranean and Caspian Seas by the American Ctenophore Mnemiopsis leidyi Agassiz a multidisciplinary perspective and a comparison with other aquatic invasions held on 24-26 June 2002 in Baku Azerbaijan The meeting was nanced by the NATO Division for Scientific and Environmental Affairs Brussels substantial logistic support was provided by the CEP Caspian Environmental Program of the GEF in Baku The Mediterranean Black and Caspian Seas represent three fragments of the former Tethys Sea and are thus of great interest to understanding the evolution of the entire region where Eurasia Africa and the Arabian Peninsula meet While the Mediterranean is a typical marine environment with salinity even a little above the world ocean s the Black Sea is a brackish meromictic lake and the Caspian is a lake with a saline gradient extending from a freshwater basin in the North to a brackish water basin in the South Intense shing activity takes place in all three seas while maritime traf c through the Dardanelles and Bosphorus and via the Lenin Canal between the Don and Volga rivers to the Caspian Sea has become greatly intensi ed in the course of the last few decades

Diversity in Coastal Marine Sciences Charles W. Finkl, Christopher Makowski, 2017-09-19 This book integrates a wide range of subjects into a coherent purview of the status of coastal marine science Designed for the professional or specialist in coastal science oceanography and related disciplines this work will appeal to workers in multidisciplinary fields that strive for practical solutions to environmental problems in coastal marine settings around the world Examples are drawn from many different geographic areas including the Black Sea region Subject areas covered include aspects of coastal marine geology physics chemistry biology and history These subject

areas were selected because they form the basis for integrative investigation of salient environmental problems or perspective solutions or interpretation of historical context

The Physics of The Biblical Flood , *Chemical Structure of Pelagic Redox Interfaces* Evgeniy V. Yakushev, 2012-09-14 Over the last few decades many studies have focused on the oxygen depletion of coastal and oceanic waters An understanding of the processes involved is fundamental to assess the effects of global and climatic changes and to support an ecosystem approach to adaptive environmental management for coastal seas and ocean basins This timely book presents the state of the art of our knowledge of the nature and chemical structure of redox interfaces in a marine water column oxygen depletion and connected processes The structures of the redox layers including the distribution of certain parameters and microbiological features are described in detail The volume also covers studies devoted to the interannual variability of some oxygen depleted systems modeling and new developments in observation techniques In addition it identifies remaining gaps in our knowledge of the cycling of chemical elements in changing redox conditions The chapters are based on extensive observational data collected by the authors during sea and shore expeditions on archive data and on a broad range of scientific literature

An Assessment of Assessments , 2009 Despite the central role oceans play in the economic environmental and social affairs of the planet s 6 7 billion inhabitants significant gaps exist in our understanding and management of the complex processes at work from the global climate system to the water cycle and circulation of nutrients to changes affecting marine habitats In addition the vastness of the world s oceans have for far too long been perceived as impervious and indestructible to human impact To deal with this situation improved monitoring and observation practices regular assessments to provide a deeper understanding of the status and trends of environmental changes and the know how and ability to prevent mitigate and adapt to these changes are urgently required The UN General Assembly in 2005 recommended that a regular process for the global reporting and assessment of the state of the marine environment including its socio economic aspects Regular Process be initiated The UN Environment Programme UNEP and the Intergovernmental Oceanographic Commission of UNESCO IOC UNESCO were asked to serve as the lead agencies in the start up phase that came to be known as the Assessment of Assessments AoA Under the AoA an Expert Group have developed options and a framework for such a Regular Process which can serve as the mechanism to keep the world s oceans and seas under continuing review

The Eastern Mediterranean as a Laboratory Basin for the Assessment of Contrasting Ecosystems P.M. Malanotte-Rizzoli, Valery N. Eremeev, 2012-12-06 This book is the outcome of a NATO Advanced Research Workshop on The Eastern Mediterranean as a laboratory basin for the assessment of contrasting ecosystems that was held in Kiev Ukraine March 23 27 1998 The scientific rationale of the workshop can be summarized as follows The Eastern Mediterranean is the most nutrient impoverished and oligotrophic large water body known There is a well defined eastward trend in nutrient ratios over the entire Mediterranean that starts at the Gibraltar Straits and through the western basin proceeds to the Ionian and Levantine Seas Supply of nutrients to the entire

Mediterranean is limited by inputs from the North Atlantic and various river systems along the sea. The unique feature of the Mediterranean is the presence of an eastward longitudinal trend in available nitrate:phosphate ratios. This apparently induces a west to east variation in the structure of the pelagic food web and trophic interactions. In this context the Mediterranean and in particular its Eastern basin provides probably a unique platform to explore the hypotheses related to the suggested phosphate limitation on production and to the shift between microbial and classical modes of operation of the photic food web. The major exception of the overall oligotrophic nature of the Eastern Mediterranean is the highly eutrophic system of the Northern Adriatic Sea. Here during the last two decades the discharges of the northern rivers especially of the Po together with municipal sewage have led to a very marked increase of nutrients and subsequent important eutrophication events.

Satellites, Oceanography and Society D. Halpern, 2000-06-06 The book shows how the new observations from satellites required advances in theory and influenced societal decision making. Chapters have a review with an extensive reference list making the book an excellent source of information for biological and physical oceanographers and atmospheric scientists. A large range of state of the art applications of satellite data altimeter color infrared radiometer scatterometer synthetic aperture radar visible in regional to global scale ocean studies integrating satellite and in situ measurements with circulation models are covered in the book. Subjects include forecasting of surface waves both swell and windsea and surface wind. El Niño La Niña exchange of water masses between ocean basins Rossby waves eddies and filaments fisheries coastal ocean dynamics phytoplankton dynamics and ideas to measure sea surface salinity.

The Black Sea Encyclopedia Sergei R. Grinevetsky, Igor S. Zonn, Sergei S. Zhiltsov, Aleksey N. Kosarev, Andrey G. Kostianoy, 2014-09-30 This publication is devoted to the natural feature the Black Sea and its littoral states. At the same time the Azov Sea is also considered here. Invasive Aquatic Species of Europe. Distribution, Impacts and Management Erkki Leppäkoski, Stephan Gollasch, Sergej Olenin, 2013-06-29 The global scale of alien species invasions is becoming more and more evident in the beginning of the new millennium. Though the problem of biological invasions became a rapidly growing research area there are large gaps still both geographically and thematically to be filled in the near future. This book is the first attempt to provide an overall picture of aquatic species invasions in Europe. Its geographical scope stretches from Irish waters in the west to Volga River and the Caspian Sea in the east and from Mediterranean in the south.

up to the Arctic coast of Europe Not all parts of the continent could be equally covered as in some countries species invasions are not studied yet The book tends to represent the array of all major European aquatic systems on the broadest geographical and ecological scope possible from fully saline seas semi enclosed brackish water bodies and coastallagoons to freshwater lakes major river systems and waterways The key objectives include the present status and impacts caused by non native aquatic species in European waters Please note that lengthy species lists submitted for publication and additional information were put on the Internet as the electronical version of these tables benefits from computer assisted search for data <http://www.ku.lt/nemo/EuroAquaInvaders.htm> Altogether more than 100 scientists from 24 countries have joined to synthesize the available information on bioinvasions However the book does not claim to be fully comprehensive The Black Sea Environment Aleksey N. Kosarev, 2007-10-27 Based on a wealth of primary data collected by expeditions as well as archive data from Russia this fascinating book features a systematic description of the knowledge accumulated on the physical oceanography marine chemistry and pollution marine biology and geology meteorology and hydrology of the Black Sea It presents the principal characteristic features of the environmental conditions of the sea and their changes in the second half of the 20th century *Jellyfish Blooms: Causes, Consequences and Recent Advances* Kylie A. Pitt, Jennifer E. Purcell, 2009-03-31 Jellyfish form spectacular population blooms and there is compelling evidence that jellyfish blooms are becoming more frequent and widespread Blooms have enormous ecological economic and social impacts For example they have been implicated in the decline of commercial fisheries they block the cooling water intakes of coastal industries and ships and reduce the amenity of coastal waters for tourists Blooms may be caused by overfishing climate change and coastal pollution which all affect coastal waters around the world *Jellyfish Blooms Causes Consequences and Recent Advances* presents reviews and original research articles written by the world's leading experts on jellyfish Topics covered include the evolution of jellyfish blooms the impacts of climate change on jellyfish populations advances in acoustic and molecular methods used to study jellyfish the role of jellyfish in food webs and nutrient cycles and the ecology of the benthic stages of the jellyfish life history This is a valuable resource for students and professional marine biologists fisheries scientists oceanographers and researchers of climate change *Black Sea Oceanography* The Oceanography Society, 2005

Jellyfish Blooms: Ecological and Societal Importance J.E. Purcell, W.M. Graham, Henri J. Dumont, 2012-12-06 Jellyfish a group that includes scyphomedusae hydromedusae siphonophores and ctenophores are important zooplankton predators throughout the world's estuaries and oceans These beautiful creatures have come to public attention as featured exhibits in aquaria and in news headlines as invaders and as providers of genes used in biomedical research Nevertheless jellyfish are generally considered to be nuisances because they interfere with human activities by stinging swimmers clogging power plant intakes and nets of fishermen and fish farms and competing with fish and eating fish eggs and larvae There is concern that environmental changes such as global warming eutrophication and over fishing may result in increased jellyfish

populations The literature reviews and research papers in this volume explore the interactions between jellyfish and humans Papers cover the medical aspects of jellyfish stings jellyfish as human food and jellyfish fisheries interactions of jellyfish and fish effects of environmental changes on jellyfish effects of introduced ctenophores on the Black Sea ecosystem factors causing increases or concentrations of jellyfish and others aspects of jellyfish ecology This is an important reference for students and professional marine biologists oceanographers fishery scientists and aquarists
