Econometric Models of Asian Link Shinichi Ichimura, Mitsuo Ezaki, 2012-12-06 This is the first outcome of our effort in ASIAN LINK PROJECT to construct the econometric models of Asian developing countries and analyze their inter dependence with major trading partners the United States and Japan The model we present here is called Asian Link System The countries in this system include Korea Taiwan Hong Kong China the Philippines Thailand Malaysia Singapore Indonesia Japan and the United States They are covered by national models The rest of the world is divided into several regions and treated by simple proto type models The main characteristics of Asian Link System are to deal with the inter dependent relations between Asian developing countries on the one hand and Japan and United States on the other hand Here are presented these national models and the Asian Link System with the underlying statistical data so that any econometrician can re estimate our models and check the results of our research work Nowadays most articles and books in econometrics report only the final results or conclusions of research so that no other econometrician can re calculate or re examine the findings This is very serious in the empirical research because as theorists may make mistakes positive economists do commit errors or miss some possible considerations Unless statistical data are offered other econometricians cannot make suggestions or improve the models This is the main reason why empirical research in econometrics or applied econometrics are not making substantial progress in recent years
