Selvanathan, 2024-07-05 This book analyzes consumption patterns in Asian countries that are at different stages of economic development and highlights the similarities and disparities of consumption patterns across countries using a system wide framework In a departure from previous studies in the literature which mainly present only single country analysis this book aims to provide a comprehensive analysis of cross country consumption patterns considering several Asian countries using the most recent consumption expenditure data for aggregate commodity groups In comparing consumption patterns across countries the book use unit free measurements such as budget shares and changes in logarithms of price and quantities thus avoiding problems associated with exchange rate conversions The book also analyses the dynamic behaviour in the consumption patterns of the Asian consumers The findings of this book will be invaluable to researchers in development economics as well as policymakers in the formulation of fiscal policy or other types of economic control

This book provides answers to analysts need to know about elasticities of demand with a unique two track approach The first gives a self contained non technical rendition accessible to those with limited background The second track contains the underlying theory derivations and some more advanced material Subsequent chapters deal with the demand for food and other groups of goods the system wide approach and the demand side of EDM and CGE models This convenient source book will be valuable to students consultants business economists and government policy analysts Clarity of exposition and economic intuition is emphasised throughout In this remarkable book the authors bridge the gap between sophisticated consumer demand theory and the practical world of economic modeling Their guidance will be invaluable to anyone aiming to shed light on the economic impact of public policies Thomas W Hertel Distinguished Professor and Executive Director Center for Global Trade Analysis Purdue University The elasticity of demand is a key parameter in economics whether for micro studies or large scale models This book illuminates on short cut approaches for measuring this elasticity and provides derivations and applications It is a valuable resource for both students and seasoned economists Paul Burke Professor and Head Arndt Corden Department of Economics and Deputy Director Crawford School of Public Policy ANU College of Law Governance and Policy Australian National University This book endears itself to me with its honest approach to determining elasticities for use in policy analysis In Chapter 1 it tells us about the rule of one half if you can't do any better set own price elasticities for household demands for broadly defined commodities at 0.5 Then through ten chapters Ken Clements and his co authors demonstrate that you can do better by combining economic theory with relatively straightforward econometrics The book deserves wide readership among applied economic modellers who want to take their field forward by supplementing judgement with statistical evidence Peter Dixon AO Professor Centre of Policy Studies Victoria University

Economics of Micronutrient Malnutrition Olivier Ecker, 2009

Micronutrient malnutrition is a serious public health problem especially in developing countries Hence evaluating the

nutritional impacts of market and policy changes requires more than just a calorie focus This work extends the traditional perspective and analyzes the effects of income food price and sociodemographic developments on vitamin and mineral adequacies at the household level The author proposes two approaches to estimate income and price elasticities of nutrient consumption and presents a procedure for assessing the nutrition situation in populations based on food consumption data Using both approaches demand models are applied in two empirical studies with data from rural East Africa and Malawi Results suggest that the nutritional status is highly income responsive Price elasticities are lower in absolute values albeit with notable differences between nutrients Policy implications are discussed
