Carmen Díaz-Roldán,Laura Pérez Ortiz,2020 The promotion of economic development is a recurrent area of interest both in the policy ground as well as in the academic arena Developed and developing countries are aware that there are pending issues to be solved Trying to offer a response to some of them the Sustainable Development Goals SDGs or the 2030 Agenda of the United Nations balance social economic and environmental factors which are in turn the pillars for sustainable economic growth In this context social changes innovations and technological advances would play a crucial role But the needed changes require adequate economic policies aimed to promote sustainable economic development Joint to this the past financial and economic crisis has questioned the usefulness of several paradigms accepted by the academy and has also favored the research on economic policies In the current globalized world the new approaches to conduct economic policies and the practical lessons that emerge from empirical analysis are revealed as necessary tools to understand international economic relations In this book we provide some contributions that show the most recent approaches showing to which extent economic policies would overcome a sustainable economic development First we will review the current situation and the perspectives of development theories and policies Next we will show the scope of both demand side and supply side policies when trying to achieve economic development Finally we will show several examples of how developing countries from the Latin America area are dealing with the current situation after the economic crisis in light of the Sustainable Development Goals Our results provide a vast and comprehensive analysis of the situation the perspective and the proposals for the future of the economic policies for development

The Cornerstone of Development Jamie Schnurr,0 Idrc,Susan Holtz,Greg Armstrong,Anne K Bernard,2023-07-14 Sustainable development quickly became the universal goal for environmentalists in the 1990s motivated by the 1988 Brundtland Report and the 1992 Earth Summit in Rio When the time came to bring theory into reality sustainable development revealed far more complexity than first anticipated To attain sustainable development in the full sense of the phrase meeting present needs without compromising the resources needed for future societies environmental and social concerns would need a constant presence in all major economic decisions The Cornerstone of Development Balancing Environmental Social and Economic Imperatives profiles many of the first attempts to implement sustainable development initiatives worldwide The model Canada s experience with multistakeholder decision making Under the guidance of Canada s National Task Force on Environment and Economy nationwide and provincial round tables brought government officials together with corporate officers to formulate sustainable development guidelines Authorized by the Canadian government to serve as an Agenda 21 organization the International Development Research Centre IDRC subsequently researched the feasibility of adapting the multistakeholder approach to the needs and practices of developing countries The results are in these pages valuable case histories from Africa Latin America Asia and Canada each

recounting the risks and benefits from integrating environmental social and economic policies When IDRC members were asked for ways to address environmental sustainability they had few examples to follow and little evidence that such endeavors could be fulfilled The research and problem solving efforts they produced are now collected here for the guidance of other environment development balance programs worldwide

The Economics of Sustainable Development Ian Goldin, L. Alan Winters, 1995-02-24 This book applies rigorous economic analysis to the question of sustainable development It considers the inter relationship between growth and sustainability showing that one does not necessarily exist to the detriment of the other Sustainability may be measured and defined in national accounting terms and the contributors explore a potentially powerful theoretical definition Case studies on Morocco and China examine some of the domestic policy requirements of sustainability revealing the desirability of quite complex combinations of policies International policy aspects of sustainability are considered such as technology transfers and the establishment of workable agreements to reduce global pollution The volume demonstrates the need to build the sustainability debate on sound economic foundations and the ability of economists to provide such foundations

Economic Policies for Sustainable Development Thomas Sterner, 2014-01-15 [Economics of the SDGs](#) Edward B. Barbier, Joanne C. Burgess, 2022-08-12 This is the first book that employs economics to develop and apply an analytical framework for assessing progress towards the Sustainable Development Goals SDGs The authors explore the historical context for the underlying sustainability concept develop an economics based analytical framework for assessing progress towards the SDGs and discuss the implications for sustainability policy and future research Economics is concerned with analysing the trade offs in allocating scarce means to achieve various ends Thus economic methods are ideally suited to assessing how progress towards one or more SDGs may come at the expense of achieving other goals Such interactions are inevitable in meeting the 2030 Agenda over the next decade given that the SDGs include different economic social and environmental elements Although it may be possible to make progress across all 17 goals by 2030 it is more likely that improvement toward all goals will be mixed For example we may have reduced poverty or hunger over recent years but the way in which this progress has been achieved e g through economic expansion and industrial growth may have come at the cost in achieving some environmental or social goals On the other hand progress in reducing poverty is likely to go hand in hand with other important goals such as eliminating hunger improving clean water and sanitation and ensuring good health and well being Assessing these interactions is essential for guiding policy so that countries and the international community can begin implementing the right set of environmental social and economic policies to achieve more sustainable and inclusive global development

Economic Policies of the New Thinking in Economics Philip Arestis, Malcolm Sawyer, 2014-10-20 The financial crisis and the great recession have generated the need for new thinking in economics and for new economic policies to secure sustainable and equitable economic development. The new thinking in economics is an interdisciplinary approach to economic problems that acknowledges and respects insights and analyses from other disciplines and recognizes complexity and evolutionary theory as relevant for understanding economic systems and economic behaviour. New Economics is concerned with institutional behaviour, expectations and uncertainty as opposed to traditional economics with its emphasis on equilibrium, mathematical formalism and deterministic solutions. With the financial crisis brought on by the unrestrained pursuit of personal and corporate profit sanctioned by traditional economics, this is an opportune moment to establish a new way of approaching economic understanding based on new economic theory. It is also a good time to instigate new ideas on

the approach to economic policy across a wide range of areas such as macroeconomic and global governance employment and unemployment social security and pensions This book is devoted to developing economic policies from the new thinking It was originally published as a special issue of the International Review of Applied Economics *Land Resource Economics and Sustainable Development* G. Cornelis Van Kooten, 2011-11-01 This text seeks to provide an introduction to issues of land use and the economic tools that are used to resolve land use conflicts In particular tools of economic analysis are used to address allocation of land among alternative uses in such a way that the welfare of society is enhanced Thus the focus is on what is best for society and not what is best for an individual a particular group of individuals or a particular constituency What this text seeks to provide is a balanced and just approach to decision making concerning allocation of land from the Introduction Land Resource Economics and Sustainable Development has already been tested in a slightly different format on over 400 students in a number of upper level undergraduate and lower level graduate courses It presents a pragmatic approach to the issues of land use and sustainable development and breaks away from the narrow focus of most economics texts on resources as it takes into account current political and ecological concerns while at the same time providing readers with the essential economic tools for a rational discussion of land use conflicts Land Resource Economics and Sustainable Development addresses a wide range of issues not covered in other economics texts These include soil erosion wetlands preservation global climatic change urban rural conflict urban land use range management forest management and public land management The broad scope and practical perspective make Land Resource Economics and Sustainable Development useful to students interdisciplinary researchers and professional economists and managers working in the fields of economic development the environment agriculture and forestry Both U S and Canadian data are used throughout the text to illustrate the issues discussed in the book Economic Policies Amelia Scott, AI, 2025-03-29 Economic Policies examines the profound and lasting impact of governmental financial strategies throughout history From the evolution of taxation systems to the establishment of trade policies the book explores how past decisions continue to shape our global financial systems Did you know that some ancient taxation methods still influence modern progressive structures Or that mercantilism once a dominant trade philosophy has left its mark on contemporary international trade agreements This book meticulously details how governments have historically intervened to foster economic stability looking at approaches to managing inflation and averting financial crises By analyzing macroeconomic indicators and historical financial records Economic Policies provides a comprehensive overview of economic history bridging the gap between economic theory and practical application Each section builds upon previous knowledge starting with fundamental economic principles before delving into specific historical periods and case studies such as the fiscal policies of the Roman Empire and the Bretton Woods system Structured to provide a comprehensive exploration of economic history the book dedicates chapters to significant periods or case studies It concludes with a synthesis of these historical analyses drawing broader lessons about the relationship between government

intervention and economic performance particularly within Western economies This approach equips readers with a framework for critically evaluating the role of government in shaping economic outcomes and encourages informed discussions about current economic policy debates *New Challenges in Economic Policy, Business, and Management* Anna Ujwary-Gil, Marta Gancarczyk, 2020-01-01 The first part of this volume broadens the understanding of contemporary industrial policy in local regional national and international contexts The chapter by Wojnicka Sycz 2020 undertakes one of the most important challenges in RIS3 i e the evaluation of the impact of regional SS industries on the development of Polish regions Based on the spatial panel models for 2012 2017 she reveals the positive impact of SS industries employment dynamics on regional GDP per capita The chapter responds to the research gap in a direct measurement of how SS areas affect regional development The results provide the rationale for policy makers to pursue these strategies further The chapter contributes to regional New Industrial Policy by proving the efficiency of SS in strengthening regional performance Factors and barriers to the development of smart mobility in mediumsized Polish cities are the focus of the chapter by Kachniewska 2020 The author applies a comprehensive set of methods to tackle this issue and identifies the conditions for smart mobility drawing primarily on expert opinions The results enable a natural generalization of the identified determinants to the similar context of Polish towns the more important that the research on medium cities is much rarer than studies on metropolises This contribution belongs to the research streams of city governance and databased services which are closely connected to and dependent on industrial digital transformation Moreover smart mobility addresses the objective of environmental protection one of the crucial targets of NIP Godlewska Dziobo 2020 performs international comparisons between Central and Eastern European Countries in 2020 2018 Particularly she focuses on the sectoral transformation of the employment structure in these countries Besides the important observations of spatial dynamics in sectoral structures the chapter points to the increased importance of services relative to manufacturing in contemporary structural transformations Thus it justifies the expanded scope of New Industrial Policy that encompasses not only industry recently refreshed with 4 0 Revolution but also services particularly the digital ones The chapter by Czech 2020 identifies the impact of global debt on the national amounts outstanding of credit default swap contracts CDS in nonfinancial institutions She finds the dynamics of the CDS notional amounts outstanding in response to global household indebtedness and total non financial sector indebtedness in domestic banks This contribution brings valuable practical insights about the core and dynamics of CDS and their usefulness in alleviating risks in international exchange We find this input particularly relevant for industries and enterprises operating in global value chains Widera 2020 performs a spatial analysis of the induced population potential of the communes in the Opolska region in 2000 and 2018 The econometric analysis revealed both the own potential of the communes and the interactions with neighboring communes to develop this potential These findings are important to theorize about the bottom level sources of territorial units potential both internal and those stemming from spatial

interactions We find these conclusions relevant to understand local level origins of regional transformations as well as interdependencies among local territorial units The next two parts of this volume present micro level and bottomup contexts for industrial policy Particularly these are the insights from management and business research and from the research on governing various stakeholder interests and networks In the second part based on management and business theory and empirical evidence the authors discuss human resource and technological challenges faced by the contemporary industry Potoczek 2020 performs a bibliometric research to recognize the advancement of the process approach in organizations She finds the research on process improvement as emerging The major research community in that area belongs to the IT field while management researchers are still a minor group The author recommends the increased interest from the management field as conducive to the 4 0 transformation of organizational processes These results provide policy relevant input to the understanding of how academic research tackles digital transformation in organizational processes The chapter by Igielski 2020 uses a survey among a sample of large enterprise senior managers headquartered in Poland to check whether and how they develop employee skills for the challenges of Industry 4 0 The results are pessimistic since they reveal the lack of adaptive and developmental actions in this regard Nevertheless there is also a positive sign namely the awareness of the challenges posed by the 4 0 revolution Thus the chapter is valuable for the recommendations as to competence development in industrial transition to the digital economy Flak 2020 presents an interesting test for the system of organizational terms as to its usefulness in the practice of motivating people and in a dedicated software Based on a research experiment in real life business settings the author proves the applicability of theory driven organizational terms in software applications supporting managers in their motivating functions The chapter contributes important observations as to the interrelations among managerial and technological resources in motivating employees Sztorc 2020 investigates lean management tools at hotels in Poland based on a large sample of hotel representatives The results are helpful in understanding the types of lean management tools as well as their major targets in the researched organizations The input of the study rests in filling the research gap as to the particular tools of lean management applied in the hotel industry to improve services and processes The focus of this chapter on a particular industry provides a relevant basis for further application and upgrading of this service sector The chapter by Mazurkiewicz 2020 offers an assessment of the impact of national culture on career orientation and career values among Polish and Chinese students of economics Surprisingly the value system does not differ much between the two national samples despite the distinct characteristics of the two national cultures according to Hofstede's method Consequently the author assumes national culture as moderator of career values rather than their determinant These results provide a contribution to the understanding of job motivations among future corporate employees a critical determinant of all industrial transitions Kowalik 2020 investigates the economic benefits perceived by student participants of scientific projects Based on the survey the author reveals students' recognition of scientific projects as bringing economic

effects The study offers practical implications for young people engaging in research activities as well as for research policy that might acknowledge additional important outcomes besides purely scientific objectives The third part discusses how governing networks and interests can ensure sustainable and socially responsible industries and enterprises Sectoral and industrial collaborations are supposed to enhance industrial convergence EOCIC 2019 In this vein Lis 2020 focuses on collaborative attitudes in clusters and technological parks Cluster organizations are established to rip the localization and agglomeration economies as well as synergies from cooperative links Despite some history of operations the surveyed Polish cluster initiatives and technology parks still reveal low development of enterprise cooperation The author suggests self evaluation of management and participants of the researched organizations to understand the accomplished level of collaboration and derive practical implications This contribution is important to understand the performance of some organizational measures of industrial policy and their real input to industrial transformation The chapter by Kowalczyk 2020 investigates sociocultural conditions of CSR practices in the construction industry of selected European countries Based on a survey with a large convenience sample the author confirms the strength of stakeholder pressure on CSR practice as well as the mediating role of company culture in this relationship At the same time country differences were indicated as significant for CSR practice and worth further explanation of its variance This study is valuable for the explanation of interests and stakeholder pressure affecting a particular industry thus determining the development conditions of that industry Another industry specific study has been proposed by Kurzak Mabrouk 2020 who focuses on food businesses This chapter addresses the critical strategic direction of NIP that refers to sustainable and responsible growth with regard to environmental protection The author performed the interviews with top and middle managers of a large representative sample of Polish food companies The findings are optimistic since the majority of companies undertake the efforts towards comprehensive sustainable development strategies voluntarily and not only due to legal enforcement Still the researched enterprises do not fully apply these strategies as yet Resonating with the study by Lis 2020 Flieger 2020 identifies network types according to the collaboration maturity level in a local government unit The research on collaborative networks in public organizations still remains unique Therefore this study fills the research gap The author uses a casebased approach to identify the network features that change according to the maturity level of relationships The findings are useful for the practice of developing collaboration in local governments and contribute to our understanding of the context for industrial development

The Architecture of Green Economic Policies P.K. Rao, 2010-06-14 After numerous scientific papers and books on most aspects of climate change and the design of pro environmental policies including some that suit some industrial lobby or another is there relevance for another book and what is the purported role of this one Is this yet another academic exercise or much ado about nothing Do we have to bother designing green economic policies and incur transaction costs of this effort Are there shortcomings of existing policies if we care to live happily on this planet Is it not enough to care for the current

generations so that the future generations can take care of themselves or even be given the incentives for innovations for lack of fully provided resources What can we do about the green economic policies and what are these anyway What trade offs if any are relevant in foregoing some benefits and in incurring some costs not all of which can be expressed in monetary units What are the overarching objectives and priorities in the current context What economic and other approaches are relevant for attaining the objectives These are some of the questions the author reflected in writing this book
