Through an institutional analysis of the ruling elite's policy institutionalization, it tries to answer three main questions: Will China's economic reforms lead to a meaningful political reform? Will economic freedom lead to political freedom? Will economic development lead to political democratization? The major findings from the institutional analysis of the dynamic interactions between political actors and institutions suggest that China is moving closer towards democracy. The Chinese economy has undergone an unprecedented period of growth and development since the reform and opening up in the late 1970s, a process which the hallmarks of neoclassic economic theory have often proved inadequate to explain. Examining the Chinese economy in the light of Chinese history and the development of the world economy as a whole, the book charts the milestones and critical reforms of China's economic development, providing insights into unique attributes as well as more generic patterns. The discussion covers multiple hot topics in the field, including the so-called Great Divergence, dual-sector economic development, real-world experience of the reform and opening up, rural reform, urbanization, economic reform, poverty reduction, the latter-day slowdown of China's economic growth, and China's role in and response to globalization, global supply domination, and other headwinds.
