**Mechanistic Approaches to Interactions of Electric and Electromagnetic Fields with Living Systems** Martin Blank, E. Findl, 2013-11-11 Although there is general agreement that exogenous electric and electromagnetic fields influence and modulate the properties of biological systems there is no consensus regarding the mechanisms by which such fields operate It is the purpose of this volume to bring together and examine critically the mechanistic models and concepts that have been proposed We have chosen to arrange the papers in terms of the level of biological organization emphasized by the contributors Some papers overlap categories but the progression from ions and membrane surfaces through macromolecules and the membrane matrix to integrated systems establishes a mechanistic chain of causality that links the basic interactions in the relatively well understood simple systems to the complex living systems where all effects occur simultaneously The backgrounds of the invited contributors include biochemistry biophysics cell biology electrical engineering electrochemistry electrophysiology medicine and physical chemistry As a result of this diversity the mechanistic models reflect the differing approaches used by these disciplines to explain the same phenomena Areas of agreement define the common ground while the areas of divergence provide opportunities for refining our ideas through further experimentation To facilitate the interaction between the different points of view the authors have clearly indicated those published observations that they are trying to explain i e the experiments that have been critical in their thinking This should establish a consensus regarding important observations In the discussion of theories     *Orthopaedic Biomaterials in Research and Practice* Kevin L. Ferdinando Bersani, 2012-12-06 In the last few decades the research on bioelectromagnetics has expanded worldwide About one thousand researchers are now working in the field in a variety of institutions throughout the world including medical biological engineering and technical laboratories and protection agencies After many years of research a clear picture is now emerging Initially the research was mainly interested in the therapeutic applications of ELF electric and magnetic fields and the RF range was mainly taken into consideration with respect to thermal effects only Then the growing body of biological effects of ELF fields on cells and biological tissues particularly for the repair processes in bone have drawn the attention of researchers to non thermal effects ranging from static fields to microwaves A specific field of interest that has been the object of a large debate in the last twenty years has been the potential health risk associated with electric power production and distribution and more recently with domestic and industrial appliances In the last few years the explosion of the market for cellular phones has highlighted the issue of possible health dangers related to their use and to the widespread presence of base stations The first World Congress on Electricity and Magnetism in Biology and Medicine was held in Orlando Florida in 1992 and collected the widest amount of contributions from almost all the major researchers involved in the field
