Congress. House. Committee on House Administration, 2003 Competition Law and Regulation of the EU Electronic Communications Sector Liyang Hou, 2012-09-01 This book brings satisfying definition and clarity to this field at last Exploring the substantive differences between competition law and sector specific regulation after the methodological integration it presents the first

detailed analysis of the many hundreds of notifications and Commission letters generated under the Article 7 procedure identifying the most relevant cases dealing with market definition market power and remedies It compares these decisions with relevant competition law cases and highlights elements with a bearing on sector specific regulation It also offers hugely valuable guidance through the vast amount of documents in the Commission's CIRCA database Topics and issues raised include the following definition of product markets delineation of geographic markets including sub national different practices in relation to assessing single market power and collective market power and competition problems such as refusal to deal margin squeeze non price discrimination and excessive pricing There can be little doubt that this is the new reference point for researchers and practitioners in this domain By systematically categorizing the concepts and legal criteria and building a solid theoretical framework on the intersection of competition law and sector specific regulation the author has created a resource that is sure to be welcomed by all those involved in regulation of electronic communications markets and network industries in general academic scholars telecommunications regulators at the EU and Member State levels competition authorities law firms specializing in IT communications law practitioners in IT and telecommunications companies and consultants in the sector The book will also prove very useful for scholars and practitioners in other parts of the world interested in comparing the EU system with their own

*Achieving the Internal Market for e-communications* Andrea Renda, 2008 Over the past two years the debate on the review of the EU regulatory framework for electronic communications has become hectic After the European Commission adopted its proposed set of measures in November 2007 the European Parliament has shown an unprecedented interest in topics such as spectrum policy functional separation of the incumbents networks the creation of a new European authority on telecoms etc After the successful experience of the first CEPS Task Force on Policy Challenges for the Information Superhighway which ended in June 2006 a new Task Force on Achieving the Internal Market for e communications was launched by CEPS with the explicit aim to provide expertise to Members of the European Parliament in their reading of the proposed review The Task Force was chaired by Magnus Lemmel former Acting Director General at DG Enterprise European Commission and currently Senior Advisor at KREAB This report summarises the results of the opinions that were expressed over five meetings the last two of which took place inside the European Parliament This highly influential report was drafted by Andrea Renda Senior Research Fellow at CEPS

and Services,1978      **The Electronic Communications Code and Property Law** Falcon Chambers,2018-10-11 Life now without access to electronic telecommunications would be regarded as highly unsatisfactory by most of the UK population Such ready access would not have been achieved without methodical and ultimately enforceable means of access to the land on which to install the infrastructure necessary to support the development of an electronic communications network Successive governments have made such access a priority regarding it as a principle that no person should unreasonably be denied access to an electronic communications network or electronic communications services The enactment of the Telecommunications Act 1984 and its revision by the Communications Act in 2003 have played their role in the provision of an extensive electronic infrastructure in the UK while their reshaping by means of the Digital Economy Act 2017 will continue that process Throughout that process a little publicised series of struggles has taken place between telecommunications operators and landowners as they seek to interpret the Electronic Communications Code by which their rights and obligations have been regulated This book describes the problems that accompanied the Old Code which will continue to regulate existing installations and agreements and the intended solutions under the New Code The eminent team of authors explain the background provisions and operation of the old code and the new one providing practical and jargon free guidance throughout It is sure to become the reference on this topic and is intended as a guide for telecommunications operators land owners and of course for their advisers in the legal and surveying professions All members of Falcon Chambers comprising nine Queen s Counsel and 30 junior barristers specialise in property law and allied topics including the various incarnations of the Electronic Communications Code Members of Falcon Chambers including all the authors of this new work have for many years lectured and written widely on the code and have appeared acting for both operators and landowners in many of the few reported cases on the subject of the interface between property law and the code including for example *Geo Networks Ltd v The Bridgewater Canal Co Ltd* 2010 *Geo Networks Ltd v The Bridgewater Canal Co Ltd* 2011 *Crest Nicholson Operations Ltd v Arqiva Services Ltd* 2015 *Brophy v Vodafone Ltd* 2017      Electronic Communications Privacy Act of 1986 United States,1987      *Privacy in Electronic Communications* United States. Committee on the Judiciary,2000      **Cyber Law in Sweden** Christine Storr,2021-10-21 Derived from the renowned multi volume International Encyclopaedia of Laws this practical guide to cyber law the law affecting information and communication technology ICT in the Sweden covers every aspect of the subject including intellectual property rights in the ICT sector relevant competition rules drafting and negotiating ICT related contracts electronic transactions privacy issues and computer crime Lawyers who handle transnational matters will appreciate the detailed explanation of specific characteristics of practice and procedure Following a general introduction the book assembles its information and guidance in seven main areas of practice the regulatory framework of the electronic

communications market software protection legal protection of databases or chips and other intellectual property matters contracts with regard to software licensing and network services with special attention to case law in this area rules with regard to electronic evidence regulation of electronic signatures electronic banking and electronic commerce specific laws and regulations with respect to the liability of network operators and service providers and related product liability protection of individual persons in the context of the processing of personal data and confidentiality and the application of substantive criminal law in the area of ICT Its succinct yet scholarly nature as well as the practical quality of the information it provides make this book a valuable time saving tool for business and legal professionals alike Lawyers representing parties with interests in the Sweden will welcome this very useful guide and academics and researchers will appreciate its value in the study of comparative law in this relatively new and challenging field      *The Electronic Communications Privacy Act* United States. Congress. Senate. Committee on the Judiciary, 2011      **EC Competition and Telecommunications Law** Andreas Bartosch, Jens-Daniel Braun, 2009-01-01 This new volume updates the groundbreaking analysis of its first edition in 2002 when the EC common regulatory framework for electronic communications networks and services had just entered into force So much has changed in the intervening years that that this new edition bears little resemblance to its predecessor with every chapter either extensively altered or entirely new It remains however the most detailed and comprehensive overview available of the application of the EC Treaty's competition rules in the markets for telecommunications and audiovisual media and of the applicable regulatory framework In thirteen chapters each contributed by one or more noted legal authorities in the field the second edition of EC Competition and Telecommunications Law covers the full range of EC telecommunications law across all major areas of both institutional and substantive law both on the international and EC levels including the following State aid the merger control regulation justification for sector specific regulation in EC competition law network access authorizations and privileges and mobile telephony Relevant EC media and communications law and relevant aspects of EC competition law are dealt with in detail While some chapters focus on competition law others deal primarily with sector specific regulation There is practical guidance throughout on procedural matters alongside analysis of the substantive provisions Well known in its first edition this thoroughly revised and updated version continue to be vital reading for practitioners in particular those specializing in European competition law and for company and in house lawyers who are seeking advice on how European law affects their business As a detailed analysis of the basic legislative and regulatory framework of European telecommunications law it will be an invaluable reference work for lawyers judges regulators and policymakers in all the EC Member States as well as for students and teachers of European law      **Margin Squeeze in the Electronic Communications Sector** Anna Renata Pisarkiewicz, 2018-06-22 Margin squeeze is a form of abuse of a dominant position in which a vertically integrated company reduces the margin between the price charged to competitors and the price charged to consumers which can have the effect of excluding a competitor from the market In the

decade or so since the liberalisation of network industries margin squeeze has become a major source of concern among competition authorities and courts particularly pronounced in the electronic communications sector Because some of the adopted decisions show significant inconsistencies in approach and legal certainty remains elusive in this area this book which provides an extremely thorough analysis is both timely and of great practical value The author provides an in depth examination of margin squeeze allegations in the electronic communications sector with a view to developing a more advanced and comprehensive analysis of principles which should guide ex post assessment of margin squeeze Issues and topics covered include scope of intervention in margin squeeze cases both for national regulatory and national competition authorities conditions for sanctioning margin squeeze under Article 102 methodological and practical difficulties in identifying a margin squeeze methodology employed in margin squeeze cases and its regulatory aspects assessment of the ability and incentives of regulated firms to engage in a margin squeeze and situations when competition law is used to address the deficits of regulation and regulatory failures It also includes a critical comparison of the vertical foreclosure analysis undertaken in margin squeeze cases with the approach adopted in the EU Non Horizontal Merger Guidelines Throughout the analysis margin squeeze treatment in the European Union and its Member States is examined in light of the diverging approach adopted by the US Supreme Court The increasing complexity of the electronic communications market can only further confound an already complex assessment of price squeezes and one can expect that claims of anticompetitive margin squeeze in liberalised network industries will continue to be high on the enforcement agenda of competition authorities for years to come In light of the need for a coherent or at least predictable sentencing policy to provide relative legal certainty the research in this book proves invaluable The analysis and conclusions discussed in this book will be welcomed by policymakers regulators and lawyers working in the areas of competition law and electronic communications law
