Quinn, 2012-12-06 Biofeedback training is a research methodology and training procedure through which people can learn voluntary control over their internal physiological systems It is a merger of multiple disciplines with interest deriving from many sources from basic understanding of psychophysiology to a desire for enhanced self awareness The goals of biofeedback are to develop an increased awareness of relevant internal physiological functions to establish control over these functions to generalize control from an experimental or clinical setting to everyday life and to focus attention on mind body integration Biofeedback is explored in many different settings In the university biofeedback equipment and applications can be found in the departments of experimental and clinical psychology counseling physiology biology education and the theater arts as well as in the health service student infirmary Outside the university biofeedback may be found in different departments of hospitals such as physical medicine private clinics education and self awareness groups psychotherapy practices and elsewhere Its growth is still expanding and excitement is still rising as a result of biofeedback's demonstration that autonomic functions can be brought under voluntary control and that the long standing artificial separation between mind body and consciousness can be disproven *Subject Guide to Children's Books in Print* 1997 Bowker Editorial Staff, R R Bowker Publishing, 1996-09 *Books in Print* ,1977 **Evaluation of Clinical Biofeedback** Rogers, 2012-12-06 This comprehensive survey will be useful for anyone who seriously wants to learn more about the current therapeutic status of biofeedback therapists physicians considering a referral well educated prospective patients teachers students and research workers But readers with different needs should use it in different ways For a quick overview of a large field one should turn to the Introduction and Summary and Conclusions sections The reader interested in a specific disease should look for the proper section in the Table of Contents and then turn to the overall summary at the end of that section and also the briefer summaries that are given in the last paragraph of many subsections whenever sufficient data are available The reader who wants more information should read the entire chapter The serious student or research worker for whom the book will be most valuable will want to read more of the main volume and at least to sample the Appendix to see the kinds of information

that can be mined from it When patients are satisfied with a new treatment and seem to be improved by it why bother with any additional evaluation The reason is that history has shown over and over again that new forms of treatment initially can be used enthusiastically for many conditions with apparent success only to have the pendulum swing in the opposite direction from overenthusiasm to complete disillusionment
