*The Financial and Economic Crises* Benton E. Gup, 2010-01-01 The 2007 financial and economic crisis that began in the United States and quickly spread around the world differed from earlier crises in a number of significant ways This book examines the causes of these events in the US and their impacts on North America Europe Asia and Australia As with previous crises real estate booms and busts and excessive financial leverage played key roles however the most recent crisis had many unique aspects to it all of which are explored here in depth This includes the role played by large international banks shadow banks increased global liquidity population growth and other factors

Collectively these factors contributed to interconnected economies and financial markets to an extent that never existed before. The net result was the unprecedented ripple effect of the crisis from the US and into the rest of the world. The impact in the US was significantly different than the impact in Canada, Japan, Spain and other countries. Significantly, the global effects of the crisis varied widely from country to country as did government responses to the crisis. The contributors to this book, international academics, bank regulators and practitioners, critique the crises and important international regulatory issues from the point of view of various countries. Academics, regulators, legislators and financial practitioners will do well to add this book to their shelves. *A Handbook of Alternative Monetary Economics* Philip Arestis, Malcolm C. Sawyer, 2006

Consists of over 30 major contributions that explore a range of work on money and finance. The contributions in this handbook cover the origins and nature of money, detailed analyses of endogenous money, surveys of empirical work on endogenous money and the nature of monetary policy when money is endogenous. **The Political Economy of Emerging Markets** J. Santiso, 2003-08-22. This book takes a cross disciplinary look at the financial markets of emerging markets in Latin America. The author wants to disassemble the black box that is the financial market: what are the motivations and interests of the various actors, both institutional and individual? How do these interact with each other? How does this information help us understand the Mexican crisis in the 90s and the current crisis in Argentina? The author has conducted extensive interviews with brokers, asset managers, economists, strategists and analysts in the US, UK, Europe and Latin America, providing significant material for this study. *Hedge Funds and Systemic Risk* United States. Congress. House. Committee on Financial Services, 2007. *From Asian to Global Financial Crisis* Andrew Sheng, 2009-09-28. This is a unique insider account of the new world of unfettered finance. The author, an Asian regulator, examines how old mindsets, market fundamentalism, loose monetary policy, carry trade, lax supervision, greed, cronyism and financial engineering caused both the Asian crisis of the late 1990s and the current global crisis of 2008-2009. This book shows how the Japanese zero interest rate policy to fight deflation helped create the carry trade that generated bubbles in Asia, whose effects brought Asian economies down. The study's main purpose is to demonstrate that global finance is so interlinked and interactive that our current tools and institutional structure to deal with critical episodes are completely outdated. The book explains how current financial policies and regulation failed to deal with a global bubble and makes recommendations on what must change.
