Heating Service Design:

Heating Services in Buildings David E. Watkins, 2011-09-26 Water based heating systems are efficient flexible versatile and offer many advantages over other heating systems These advantages fast response good controllability efficient zonal heating and largely silent operation all require that initial design installation commissioning and maintenance be carried out to a high standard by competent engineers Heating Services in Buildings provides the reader with a detailed and thorough understanding of the principles and elements of heating buildings using modern water based heating systems A key theme of the book is that there is little difference in the approach to the design and engineering between domestic and commercial installations The author's detailed but highly practical approach to the subject ensures there is sufficient information for students from both a craft background and those with more academic backgrounds to understand the material This approach is complemented by straightforward easy to use diagrams Heating Services in Buildings supports a range of educational courses including degree level building services engineering NVQ Level 4 Higher Professional Diploma in Building Services Engineering City Guilds supplementary heating course and the Heating Design and Installation Course accredited by the European Registration Scheme ERS

Models, Methods and Tools for Product Service Design Laura Cattaneo, Sergio Terzi, 2018-08-30 This open access book summarizes research being pursued within the Manutelligence project the goal of which is to help enterprises develop smart social and flexible products with high value added services Manutelligence has improved Product and Service Design by developing suitable models and methods and connecting them through a modular collaborative and secure ICT Platform The use of real data collected in real time by Internet of Things IoT technologies underpins the design of product service systems and makes it possible to monitor them throughout their life cycle Available data allows costs and sustainability issues to be more accurately measured and simulated in the form of Life Cycle Cost LCC and Life Cycle Assessment LCA Analysing data from IoT systems and sharing LCC and LCA information via the ICT Platform can help to accelerate the design of product service systems reduce costs and better understand customer needs Industrial partners involved in Manutelligence provide a clear overview of the project's outcomes and demonstrate how its technological solutions can be used to improve the design of product service systems and the management of product service life cycles
