Hedonics Of Taste:

Hedonics of Taste Robert C. Bolles, 2014-02-04 A study of hedonism could conceivably operate on a massive scale This book however concentrates specifically on the hedonics of taste The editor notes some important reasons for limiting the argument in this manner First of all this is an area of hedonics in which a handful of experimenters continued to do research during a period when hedonism might have been lost altogether Secondly the past ten years have seen quite a number of researchers turn their attention to taste preferences and so it seems appropriate to celebrate the fact that new findings can be incorporated into a very old conceptual framework the ancient concept of hedonism The contributors approach their subject from many different angles Historical conceptual and methodological chapters are presented developmental aspects psychological substrates and the social considerations of hedonics are discussed This volume offers viewpoints from dataphiles and theorists mechanists and cognitivists unifiers and disrupters a diversity that reflects the vital state of psychology today *Selected Sensory Methods: Problems and Approaches to Measuring Hedonics* Kuznicki JT., 1982

Taste Hedonics and the Intake of Alcohol and Food Anna Söderpalm, 2000 **Handbook of Perception Volume 6A** Edward C. Carterette, 2012-12-02 Handbook of Perception Volume VIA Tasting and Smelling focuses on the psychophysics of tasting and smelling and covers topics ranging from food technology and the neurophysiology of taste to the chemistry of odor the neural code the olfactory process and chemical signals in the environment This volume is organized into five sections encompassing 10 chapters and begins with a historical overview of taste research followed by a discussion on the biophysics and chemistry of taste and its phylogenetic basis in vertebrates The focus then shifts to the nature of taste qualities the psychophysical methods of studying them and the influence on taste sensation of factors such as intensity duration and area of stimulation The important phenomenon of adaptation is well covered with attention to the role of water The book methodically introduces the reader to the pleasantness or unpleasantness of a food the physicochemical basis of olfaction information processing in the olfactory nerve pathway and the relationship between molecular structure and odor A chapter on the extraneous stimulation caused by industrial processes the psychophysical foundation for applications of olfactory research and real and potential applications in the realm of odor abatement concludes the volume This book will serve as a basic source and reference work for psychologists and natural scientists as well as for those who are interested in human perception *Hedonics of Taste-odor Mixtures in Humans [microform] : a Study of Flavor Perception* Lori Ann Whitten, 1995 *Conditioned Taste Aversion* Jan Bures, F. Bermudez-Rattoni, T. Yamamoto, 1998-05-28 Conditioned taste aversion CTA is a robust defence device protecting animals against repeated consumption of toxic food It is characterised by the ability of many animals to learn to avoid certain substances by their sight smell or taste after experiencing an unpleasant or harmful reaction to them CTA is encountered at all levels of evolution with similar forms of food aversion learning found in vertebrate and invertebrate species whose ancestral lines diverged more than 500 million years ago CTA has a number of

unusual properties contrasting sharply with the basic assumptions of traditional learning theories which has brought it increasingly to the attention of neurobiologists interested in neural plasticity In CTA the usual time parameters between stimulus and aversion are relaxed considerably frequently with delays of hours rather than seconds Moreover the critical stage of CTA acquisition may proceed under deep anaesthesia incompatible with other forms of learning In the past decade several pivotal discoveries have considerably advanced our understanding of the neural processes underlying CTA and opened new possibilities for their analysis at the molecular and cellular levels This book written by three of the world's leading researchers in the subject comprehensively reviews the current state of research into conditioned taste aversion The first book of its kind to provide an up to date summary of research into the neuroanatomy pharmacology electrophysiology and functional morphology of CTA it will be welcomed by all researchers and graduate students in the field

Pediatric Food Preferences and Eating Behaviors Julie C. Lumeng, Jennifer O. Fisher, 2018-07-04 *Pediatric Food Preferences and Eating Behaviors* reviews scientific works that investigate why children eat the way they do and whether eating behaviors are modifiable The book begins with an introduction and historical perspective and then delves into the development of flavor preferences the role of repeated exposure and other types of learning the effects of modeling eating behavior picky eating food neophobia and food selectivity Other sections discuss appetite regulation the role of reward pathways genetic contributions to eating behaviors environmental influences cognitive aspects the development of loss of control eating and food cognitions and nutrition knowledge Written by leading researchers in the field each chapter presents basic concepts and definitions methodological issues pertaining to measurement and the current state of scientific knowledge as well as directions for future research Delivers an up to date synthesis of the research evidence addressing the development of children's eating behaviors from birth to age 18 years Provides an in depth synthesis of the basic eating behaviors that contribute to consumption patterns Translates the complex and sometimes conflicting research in this area to clinical and public health practice Concludes each chapter with practical implications for practice Presents the limits of current knowledge and the next steps in scientific inquiry

The Senses: A Comprehensive Reference, 2020-09-30 *The Senses A Comprehensive Reference* Second Edition Seven Volume Set is a comprehensive reference work covering the range of topics that constitute current knowledge of the neural mechanisms underlying the different senses This important work provides the most up to date cutting edge comprehensive reference combining volumes on all major sensory modalities in one set Offering 264 chapters from a distinguished team of international experts *The Senses* lays out current knowledge on the anatomy physiology and molecular biology of sensory organs in a collection of comprehensive chapters spanning 4 volumes Topics covered include the perception psychophysics and higher order processing of sensory information as well as disorders and new diagnostic and treatment methods Written for a wide audience this reference work provides students scholars medical doctors as well as anyone interested in neuroscience a comprehensive overview of the knowledge accumulated on

the function of sense organs sensory systems and how the brain processes sensory input As with the first edition contributions from leading scholars from around the world will ensure The Senses offers a truly international portrait of sensory physiology The set is the definitive reference on sensory neuroscience and provides the ultimate entry point into the review and original literature in Sensory Neuroscience enabling students and scientists to delve into the subject and deepen their knowledge All inclusive coverage of topics updated edition offers readers the only current reference available covering neurobiology physiology anatomy and molecular biology of sense organs and the processing of sensory information in the brain Authoritative content world leading contributors provide readers with a reputable dynamic and authoritative account of the topics under discussion Comprehensive style content in depth complex coverage of topics offers students at upper undergraduate level and above full insight into topics under discussion

Mental Health and Well-Being in Animals Franklin D. McMillan, 2008-06-02 The past few decades have seen a virtual explosion of scientific research in the area of cognition emotions suffering and mental states in animals Studies in the field laboratory and clinical medical practice have amassed an overwhelming body of evidence demonstrating that mental well being is of paramount importance in all aspects of animal care There is no longer any reasonable doubt among researchers that mental health is of equal importance as physical health and animal well being Recent research convincingly shows that physical health is strongly influenced by mental states thereby making it clear that effective health care requires attention to the emotional well being as well as physical Yet for its vast importance mental health in veterinary medicine has to date not been compiled and structured into an organized field or body of knowledge This information so critical to the formal establishment of the field of mental health and well being in animals remains scattered throughout a wide array of scientific journals This book represents the first authoritative reference text bringing together the most up to date information in the variety of subjects comprising the field of mental health and well being in animals Bringing together a host of distinguished experts internationally noted in the fields of animal emotion research animal behavior cognitive science and neuroscience the book represents the first authoritative reference compiling the diverse information on the animal mind and combining the revolutionary advances in the cognitive sciences with the knowledge in veterinary medicine and clinical animal behavior This book takes a descriptive and proscriptive approach to mental health mixing the scientific research with practical information with clinical applications for veterinary health professionals to use in practice

Food Flavors and Chemistry Arthur M Spanier, Fereidoon Shahidi, Thomas H Parliment, Cynthia Mussinan, Chi-Tang Ho, Ellene Tratras Contis, 2007-10-31 Food may be nutritious visually appealing and easy to prepare but if it does not possess desirable flavors it will not be consumed Food Flavors and Chemistry Advances of the New Millennium primarily focuses on food flavors and their use in foods Coverage also includes other important topics in food chemistry and production such as analytical methods packaging storage safety and patents Positive flavor notes are described including ways of enhancing them in food Conversely methods for eliminating and reducing undesirable flavors are

also proposed Packaging aspects of foods with respect to controlling sensory attributes appearance and microbiological safety are discussed in detail There is also a section concentrating on the most recent developments in dairy flavor chemistry This book will be an important read for all postgraduate students academics and industrial researchers wanting to keep abreast of food flavors and their chemistry

Early Nutrition: Impact on Short- and Long-Term Health H. van Goudoever, S. Guandalini, R. E. Kleinman, 2012-07-01 In this book a selected group of international experts review nutritional practices and feeding behaviors in infancy and early childhood They present the latest knowledge on feeding practices during the period considered and their effect on growth development and immediate and long term health One of the main topics discussed involves feeding practices in the newborn critical care unit concentrating on the use of human donor milk and probiotics in the diet of premature and ill newborns Another point of focus is the causes and the effect of an insufficient intake of selected micronutrients such as iron and zinc which is highly prevalent particularly in the developing world Besides this publication contains information on the influence of early feeding habits on the later development of a number of health related issues such as food allergies later food preferences and eating habits obesity bone development the risk of developing celiac disease in genetically predisposed children This volume provides essential reading for pediatricians clinical investigators and health workers interested in the effects of early nutrition on health

Hedonic Eating Dr Nicole Avena, 2015-05-18 Overeating and obesity are on the rise Despite public health warnings availability of diet books and programs and the stigma associated with obesity many people find it difficult to achieve and maintain a healthy body weight While there are many books on the topic of caloric or need based eating obesity and overeating can also result from eating that is not driven by hunger Recent research found that excess food intake is largely driven by the palatability of food and the pleasure derived from eating

Hedonic Eating How the Pleasure of Food Affects Our Brains and Behavior discusses the pleasurable aspects of food intake that may cause and perpetuate overconsumption Broad in its scope this book examines the various behavioral biological and social rewards of food The comprehensive chapters cover topics ranging from the neurochemistry of food reward to the hotly debated concept of food addiction while providing relevant and up to date information from the current body of scientific literature regarding food reward

The Neurobiology of Taste and Smell Thomas E. Finger, W. L. Silver, D. Restrepo, 2000-09-26 Edited by Thomas E Finger Wayne L Silver and Diego Restrepo The ability to detect chemicals in one's surroundings is a vital function for organisms ranging from single cells to insects to humans The explosion of information provided by molecular and cellular biology has contributed greatly to our understanding of how the chemical senses function in these organisms and is the impetus for the second edition of *The Neurobiology of Taste and Smell* This updated edition contains all new chapters by many new contributors although this edition like the first is intended to provide an introduction to the field itself The second edition incorporates the significant strides that have been made with the application of modern cell and molecular techniques It includes the following subjects Chemical sensitivity and sensibility Olfaction Gustation

Genetic models of chemoreception Chemosensory signaling Transduction and the molecular biology of olfaction and taste And much more Covering a wide range of disciplines including neurobiology molecular biology anatomy physiology pharmacology biochemistry and psychology The Neurobiology of Taste and Smell Second Edition provides a comprehensive description of the crucial issues and important developments within each area Students and researchers in neuroscience and cell and molecular biology in addition to new investigators to the field will find the Second Edition an essential reference of updated information **Learning to Smell** Donald A. Hedonic Eating Associate Professor of Neuroscience and Visiting Professor of Psychology Nicole M Avena, Nicole M. Avena, 2025-09-08 Hedonic Eating explores the science and latest research to understand the root cause of overconsumption and the role of pleasure based eating With a comprehensive overview of the factors that may be driving these behaviors this book discusses how the brain is impacted in this ongoing cycle why so many individuals struggle to regulate their intake of highly palatable ultra processed foods and the physiological processes that contribute to overconsumption **Reducing Dietary Sodium and Improving Human Health** Jacqui Webster, 2018-05-18 This book is a printed edition of the Special Issue Reducing Dietary Sodium and Improving Human Health that was published in Nutrients Pleasures of the Brain Morten L. Kringelbach, Kent C. Berridge, 2010 Pleasure is fundamental to well being and the quality of life but until recently was barely explored by science Current research on pleasure has brought about ground breaking developments on several fronts and new data on pleasure and the brain have begun to converge from many disparate fields The time is ripe to present these important findings in a single volume and so Morten Kringelbach and Kent Berridge have brought together the leading researchers to provides a comprehensive review of our current scientific understanding of pleasure The authors present their latest neuroscientific research into pleasure describing studies on the brain s role in pleasure and reward in animals and humans including brain mechanisms neuroimaging data and psychological analyses as well as how their findings have been applied to clinical problems such as depression and other disorders of hedonic well being To clarify the differences between their views the researchers also provide short answers to a set of fundamental questions about pleasure and its relation to the brain This book is intended to serve as both a starting point for readers new to the field and as a reference for more experienced graduate students and scientists from fields such as neuroscience psychology psychiatry neurology and neurosurgery **Handbook of Obesity - Volume 1** George A. Bray, Claude Bouchard, 2023-12-01 The fifth edition of Volume 1 of Handbook of Obesity written by global experts covers the basic science aspects under the broad topic areas of epidemiology etiology and pathophysiology of obesity Divided into 5 sections and detailed in 66 chapters this edition covers the important advances occurring over the past decades With a focus on science of obesity and factors participating in the etiology of obesity this topic is studied from biological behavioural and environmental perspectives Volume 1 is structured into 5 parts Part 1 focuses on the history definitions and prevalence of the obesity It identifies the historical references to

excess weight obesity in art and literature direct and surrogate measurements of adiposity and obesity related traits epidemiology of obesity around the globe and age sex and ethnic variation completes this part of the volume Part 2 explains the biological determinants of obesity It explains the bioenergetics energy dissipation mechanisms and exposure to experimental overfeeding genetic and epigenetic evidence metabolic rates energy expenditure and energy partitioning and the evidence on infections and adiposity Part 3 describes the behavioral determinants of obesity It deals with chapters related to food beverages and ingestive behavior dealing with smoking breast feeding and sleep duration and pattern and sedentary behavior occupational work and leisure time physical activity and obesity Part 4 comprises of chapters explaining the environmental social and cultural determinants of obesity The chapters in this section focus on the role of agriculture and the food industry in the current obesity epidemic social and economic aspects of obesity and ethnic and cultural differences and environmental pollutants Part 5 of this volume discusses the health consequences of obesity The chapters address important topics such obesity and heart disease lipoprotein metabolism insulin resistance and diabetes metabolic syndrome cancer hepatic biology pulmonary functions and arthritis and gout mental health and quality of life growth and health disorders in pediatric populations and on bias and discrimination affecting the obese persons

Alternative Sweet and Supersweet Principles Ram Snehi Dwivedi, 2022-09-24 This book compiles the latest information on different kinds of natural plant based super sweeteners A book on alternative natural super sweeteners is extremely timely and useful especially in light of the decreasing cultivable area ever increasing demand for sucrose and the well identified ills of sugar consumption Every year more than 50 million people die due to diabetes and diabetes associated diseases like cardiovascular kidney disorder liver cancer etc This book describes the use of non saccharide super sweet principles to counter such maladies The readers will get an in depth understanding of different kinds of sweeteners molecular basis of sweetness their general classification plant source with photo plates etc The chapters explain different kinds of super sweet principles This book emphasizes on the propagation cultivation and conservation of NSSS plants NSSSP and extraction of super sweet principles and granting of generally recognised as safe GRAS certificate to sweeteners The concluding chapter describes the eco physiological difference between saccharide super sweet and non saccharide sweet plants The book also describes commercial production of selected potential Natural Super Sweeteners This book will be of great interest to researchers extension workers as well as postgraduate students in Food science nutrition ayurveda plant physiology Unani naturopathy biochemistry and plant breeding It would also be of interest to industry stakeholders in sweetener industry and alternative sweetener manufactures

Nutrition and Sensation Alan R. Hirsch, 2022-08-25 Nutrition and Sensation Second Edition continues to explore how sensations unravel the hidden sensory universe which acts to control our appetite and nutritional desires The sensory influence on food is found everywhere whether it is the color of soda the viscosity of maple syrup or the aroma of chocolate the sensory experience fuels consumption This book continues to discuss the impact of olfaction gustation

retronasal olfaction vision vestibular function hearing and somatosensory and tactile nature on nutrition It also focuses on the use of the sensory system to treat nutritional disorders including obesity with attention to the mechanisms encompassing smell and taste and how this can influence satiety and weight Nutrition and Sensation Second Edition provides a deeper understanding of the fascinating link between the sensory system and nutrition
