Ronchi,2019-04-17 This book explores various e Services related to health learning culture media and the news

and the influences the Web and related technologies have had and continue to have in each of these areas both on service providers and service users. It provides insights into the main technological and human issues regarding healthcare, aging, population, recent challenges in the educational environment, the impact of digital technologies on culture and heritage, cultural diversity, freedom of expression, intellectual property, fake news, and last but not least public opinion manipulation and ethical issues. Its main aim is to bridge the gap between technological solutions, their successful implementation, and the fruitful utilization of the main set of e-Services mostly delivered by private or public companies. Today various parameters actively influence e-Services success or failure: cultural aspects, organisational and privacy issues, bureaucracy and workflows, infrastructure and technology in general, user habits, literacy, capacity, or merely interaction design. This includes having a significant population of citizens who are willing and able to adopt and use online services as well as developing the managerial and technical capability to implement applications that meet citizens' needs. This book helps readers understand the mutual dependencies involved, further a selection of success stories and failures, duly commented on, enables readers to identify the right approach to innovation in areas that offer the opportunity to reach a wide audience with minimal effort. With its balanced humanistic and technological approach, the book mainly targets public authorities, decision makers, stakeholders, solution developers, and graduate students.

After Empires Giuliano Garavini, 2012-10-25 *After Empires* describes how the end of colonial empires and the changes in international politics and economies after decolonization affected the European integration process. Until now studies on European integration have often focussed on the search for peaceful relations among the European nations, particularly between Germany and France, or examined it as an offspring of the Cold War, moving together with the ups and downs of transatlantic relations. But these two factors alone are not enough to explain the rise of the European Community and its more recent transformation into the European Union. Giuliano Garavini focuses instead on the emergence of the Third World as an international actor, starting from its initial economic cooperation with the creation of the United Nations Conference for Trade and Development (UNCTAD) in 1964 up to the end of unity among the countries of the Global South after the second oil shock in 1979-80. Offering a new, less myopic way to conceptualise European history more globally, the study is based on a variety of international archives, government archives in Europe, the US, Algeria, Venezuela, international organizations such as the EC, UNCTAD, and the World Bank, political and social organizations such as the Socialist International, labour archives, and the papers of oil companies, and traces the reactions and the initiatives of the countries of the European Community but also of the European political parties and public opinion to the rise and fall of the Third World on the international stage.
