Euthanasia Killing Or Caring:

Euthanasia and Physician-assisted Suicide Michael Manning (M.D.), 1998 A concise overview of the history and arguments surrounding euthanasia and physician assisted suicide Euthanasia Rita Marker, 1992-03 **Caring Well** David H. Smith, 2000-01-01 Caring Well reinvigorates the contribution of religion to medical ethics by developing new methodologies for approaching problems encountered in one particularly important aspect of the work of health care professionals care for the seriously ill It includes new work by some of the most prominent scholars in the field of medical ethics **Practical Decision Making in Health Care Ethics** Raymond J. Devettere, 2009-12-04 For nearly fifteen years Practical Decision Making in Health Care Ethics has offered scholars and students a highly accessible and teachable alternative to the dominant principle based theories in the field Devettere s approach is not based on an ethics of abstract obligations and duties but following Aristotle on how to live a fulfilled and happy life in short an ethics of personal well being grounded in prudence the virtue of ethical decision making This third edition is revised and updated and includes discussions of several landmark cases including the tragic stories of Terri Schiavo and Jesse Gelsinger the first death caused by genetic research Devettere addresses new topics such as partial birth abortion law embryonic stem cell research infant euthanasia in The Netherlands recent Vatican statements on feeding tubes organ donation after cardiac death new developments in artificial hearts clinical trials developed by pharmaceutical companies to market new drugs ghostwritten scientific articles published in major medical journals and controversial HIV AIDS research in Africa This edition also includes a new chapter on the latest social and political issues in American health care Devettere s engaging text relies on commonsense moral concepts and avoids academic jargon It includes a glossary of legal medical and ethical terms an index of cases and thoroughly updated bibliographic essays at the end of each chapter that offer resources for further reading It is a true classic brilliantly conceived and executed and is now even more valuable to undergraduates and graduate students medical students health care professionals hospital ethics committees and institutional review boards and general readers interested in philosophy medicine and the rapidly changing field of health care ethics *The Ethics of Terminal Care* Erich E.H. Loewy, 2007-05-08 Today we have more control over how we live and how we die than we ever had before This fact has produced many ethical problems While much about life is biologically determined much else is determined by the social circumstances surrounding it Unfortunately little energy is spent dealing with the social and psychological factors within which the medical biological factors are imbedded In this volume the authors examine some of the medical social and psychological conditions which affect the way we die Important topics covered include attitudes toward death suicide assisted suicide and euthanasia hospice and pain management This volume will be of interest to all who work with terminally ill patients Critical Care Ethics David F. Kelly, 2002-06-11 In Critical Care Ethics David F Kelly describes and analyzes some of the major ethical issues facing American hospitals today and proposes practical approaches by which hospitals may

ethically and legally resolve them The author includes both theory and application in a way which insures accessibility to those without a background in moral philosophy or moral theology The book s major emphasis is on the resolution within the American hospital of the practical question of forgoing treatment Its central thesis is that a consensus has arisen in American medical ethics concerning the ethical and legal rightness of forgoing medical treatment in some circumstances The present consensus is based on three pillars The first two of these are ethical principles and distinctions arising from Catholic medical ethics which have been generally accepted in American hospital ethics and American law The third is the development of American law itself Together these three bases have resulted in general agreement that Americans have the right to refuse treatment for themselves and that with some reservations they have the right to forgo treatment for others as well These issues are developed in detail including application to the question of medical nutrition and analysis of the decision In addition there are chapters on pain pain management ethics committees and the problems of resource allocation The final chapter attempts to point out some of the difficulties inherent in allocation arguments and criticizes the way in which they are so often made by many ethicists and religious leaders

People v. Kevorkian; Hobbins v. Attorney General,

447 MICH 436 (1994) ,1994 99759 Setting Health-Care Priorities Torbjörn Tännsjö,2019-06-21 With much of the world's population facing restricted access to adequate medical care how to allocate scarce health care resources is a pressing question for governments hospitals and individuals How do we decide where funding for health care programs should go Tännsjö here approaches the subject from a philosophical perspective balancing theoretical treatments of distributive ethics with real world examples of how health care is administered around the world today Tännsjö begins by laying out several popular ethical theories utilitarianism which recommends maximizing the best overall outcome egalitarianism which recommends smoothing out the differences between people as much as possible and the maximin leximin theory which urges people to give absolute priority to those who are worst off Tännsjö shows how in abstract thought experiments these theories come into conflict with each other and reveal puzzling implications He goes on to argue however that when we consider health care in the real world these theories all agree on a central point in a well ordered welfare state more resources should be directed to the care and cure of people suffering from mental illness and less to the marginal life extension of elderly patients Tännsjö's book thus recommends a shift in spending to increase fairness and overall utility while also recognizing that this kind of dispassionate suggestion with its purely economic foundation is unlikely to take hold in policy Tännsjö's analysis is a case study in how ethical theories can sometimes lead to rational conclusions and recommendations that we are not prepared to accept
