evaluating the implementation and development of educational technology as well as the impact of policies and programs in this field Within this volume several authors have written about the implementation and evaluation of technology across cultures and national boundaries pointing to an area of research that will rapidly expand in this decade The concern for meeting the needs of policymakers is also apparent in several of these chapters but there is tension between providing them with positive results to support their efforts and reexamining the questions they are asking and how these questions are developed We know that evaluation is not the extended arm of public relations and yet it becomes clear that evaluators are often asked to demonstrate a project is successful on the threat that the funding will be cut While this decision making process fits the timetable of the fiscal year it does not acknowledge that evaluation can be formative and strengthen programs This timetable also ignores the investment of time that is needed when implementing innovations like the Internet into teaching and learning Many of the authors included in this volume write from the context of evaluating federally funded programs and they provide valuable insight for future projects which are created and evaluated at the state level As technology initiatives are developed and funded outside of the federal arena more evaluators will be called upon From approaches developed from federally funded projects we can build upon these methods and models for evaluation within regional projects to answer questions related to budgets and accountability As we answer these immediate questions we can move forward to examine the long term impact of technology and the possibility that exercises in conformity will replace the adventure of human enlightenment for our children **Evaluating Educational Programs and Products** Gary D. The laudable rationale is that the feedback provided will enable instructors to improve their teaching and the curriculum thus enhancing the quality of student learning In spite of this there is little evidence that it does improve the quality of teaching and learning Ratings only improve if the instruments and the presentation of results are sufficiently diagnostic to identify potential improvements and there is effective counselling Evaluating Teaching and Learning explains how evaluation can be more effective in enhancing the quality of teaching and learning and introduces broader and more diverse forms of evaluation This guide explains how to develop questionnaires and protocols which are valid reliabile and diagnostic It also contains proven instruments that have undergone appropriate testing procedures together with a substantial item bank The book looks at the specific national frameworks for the evaluation of teaching in use in the USA UK and Australia It caters for diverse methodologies both quantitative and qualitative and offers solutions that allow evaluation at a wide range of levels from classrooms to programmes to departments and entire institutions With detail on all aspects of the main evaluation techniques and instruments the authors show how effective evaluation can make use of a variety of approaches and combine them into an effective project With a companion website which has listings of the questionnaires and item bank this book will be of interest to those concerned with organising and conducting evaluation in a college university faculty or department It will also appeal to those engaged in the scholarship of teaching and learning

Evaluating Teaching Practices in Graduate Programs Jesús Gabalán-Coello, Fredy Eduardo Vásquez-Rizo, Michel Laurier, 2019-12-19 This book proposes a method to evaluate the work of teachers acting in a very specific educational context graduate programs at higher education

institutions There are many publications on the field of measurement and evaluation of teaching practices but these studies are usually conducted at the undergraduate level and ignore the nuances of teaching practices at the graduate level Should professors demonstrate the same skills when they teach in undergraduate programs as they do when they teach in graduate programs Is it appropriate to use the same assessment tools both at the undergraduate and the graduate levels Do the teaching practices evolve the same way at the graduate and undergraduate levels The book intends to answer these questions by introducing a methodological approach to find the relevant variables that are the foundation of professional practices at the graduate level as determined by the scientific community and through the analysis of the stakeholders perceptions The proposed methodological approach combines quantitative and qualitative research techniques to identify and explain within a mixed method framework the most important factors that lead to teaching quality at graduate level Therefore How to Evaluate Teaching Practices in Graduate Practices will be a valuable resource for students university professors and educational administrators interested in quality assurance processes in higher education institutions

Empirical Methods for Evaluating Educational Interventions Gary D. Phye, Daniel H. Robinson, Joel Levin, 2005-04-22 New US government requirements state that federally funded grants and school programs must prove that they are based on scientifically proved improvements in teaching and learning All new grants must show they are based on scientifically sound research to be funded and budgets to schools must likewise show that they are based on scientifically sound research However the movement in education over the past several years has been toward qualitative rather than quantitative measures The new legislation comes at a time when researchers are ill trained to measure results or even to frame questions in an empirical way and when school administrators and teachers are no longer remember or were never trained to prove statistically that their programs are effective Experimental Methods for Evaluating Educational Interventions is a tutorial on what it means to frame a question in an empirical manner how one needs to test that a method works what statistics one uses to measure effectiveness and how to document these findings in a way so as to be compliant with new empirically based requirements The book is simplistic enough to be accessible to those teaching and administrative educational professionals long out of schooling but comprehensive and sophisticated enough to be of use to researchers who know experimental design and statistics but don't know how to use what they know to write acceptable grant proposals or to get governmental funding for their programs Provides an overview to interpreting empirical data in education Reviews data analysis techniques use and interpretation Discusses research on learning instruction and curriculum Explores importance of showing progress as well as cause and effect Identifies obstacles to applying research into practice Examines policy development for states nations and countries **Empirical Methods for Evaluating Educational Interventions** Gary D. Phye, Daniel H. Robinson, Joel Levin, 2005-03-07 Invaluable for all educators and teachers needing to write acceptable grant proposals or to obtain governmental funding for their programs **Developing and Evaluating Educational Programs for Students**
