Evaluating the Impact of Nutrition and Health Programs Robert E. Klein, 2012-12-06 As is noted in the opening chapter of this volume nutrition and public health programs have been important throughout Latin America and the Caribbean for many years This is due to the special concerns of those responsible for setting national policies the program experience and leadership in public health developed by the national governments and the stimulus and cooperation of the Pan American Health Organization PAHO including its twelve associated centers which focus on research training and program development The need for a coordinated hemisphere wide attack on malnutrition and other health problems was expressed clearly in the Ten Year Health Plan for the Americas 1 This plan established specific targets for reducing the prevalence of the major nutritional diseases and other health problems for the decade 1971 1980 It was noted at that time that very few countries had formulated adequate comprehensive national food and nutrition policies and plans nor had they developed strategies for combating the nutritional deficiencies known to affect large numbers of people throughout the Region Following a review of the available data on a country by country basis in 1975 the PAHO Directing Council endorsed recommendations for formulating the necessary national policies and strategies for the intersectorial execution of food nutrition and health programs 2 This report also summarized the available national data related to nutritional status existing programs such as food fortification and the human resources available for services as well as for research and education

Improving the Use of Program Evaluation for Maximum Health Impact, 2012 Evaluation is a systematic method for collecting analyzing and using data to examine the effectiveness and efficiency of programs and as importantly to contribute to continuous program improvement see Appendix A for key definitions CDC has a deep and long standing commitment to the use of data for decision making as well as the responsibility to describe the outcomes achieved with its public health dollars When programs conduct strong practical evaluations on a routine basis the findings can both meet accountability mandates as well as improve program effectiveness In an effort to bring greater consistency to the use of evaluation for these purposes evaluation experts around the Agency developed a set of recommendations to inform evaluation planning and implementation The goal is to increase the use of evaluation data for continuous program improvement Agency wide These are recommendations and not mandates because our programs vary so much in purpose funding and history It is expected that the leadership of Centers Divisions and large programs will seriously and systematically consider which of these guidelines and recommendations are most important to improve evaluation capacity and the quality of program evaluations in their own organizations Why are these guidelines and recommendations

needed Although program evaluation has always been a respected component of public health practice the ability to conduct meaningful program evaluations has been constrained by wide differences in expertise resources of programs and commitment to evaluation Unfortunately as the accountability environment has intensified at all levels of government public health programs often find themselves unable to make a persuasive case for the efficacy and effectiveness of their programs Likewise in an environment of scarce resources we need more and better information about which interventions and approaches of the many options open to us are best suited to the problem Strong program evaluation can help us identify our best investments as well as determine how to establish and sustain them as optimal practice While the emphasis is on CDC practice most of these recommendations when implemented will improve the ways in which partners grantees and community based organizations evaluate and improve their program efforts as well

Evaluating Health Projects Susan Stout, 1997-01-01 This book explores the wave of decentralization that has swept through Latin America and the projected institutional changes within the governments in the region Although it notes the ways in which decentralization implies a critique of past governing patterns the emphasis is on such potential consequences of governmental change as the strengthening of democratic participation in government and the improvement of local public service The book draws upon

institutional experiments carried out at the state level to examine which decentralization strategies work best in Latin America It is organized around three major requirements for the success of decentralization Establishing the national fiscal framework Moving government closer to the people Improving municipal service delivery Tables illustrate the shift of revenues and expenditures from central authorities to intermediate levels of government

Evaluating the Impact of Health Programs Michael E. Borus, William R. Tash, C. Gregory Buntz, 1982-04-09 This basic text presents a step by step impact evaluation methodology that can be used by students and administrators without prior exposure to the field The treatment is nontechnical and sparing in its use of statistical technique and economic terminology but it covers the major components required to perform the cost benefit analyses that underlie reliable policy decisions The book will be as useful to those who are called on to read evaluations as to those who prepare them The focus of the primer is on impact evaluation of publicly supported programs designed to deliver comprehensive or specialized ambulatory health services Impact evaluation in the authors usage is concerned not only with whether specific goals are achieved but also with the unplanned and unanticipated effects and side effects of programs It offers a means for making improvements based on a program s total impact on its client population and the community at large The methodology is applicable to a range of health care operations as diverse in their structure functions and processes as community mental health centers health maintenance organizations professional service review organizations and single purpose medical intervention facilities such as alcohol abuse and treatment centers burn centers and renal dialysis programs Each chapter is followed by case exercises and extensive bibliographic listings for those readers who wish to explore specific topics in greater technical detail Michael E Borus is Director of the Center for Human Resource Research and Professor of Labor and Human Resources and Economics at the Ohio State University C Gregory Buntz is Director of the Public Administration Program at the University of the Pacific and William R Tash is President of the Horizon Institute
