Evaluating Value Added Models For Teacher Accountability:

Evaluating Value-added Models for Teacher Accountability Daniel F. McCaffrey, 2003 Does value added modeling VAM demonstrate the importance of teachers to student outcomes The authors clarify the primary questions raised by VAM for measuring teacher effects review the most important recent applications of VAM and discuss a variety of statistical and measurement issues that might affect the validity of VAM inferences The authors identify numerous possible sources of error and bias in teacher effects and recommend a number of steps for future research into these potential errors Are Value-added Models for High-stakes Teacher Accountability Arbitrary and Capricious? Leila Melanie Melhem, 2012 Value added models are complex statistical formulas that aim to isolate the effect a teacher has on student learning States and districts across the nation are adopting laws and policies that will evaluate teachers in part using the results provided by value added models In many states and districts these evaluations will be used to inform high stakes decisions about teacher salary and retention However value added models are imperfect tools for assessing teacher effectiveness and many scholars have argued that they are not appropriate for use in high stakes decisions This Article provides a brief history of the use of value added models in public education and summarizes the major criticisms of using value added models In this context the Article analyzes and evaluates the extent to which substantive due process claims brought by teachers adversely affected by the results of value added models will be successful The Article concludes that while the system as a whole is rationally related to the objective of improving the overall effectiveness of the teaching workforce in certain cases individual teachers will be able to successfully claim that the results of their value added model led to a termination that was arbitrary and capricious Finally the paper offers some recommendations to states and school districts on how to implement an evaluation system using value added models to avoid substantive due process violations **Value-added Assessment in Practice**

Daniel F. McCaffrey, Laura S. Hamilton, 2007 Value added assessment VAA systems use statistical techniques to analyze test score data VAA data is intended to help educators make more informed decisions about curriculum and instruction The authors examined the rollout of Pennsylvania's VAA program and found that in its pilot phase the program had little effect on student achievement and received limited use by most principals and teachers at schools participating in the program
