**Evaluation of Advanced Semiconductor Materials by Electron Microscopy** David Cherns,1990-01-01

*Evaluation of Advanced Semiconductor Materials by Electron Microscopy* David Cherns,2012-12-06 The last few years have seen rapid improvements in semiconductor growth techniques which have produced an expanding range of high quality heterostructures for new semiconductor devices. As the dimensions of such structures approach the nanometer level it becomes increasingly important to characterise materials properties such as composition uniformity, strain, interface sharpness and roughness and the nature of defects as well as their influence on electrical and optical properties. Much of this information is being obtained by electron microscopy and this is also an area of rapid progress. There have been advances for thin film studies across a wide range of techniques including for example convergent beam electron diffraction, X ray and electron energy loss microanalysis and high spatial resolution cathodoluminescence as well as by conventional and high resolution methods. Important developments have also occurred in the study of surfaces and film growth phenomena by both microscopy and diffraction techniques. With these developments in mind an application was made to the NATO Science Committee in late summer 1987 to fund an Advanced Research Workshop to review the electron microscopy of advanced semiconductors. This was subsequently accepted for the 1988 programme and became the NATO Advanced Research Workshop on the Evaluation of Advanced Semiconductor Materials by Electron Microscopy. The Workshop took place in the pleasant and intimate surroundings of Wills Hall, Bristol, UK during the week 11-17 September 1988 and was attended by fifty five participants from fourteen countries.

**Electron Microscopy and Analysis**, 1993      **Analytical Techniques for the Characterization of Compound Semiconductors** G. Bastard, H. Oppolzer, 1991-07-26 This volume is a collection of 96 papers presented at the above Conference. The scope of the work includes optical and electrical methods as well as techniques for structural and compositional characterization. The contributed papers report on topics such as X ray diffraction, TEM depth profiling, photoluminescence, Raman scattering and various electrical methods. Of particular interest are combinations of different techniques providing complementary information. The compound semiconductors reviewed belong mainly to the III-V and III-VI families. The papers in this volume will provide a useful reference on the implications of new technologies in the characterization of compound semiconductors.
