Role of Inflammation and Immune Control in Digestive Disease and Therapeutic Approaches Shuai Wang, Liu Changhui, Zhenhua Li, Wenyi Gu, 2025-05-29 Digestive system diseases including gastroenteritis irritable bowel syndrome Crohn's disease ulcerative colitis hepatitis and pancreatitis present as a common disease that affects millions of people worldwide The pathogenesis of these diseases remains as a complex context involving multiple factors such as genetics environment lifestyle microbiome and immune system Recently multi omics analysis strategies raised much concern about the proximal and distal cross talks between immunocytes and tissue specific cell types Methods for the diagnosis treatment and prognosis of digestive diseases related to immunity such as stem cell therapies small molecule chemical drugs biologics and phytochemicals have been successively developed and applied However the specific functions and related mechanisms of immune cells such as T cells B cells macrophages and other immune cells in digestive diseases still need further exploration Thus investigating the potential and promising immunomodulatory targets would help us uncover the initiation and development of molecular events of immune disorders in digestive system diseases which in turn would promote their prevention and treatment The goal of this Research Topic is to provide a forum to advance research on the comprehensive understanding of immune regulatory mechanisms and the role of abnormal mechanisms in the occurrence and development of digestive diseases as well as to explore innovative immune oriented drugs or treatment interventions in the attempt to achieve a beneficial impact on the diagnosis prevention therapy and prognosis of digestive diseases Bullet points are as below 1 The specific functions and clinical significance of immune cells e.g. T cells B cells macrophages and other immune cells etc in digestive diseases 2 The mechanism of immune cells participate in inflammatory reactions and tissue damage in digestive diseases 3 The mechanism of regulators affecting the inflammatory response of the digestive system e.g. nuclear

receptor membrane receptor pathway etc 4 The role of small molecules in digestive diseases e g cytokines chemical factors anti inflammatory agents immune regulatory molecules etc 5 Development of novel anti inflammatory and immunomodulatory drugs for digestive diseases Bibliometric studies are outside of the scope of this section and may be rejected or redirected to other journals sections as appropriate Bioinformatics or Computational Analysis of public genome or transcriptome databases need to be accompanied by robust and relevant validation to be submitted to this section Manuscripts describing the pharmacological action of drugs used in traditional medicine in models of disease such as inflammatory disease are not in scope unless they have a strong focus on the immune system

Pavlov,Niccolo Terrando,2018-07-24 The nervous system plays an important role in the regulation of immunity and inflammation On the other hand unbalanced immune responses in inflammatory and autoimmune conditions may have a deleterious impact on neuronal integrity and brain function Recent studies have characterized neural pathways communicating peripheral inflammatory signals to the CNS and brain and spinal cord derived circuitries controlling various innate and adaptive immune responses and inflammation A prototypical neural reflex circuit that regulates immunity and inflammation is the vagus nerve based inflammatory reflex Ongoing research has revealed cellular and molecular mechanisms underlying these neural circuits and indicated new therapeutic approaches in inflammatory and autoimmune disorders Pharmacological and bioelectronic modulation of neural circuitry has been successfully explored in preclinical settings of sepsis arthritis inflammatory bowel disease obesity driven disorders diabetes

and other diseases These studies paved the way to successful clinical trials with bioelectronic neuronal modulation in rheumatoid arthritis and inflammatory bowel disease Dysregulated release of cytokines and other inflammatory molecules may have a severe impact on brain function Brain inflammation neuroinflammation imbalances in brain neuronal integrity and neurotransmitter systems and cognitive impairment are characteristic features of post operative conditions sepsis liver diseases diabetes and other disorders characterized by immune and metabolic dysregulation Derangements in cytokine release also play a pivotal role in depression Characteristic brain reactive antibodies in autoimmune conditions including systemic lupus erythematosus and neuromyelitis optica significantly contribute to brain pathology and cognitive impairment These studies and the simultaneous characterization of neuro protective cytokines identified new therapeutic approaches for treating neurological complications in inflammatory and autoimmune disorders This Frontiers Research Topic is a forum for publishing research findings and methodological and conceptual advances at the intersection of immunology and neuroscience We hope that presenting new insight into bi directional neuro immune communication in inflammation and autoimmunity will foster further collaborations and facilitate the development of new efficient therapeutic strategies **New**

Approach Methods in Immunology Jeffrey John Bajramovic,Susan Gibbs,Emanuela Corsini,Thomas Hartung,2024-09-27

Currently the assessment of functional immunological relevance is mainly done in animal models Motivation to work on non animal methods or new approach methods NAM stems from economical and ethical considerations and is supported by public pressure Importantly the translational gap between results obtained in animal studies and clinical trials in humans the valley of death combined with the reproducibility crisis in science also provide strong scientific arguments to work on novel robust human based methodology The field of immunology confronts NAM scientists with specific challenges Firstly immunological responses require several cell types in different locations for proper development and take considerable time to develop Secondly immunological responses in outbred humans are characterized by genetic and functional variability Still the development and application of NAM are increasing rapidly and the field is moving at such a fast pace that a special issue is timely Our goal is to provide an overview of the current state of the art regarding new approach methods or non animal methods NAM in immunology These should be inspired by the desire to mimic in vivo biology and describe e g challenges in mimicking immunological structures like lymph nodes bone marrow local immune structures immunological responses systemic and local innate and adaptive B cells and T cells and or immunological processes like maturation trafficking extravasation immunotoxicity affinity maturation Clinical Immunology E-Book Robert R. Intestinal Homeostasis and Disease: A Complex Partnership between Immune Cells, Non-Immune Cells and the Microbiome Marcela A. Hermoso, Thomas Thornton MacDonald, Marjorie K. De La Fuente, 2020-01-20

Gut Microbiota and Immunity in Health and Disease: dysbiosis and eubiosis's effects on the human body Payam Behzadi, Veronica I. Dodero, Servaas Antonie Morré, Sandip K. Wagh, 2025-01-02 The human body gets its balance and homeostasis from the harbored useful microorganisms Indeed the human fetus experiences the first microbial exposure within his/her mother's body During the post partum period an infant gets formed to be inhabited by different types of useful microorganisms e.g. archaea bacteria fungi and viruses collectively known as the microbiota In particular the evolution of the gut microbiota throughout life appears to play a pivotal role in both health and disease On the one hand metabolic regulation homeostasis and a strong

immune system depend on gut microbiota balance or eubiosis On the other hand gut microbiota dysregulation or dysbiosis is observed in many diseases like diabetes cancers autoimmune diseases inflammatory bowel disorders atherosclerotic cardiovascular diseases kidney diseases neurological disorders e g Alzheimer s and Parkinson s diseases mental health disorders etc Interestingly environmental factors and genetics are involved Therefore the interconnection between host microbiota environments is a fascinating and emerging area of research to understand health and disease
