Evaluation And Experiment Some Critical Issues In Assessing Social Programs:

Evaluation and Experiment Carl A. Bennett, Arthur A. Lumsdaine, 2013-09-24 *Evaluation and Experiment Some Critical Issues in Assessing Social Programs* is a collection of papers presented at the 1973 symposium held at The Battelle Seattle Research Center. This book contains eight chapters that consider some selected aspects of the problems in evaluating the outcomes of socially important programs such as those dealing with education, health, and economic policy. The first chapter provides an overview of the issues around the Social Program Evaluation. The next chapters deal with the successes and failures brought by social innovations, the quasi-experimental evaluation in compensatory education to estimate the true effects of such education programs, and the usefulness and validity of econometric and related nonexperimental approaches for assessing the effects of social programs. These topics are followed by surveys of a number of additional program evaluation studies, particularly in the field of family planning or fertility control, mostly carried out as experiments or quasi-experiments in Asian and Latin American countries. Other chapters describe the decision processes that involve explicit assessment of the worth or merit of outcomes and employ multivalued utility analysis and outline the ways in which evaluative data are useful in providing feedback to program or institutional operations and decisions. The final chapter discusses resolutions for some of the disagreements expressed by others concerning the role of field experiments, constraints in their utilization, and other factors that enter into a comprehensive conception of program evaluation.

Impact Analysis for Program Evaluation Lawrence B. Mohr, 1995-09-07 Clarifies the concepts used in impact analysis and provides in-depth methodologies for research. Educator's Update: I learned much from reading the first edition of this book years ago, and this edition retains many of the positive features of that version, especially the regression framework and the lucid discussion of how regression discontinuity and randomized experimentation fit into that framework. I think that if this were the only book a person ever learned from, that person would be well taught in the art of impact assessment, not be misled into going seriously wrong, and be more capable of doing impact assessment than most other applied social scientists. William R. Shadish Jr., Memphis State University. Successful in the first edition for its integration of multiple regression with evaluation design and for its systematic ways to select the proper goals for single and multiple outcome evaluations, this new edition is more helpful than ever. *Impact Analysis for Program Evaluation, Second Edition* has been revised to cover new issues and to further clarify the concepts used in impact analysis. It offers expanded coverage and explanation of quasi-experiments, a new section on the theory of impact analysis, updated information on the use of qualitative research for impact analysis, and expanded coverage of significance testing for program evaluation. It also includes an explanation of why the comparative change design, i.e., Campbell and Stanley's nonequivalent control group design, is better than an ex post facto design from the standpoint of causal inference. A clarification of the effects of volunteering or self-selection is offered, along with a new simplified appendix on regression artifacts. Evaluators and applied researchers who want to enhance their understanding of research design and

of threats to valid inference will find this book an effective guide to improving the utility of their evaluation results

The Experimenting Society William N. Dunn, 2024-11-01 An experimenting society is one in which policy relevant knowledge is created. It is then critically assessed and communicated in real life or natural settings with the aim of discovering new forms of public action to improve the problem solving capacities of society. This latest volume of the distinguished Policy Studies Review Annual series probes, evaluates and augments the work of Donald T. Campbell on an experimental societies. A basic assumption of this volume is that Campbell's perspective supplies a useful way to address increasingly complex and seemingly unmanageable problems facing the United States and other postindustrial societies. This volume is also the fourteenth festschrift to be issued by Transaction. The focus is on theoretical as well as practical options for creating an experimenting society. The rationale for this focus is the belief increasingly shared in the social science and policy making communities alike that researchers are essentially ignorant about how to solve many of the most pressing larger problems of this epoch. This frank recognition of ignorance is a prerequisite of genuine scientific and professional curiosity without which knowledge gains are next to impossible to achieve and a precondition of an experimenting society. Contributors to this original volume include Steve Fuller, Duncan MacRae Jr., Anthony S. Bryk, Robert A. Beauregard, Rita Mae Kelly, Peter Gregware, Burkart Holzner, B. Guy Peters, C. West Churchman and Ian I. Mitroff. Their multidisciplinary competencies are at once philosophical, methodological and substantive. They address such questions as: What new or bold policies are available in domains such as education, science and urban development? In what ways can theoretical knowledge and practical action be fused so as to illuminate or alleviate policy problems? What should be done? Included are excerpts from Campbell's foundational paper *The Experimenting Society* as well as a recent article entitled *Methods for the Experimenting Society* which circulated in unpublished form for many years. An unusual feature of the book is Campbell's responses to those who have addressed his work with candor and intelligence. It will be of interest to policy studies scholars, sociologists and social scientists.

Evaluation Research Alan Clarke, 1999-09-22 Providing students and practitioners with a comprehensive introduction to evaluation research, this book shows how social research methods and methodologies can be applied in a variety of evaluation contexts. The author illustrates the contribution both quantitative and qualitative methods can make to evaluation, stresses the important part played by theory in the evaluation enterprise, introduces some of the conceptual, methodological and practical problems encountered when undertaking this type of applied research, especially in the areas of criminal justice, health care and education.

Research Design Leonard Bickman, 2000-01-24 Leading social research methodologists and evaluators address the issues of research design in this second of two volumes inspired by the work on Donald Campbell and sponsored by the American Evaluation Association. The book considers issues such as quasi-experimentation, the proposed conduct of social inquiry, ways to take account of threats to validity, plausible rival hypotheses in measurement and design, subject selection and loss in randomized experiments, the use of evaluation to assess the validity

of computer simulations method variance and time series experiments Applied researchers who want to improve their research designs will find this book a compelling and thought provoking read *Educational Research* R. Joel A. C. Baum, Bill McKelvey, 1999-05-14 In my judgment this book in honor of Donald T Campbell will be very influential and highly cited. It will become a must read for Ph D students and scholars in strategy and organization theory. Arie Lewin, Duke University. The topics in this volume are cutting edge and the contributors are first rate. The book is well anchored. Donald T Campbell has had a profound influence on the field. Moreover, the book is well conceptualized. Socio cultural evolution, co evolution, methods, modeling and epistemology are key issues in organization science right now. Michael Tushman, Harvard University. If he were an assistant professor today, what would social science giant Donald T Campbell be pursuing in the field of organization science? Joel A C Baum and Bill McKelvey explore this question in *Variations in Organization Science*. This volume reveals and celebrates Campbell's many contributions to organization science by presenting new variations that stem directly from his work. Rather than analyze Campbell's theories, the authors present ideas that Campbell might have pursued if he were currently a doctoral student. This volume is unique in its focus on coevolution and multilevel coevolutionary analysis as well as in its range of subject matter from empirical studies to leading edge epistemological discourses. Each of the book's four main sections focuses on a major aspect of Campbell's legacy: blind variation, selection and retention, multilevel coevolution, process level analysis and modeling and epistemology and methodology. In addition, the volume includes a Foreword by Barbara Frankel Campbell and an unusual Appendix: Donald Campbell's complete curriculum vitae. *Variations in Organization Science* should be on the top of the reading list for any organization scientist interested in organizational evolution, change and competitiveness. This volume will also appeal to any scholar interested in the human and social capital base of firms and how organizational knowledge and learning work to provide the basis of competitive advantage.

Modelling and Evaluating Treatment Effects in Econometrics

Dann Millimet, Jeffrey Smith, Edward Vytlačil, 2008-02-21 The estimation of the effects of treatments, endogenous variables representing everything from individual participation in a training program to national participation in a World Bank loan program, has occupied much of the theoretical and applied econometric research literatures. This volume presents a collection of papers on this topic.
