European Technology Roger Williams (BA.), 1973 High-Tech Europe Wayne Sandholtz, 2024-06-04 Governments have recognized for decades the dynamic role played by microelectronics computers and telecommunications in the modern economy Although Europe's deficiencies in these crucial sectors had long been acknowledged it was not until the 1980s that European nations began collaborating to develop and promote high tech industries Their collaboration gives rise to many questions Why for example did the joint efforts come at such a late date rather than in the 1960s or 70s And how is it possible to work together in economically sensitive areas These questions point to fundamental issues in the areas of international cooperation international institutions and technology policy Before the institution of the collaborative programs ESPRIT European Strategic Programme for Research and Development in Information Technology RACE R D in Advanced Communications technologies in Europe and EUREKA European Research Coordination Agency in the 1980s each European country sought its own technological renaissance through protection of national firms behind walls of technical standards procurement preferences and research subsidies This thoroughly researched work examines the breakdown of these walls It will appeal to political scientists economists and scholars of technology and Western Europe interested in the political contours of the high tech landscape This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1992

The Politics of the Communications Revolution in Western Europe Kenneth Dyson, Peter Humphreys, 2023-11-06 First published in 1986 *The Politics of the Communications Revolution in Western Europe* deals with the political implications of the communications revolution specifically with impacts on political debate and agenda the policy process the role of the state and European integration The communications revolution in Western Europe combined radical changes in the fields of computing broadcasting and telecommunications converging in the new media and is intimately linked to the wider

information technology revolution The economic and social implications of the communications revolution are wide ranging and include the electronic office tele banking and tele shopping decentralisation of economic activities major transformations in the labour markets and the strategic role of the electronics industry This book will be of interest to students of European studies history and media studies **British Business in the Formative Years of European Integration, 1945-1973**

Neil Rollings, 2007-12-10 This book questions conventional accounts of the history of European integration and British business Integration accounts normally focus on the nation state while Neil Rollings focuses on business and its role in the development of European integration which business historians have previously overlooked Business provided a key link between economic integration political integration and the process of Europeanization British businessmen perceived early on that European integration meant much more than the removal of tariffs and access to new markets Indeed British entry into the European community would alter the whole landscape of the European working environment Consideration of European integration is revealed as a complex relative and dynamic issue covering many issues such as competition policy taxation and company law Based on extensive archival research this book uses the case of business to emphasize the need to blend national histories with the history of European integration **European Union Research Policy** Veera

Mitzner, 2020-06-01 This book describes the emergence of research policy as a key competence of the European Union EU It shows how the European Community EC the predecessor of the EU which initially had very limited legal competence in the field progressively developed a solid policy framework presenting science and research as indispensable tools for European economic competitiveness and growth In the late 20th century Western Europe hungry for growth concerned about the American technological lead and keen to compete in the increasingly open international markets the argument for a joint European effort in science and technology seemed plausible However the EC was building its new functions in an already crowded field of European research collaboration and in a shifting political context marked by austerity national rivalries new societal and environmental challenges and emerging ambivalence about science This book conveys the contested history of one of the EU's most successful policies It is a story of struggle and frustration but also of a great institutional and intellectual continuity The ideational edifice for the EC EU research policy that was put in place during the 1960s and 1970s years proved remarkably robust Its durability enabled the rapid takeoff of the European Commission's initiatives in the more favorable political atmosphere of the early 1980s and the subsequent expansion of the EU research funding instruments and programs that permanently transformed the European research landscape **Airbus Industrie** S. McGuire, 1997-08-13 This

book examines an event that never happened a trade war between the US and the EC in respect of the civil aircraft builder Airbus Industrie By understanding this trade dispute the author casts light on broader issues of international cooperation by focusing on the bilateral trade negotiations that took place between 1979 and 1992 He considers the role played by aerospace firms the GATT and the transatlantic alliance in shaping this cooperative outcome *The Economics and Politics*

of European Integration Ivan T. Berend, 2020-12-29 The Economics and Politics of European Integration offers a comprehensive history of European integration from the conceptualization of a United States of Europe to the present day. The special role of the United States in this process of integration and the expansion and evolution of the European Union is critically analyzed. The book also thoroughly discusses the current view of the EU and the complex crises emerging from the COVID 19 pandemic. While the book focuses primarily on Europe, the role of other countries is also examined. The rise of hostile enemies from Turkey, Russia, the US and China is explored, and the history and outcome of Brexit also receives unique focus. Maps are used throughout to clearly depict the enlargement process. This illuminating text will be valuable reading for students and researchers across international economics, economic history, political economy and European studies.

Britain and the Political Economy of European Military Aerospace Collaboration, 1960-2023 Keith Hayward, 2023-07-13 The UK has been collaborating with international, primarily European partners in the design, development and production of advanced combat aircraft for over sixty years. Driven by a combination of rising costs and limited domestic markets, collaboration has also been a highly political act involving a combination of national industrial and technological interests. Over the years, the form of collaboration has evolved in some cases leading to the creation of transnational companies. The UK has been a pioneer of globalisation in the defence industry, establishing a strong presence inside the US defence market and has become a significant partner with American companies in key military aerospace programmes. This has contributed to divisions within the European military aerospace industry which are likely to continue into the next generation of combat aircraft.

Japan and the Politics of Techno-globalism Gregory P. Corning, 2016-07-08 Techno globalism is the term used by policymakers to describe the process of opening government and Research and Development programs to foreign participation. This book focuses on Japan's approach to techno globalism, in particular the policies of the Ministry of International Trade and Industry (MITI). It also explores the politics underlying the approach to this issue in the triad of leading R D centers: Japan, the United States and the European Union. The author examines various theoretical approaches to the political economy of globalization and he describes systems of innovation in Japan, the United States and the European Union, emphasizing research linkages among firms, national labs and universities.
