**Evaluation and Installation of Surgical Laser Systems** David B. Apfelberg, 2012-12-06 The advent in the 1960s of the unique and exciting new form of energy called laser brought to medicine a marvelous tool that could accomplish new treatments of previously untreatable disorders as well as improved treatment of mundane problems This brilliant form of light energy is many times more powerful than the energy of the sun yet can be focused microscopically to spot sizes as small as 30 microns Lasers can be directed into seemingly inaccessible areas by mirrors or fiberoptic cables or can be directly applied into sensitive areas such as the retina without damage to intervening structures There has been a rapid proliferation in the use of lasers in all surgical specialties Starting with bold ideas and experiments of thought leaders in each specialty the application of lasers has evolved into commonplace usage Beginning with the era when laser presentations and publications were an oddity now nearly all specialty areas have whole sections of meetings or journals devoted exclusively to laser usage Laser specialty societies within a specialty have developed and residency training programs routinely instruct trainees in laser techniques Basic science and clinical experimentation has supported laser knowledge Laser usage has also become international Newer wavelengths and accessories have added to the armamentarium of laser usage Despite the rapid growth in laser interest no single source exists to instruct the many new laser users in proper safe and effective use of this new modality *Evaluation and Installation of Surgical Laser Systems* David B Apfelberg, 1986-12-16 Quality

Absten,Stephen N. Joffe,2013-11-11 In every area of human endeavor technology has opened the door for new advancements to occur Much of the progress in medicine over the last few years is due in large part to new technological tools made available to clinicians and researchers Laser is an expanding technological discipline in medicine that will ultimately contribute to a broad and rapid expansion of both diagnostic and treatment procedures Laser is to light what music is to noise Those physicians who wish to be most successful in the application of this technology to the benefit of their patient will learn of the subtle interactions of light with tissue No technology is good or bad in itself It is only in the choices we make in when and how to apply that technology that it gains its moral value The use of

lasers in medicine has some very definite advantages in the surgical and medical treatment of a variety of disorders. At the same time we must all be careful to not perpetrate the myth of lasers in medicine. Vastly overstated claims of the value of laser surgery have been held out to the general public resulting in health care being sought on the basis of laser availability.

*Lasers in Dermatology and Medicine* Keyvan Nouri, 2011-09-06 Laser technology is constantly evolving and progressing. The use of laser therapy is vastly expanding and for this reason a medical book of this magnitude is necessary. *Lasers and Light Therapy* includes an up to date comprehensive look at lasers and light therapy not only in the field of Cutaneous Laser Surgery but in other medical specialties as well. National Library of Medicine Current Catalog National Library of Medicine (U.S.), Medical Lasers and Their Safe Use David H. Sliney, Stephen L. Trokel, 2012-12-06 This text was designed for the physicians, nurses, technical personnel and staff members of medical facilities using lasers for surgical, therapeutic and diagnostic purposes. The objective is to provide an understanding of the potential health and safety hazards associated with the use of medical laser systems and the precautions needed to use them safely. To do this it is necessary to have an awareness of applicable standards and regulations that apply to laser use. This book is not intended as a substitute for the American National Standards Institute ANSI Z 136.3 Safe Use of Lasers in Health Care Facilities but to facilitate its implementation as well as the implementation of the many other related regulations and guidelines that are pertinent. These other regulations include the Medical Device Amendments to the Food and Drug Act, the Federal Laser Product Performance Standards issued under the Radiation Control for Health and Safety Act and applicable regulations of the Occupational Safety and Health Administration OSHA. The text is organized to provide first an overview of laser hazards, laser surgical applications and laser biological effects. General safety control measures and safety standards are then presented. Because laser technology is rapidly evolving these general guidelines will allow safe use of new laser systems as they become available. Finally specific safety guidelines and precautions are provided for specialized laser applications in the different health care specialties.

**Percutaneous Lumbar Discectomy** H. Michael Mayer, Mario Brock, 2012-12-06 Percutaneous lumbar discectomy is a new surgical method for treating lumbar disc diseases. The goal of the procedure is decompression of the spinal nerve root by percutaneous removal of the nucleus pulposus under local anesthesia. Probably 20 % of all patients requiring lumbar disc surgery can be successfully treated by this method. During the past two years percutaneous discectomy has spread rapidly and it is now performed in most clinical departments engaged in spinal surgery. The first International Symposium on Percutaneous Lumbar Discectomy held in Berlin in August 1988 covered all current procedures known as percutaneous discectomy and the entire range of percutaneous techniques both clinical and experimental. Its publication is important because of the recency of this new surgical procedure, the outstanding experience of the speakers including the Japanese, American and European pioneers of the technique and last but not least the gaps in the knowledge of physicians concerning this topic. This procedure opens up new perspectives in the surgical treatment of degenerative diseases of the
