Cognition Jürgen Bohnemeyer, Eric Pederson, 2010-12-23 Event Representation in Language and Cognition examines new research into how the mind deals with the experience of events Empirical research into the cognitive processes involved when people view events and talk about them is still a young field The chapters by leading experts draw on data from the description of events in spoken and signed languages first and second language acquisition co speech gesture and eye movements during language production and from non linguistic categorization and other tasks The book highlights newly found evidence for how perception thought and language constrain each other in the experience of events It will be of particular interest to linguists psychologists and philosophers as well as to anyone interested in the representation and processing of events **Event Cognition** Viki McCabe, Gerald J. Event Power Chris Rojek, 2013-02-21 Rojek's argument is a psychological one although his message is political global events build on people's needs to feel empowered and jointly engaged in the pursuit of a higher purpose they allow a break from daily routines provide an illusion of intimacy and social membership and create a sense of self validation and personal gratification In short participation in such events makes us feel good At the same time the real effect of global events seems to be the maintenance of global inequality and social injustice as well as huge profits for the organizations involved in planning commercializing and securing these happenings In sketching out this palliative function of global events from the perspective of people's needs on the one hand and unveiling their puppet masters backstage on the other Rojek's book presents a compelling account of the role of organized events in modern society Organization Studies Events dominate our screens our lives and increasingly global geopolitics Analysis of events and their management has remained rooted in leisure and management studies until now This breakthrough book provides an introduction to event management while also situating events in questions of power and social control Rojek powerfully argues that events are essential elements in corporate state partnerships of invisible government that have revived the romance of charity as to form illusory communities while cloaking power imbalances and social inequalities Events are moving politics from the old idea of the personal is political to the new more seductive notion that representation is resistance Wielding rich case studies from the World Cup and the Olympics to Live Aid Burning Man and Mardi Gras Rojek presents a dazzlingly original account of communication power social ordering and control It is essential reading in media communication studies and across the social sciences

Narrative Persuasion. A Cognitive Perspective on Language Evolution Francesco Ferretti, 2022-08-23 This book explores the evolutionary and cognitive foundations of human communication focusing on narrative as its distinctive dimension Within a framework of continuity with both the communication of our hominin predecessors and that of non human animals the book is about a twofold proposal It includes the idea that human and animal communication has an intrinsically persuasive nature along with the hypothesis that humans developed narrative forms of communication in order to enhance their persuasive abilities In this view narrative persuasion becomes the feature that distinguishes human communication from animal communication The study of the transition from animal communication to language addresses both the selective pressures that led communication for persuasive purposes to take a narrative form and the cognitive architectures and expressive systems that enabled our ancestors to cope with the selective pressures of persuasive narrative based communication Language evolution is interdisciplinary even from the specific perspective of evolutionary pragmatics chosen here Therefore this book is intended for researchers working in fields such as cognitive sciences philosophy evolutionary biology cognitive psychology and primatology It also represents a valuable resource for advanced students in cognitive sciences linguistics and philosophy

Ten Lectures on the Representation of Events in Language, Perception, Memory, and Action Control Jeffrey M. Zacks, 2020-02-10 The representation of events is a central topic for cognitive science In this series of lectures Jeffrey M Zacks situates event representations and their role in language within a theory of perception and memory Event representations have a distinctive structure and format that result from computational and neural mechanisms operating during perception and language comprehension A crucial aspect of the mechanisms is that event representations are updated to optimize their predictive utility This updating has consequences for action control and for long term memory Event cognition changes across the adult lifespan and can be impaired by conditions including Alzheimer's disease These mechanisms have broad impact on everyday activity and have shaped the development of media such as cinema and narrative fiction

CBT: The Cognitive Behavioural Tsunami Farhad Dalal, 2018-09-25 Is CBT all it claims to be The Cognitive Behavioural Tsunami Managerialism Politics and the Corruptions of Science provides a powerful critique of CBT's understanding of human suffering as well as the apparent scientific basis underlying it The book argues that CBT psychology has fetishized measurement to such a degree that it has come to believe that only the countable counts It suggests that the so called

science of CBT is not just bad science but corrupt science The rise of CBT has been fostered by neoliberalism and the phenomenon of New Public Management The book not only critiques the science psychology and philosophy of CBT but also challenges the managerialist mentality and its hyper rational understanding of efficiency both of which are commonplace in organizational life today The book suggests that these are perverse forms of thought which have been institutionalised by NICE and IAPT and used by them to generate narratives of CBT s prowess It claims that CBT is an exercise in symptom reduction which vastly exaggerates the degree to which symptoms are reduced the durability of the improvement as well as the numbers of people it helps Arguing that CBT is neither the cure nor the scientific treatment it claims to be the book also serves as a broader cultural critique of the times we live in a critique which draws on philosophy and politics on economics and psychology on sociology and history and ultimately on the idea of science itself It will be of immense interest to psychotherapists policymakers and those concerned about the excesses of managerialism Perspectives on Pantomime Przemysław Żywicznyński, Johan Blomberg, Monika Boruta-Żywicznyńska, 2024-02-15 Pantomime is a unique form of communication which we improvise on the fly to transmit information when unable to use language for example during intercultural contacts or when the use of language is blocked or constrained as in the case of some medical conditions or the game of charades Pantomimic communication has been investigated from a number of perspectives including neuropsychological developmental and gesture research Recently pantomime has come under the attention of evolutionary linguistics as a strong candidate for a precursor of verbal communication The volume Perspectives on pantomime evolution development interaction brings together authors who are at the forefront of these studies which challenge the notion that pantomime is merely a fallback mode of expression This multidisciplinary journey traverses language evolution cognitive science cognitive semiotics sign language linguistics psychology and gesture studies to unveil the profound role that pantomime plays in human communication
