Event History Analysis In Demography:

Event History Analysis in Demography Daniel Courceau,Éva Lelièvre,Eva Lelièvre,1992 This book constitutes the first review of the techniques of event history analysis in demography During the 1970s the amount of reliable data made available as a result of surveys increased enormously At the same time statistical and computational techniques developed to allow the new data to be handled This treatment of the subject gives a detailed treatment of the techniques of event history analysis It provides not only a thorough description of models but also a theoretical presentation of this new research path without losing sight of the underlying application to population dynamics It will serve as a handbook of methodology for demographers and other social scientists interested in the study of the timing of events in individual lives **Demography: Analysis and Synthesis, Four Volume Set** Graziella Caselli,Jacques Vallin,Guillaume Wunsch,2006-01-03 This four volume collection of over 140 original chapters covers virtually everything of interest to demographers sociologists and others Over 100 authors present population subjects in ways that provoke thinking and lead to the creation of new perspectives not just facts and equations to be memorized The articles follow a theory methods applications approach and so offer a kind of one stop shop that is well suited for students and professors who need non technical summaries such as political scientists public affairs specialists and others Unlike shorter handbooks Demography Analysis and Synthesis offers a long overdue thorough treatment of the field Choosing the analytical method that fits the data and the situation requires insights that the authors and editors of Demography Analysis and Synthesis have explored and developed This extended examination of demographic tools not only seeks to explain the analytical tools themselves but also the relationships between general population dynamics and their natural economic social political and cultural environments Limiting themselves to human populations only the authors and editors cover subjects that range from the core building blocks of population change fertility mortality and migration to the consequences of demographic changes in the biological and health fields population theories and doctrines observation systems and the teaching of demography The international perspectives brought to these subjects is vital for those who want an unbiased rounded overview of these complex multifaceted subjects Topics to be covered Population Dynamics and the Relationship Between Population Growth and Structure The Determinants of Fertility The Determinants of Mortality The Determinants of Migration Historical and Geographical Determinants of Population The Effects of Population on Health Economics Culture and the Environment Population Policies Data Collection Methods and Teaching about Population Studies All chapters share a common format Each chapter features several cross references to other chapters Tables charts and other non text features are widespread Each chapter contains at least 30 bibliographic citations **Event History Analysis in Life Course Research** Karl Ulrich Mayer,Nancy Brandon Tuma,1990 A compendium of studies drawn from an international conference this volume includes the newest and most substantive work on event history analysis Researchers at four institutions convened shared models of analysis and collected their findings for the first time The studies

included represent work done in the following organizations The Max Planck Institute in West Germany The U S Social Science Research Council s Committee on Comparative Stratification The Special Research Unit of the Deutsche Forschungsgemeinschaft and MASO and informal German working group on mathematical sociology This book is one of twelve in the University of Wisconsin Press s Life Course Studies series arranged by the series editors David L Featherman and David I Kertzer Introducing Survival and Event History Analysis Melinda Mills,2011-01-19 This book is an accessible practical and comprehensive guide for researchers from multiple disciplines including biomedical epidemiology engineering and the social sciences Written for accessibility this book will appeal to students and researchers who want to understand the basics of survival and event history analysis and apply these methods without getting entangled in mathematical and theoretical technicalities Inside readers are offered a blueprint for their entire research project from data preparation to model selection and diagnostics Engaging easy to read functional and packed with enlightening examples hands on exercises conversations with key scholars and resources for both students and instructors this text allows researchers to quickly master advanced statistical techniques It is written from the perspective of the user making it suitable as both a self learning tool and graduate level textbook Also included are up to date innovations in the field including advancements in the assessment of model fit unobserved heterogeneity recurrent events and multilevel event history models Practical instructions are also included for using the statistical programs of R STATA and SPSS enabling readers to replicate the examples described in the text **Demographic Applications of Event History Analysis** James Trussell,Richard Hankinson,Judith Tilton,2023 This study illustrates the use of the new techniques at the frontier of the subject of event history analysis concentrating on the timing of events in individual lives The major methodological approaches and their differences are the subject of this volume *Demography - Volume II* Zeng Yi,2010-11-30 Zeng Yi is a Professor at the Center for the Study of Aging and Human Development and Geriatric Division Dept of Medicine of Medical School and Institute of Population Research and Dept of Sociology Duke University He is also a Professor at the China Center for Economic Research National School of Development at Peking University in China and Distinguished Research Scholar of the Max Planck Institute for Demographic Research MPIDR in Germany He received his doctoral degree from Brussels Free University in May 1986 and conducted post doctoral study at Princeton University in 1986 87 Up to Feb 2008 he has had 81 professional articles written in English published in academic journals or as book chapters in the United States and Europe among them 51 articles were published in anonymous peer reviewed academic journals He has had 85 professional articles written in Chinese and published in China among them 55 articles were published in national top Chinese academic journals He has published sixteen books including five research books as first author such as Family Dynamics in China published by the University of Wisconsin Press one textbook on demographic methods as the sole author two volumes of demographic software and user s manuals as the first author on family status life table analysis six edited books four as the chief editor and two as the second

editor such as the 2005 and 2008 books published by Springer for which he served as the chief editor Six of Zeng Yi's published books were written in English one was written in both Chinese and English and the remainders were written in Chinese Zeng Yi has been awarded more than ten national and international academic prizes such as the Dorothy Thomas Prize of the Population Association of America the Harold D Lasswell Prize in Policy Science awarded by the international journal Policy Sciences and Kluwer Academic Publishers the second class prize for advancement of science and technology awarded by the State Sciences and Technology Commission of China the first class prize for advancement of science and technology awarded by the State Education Commission and the highest academic honor of Peking University Prize for Outstanding Contributions in Sciences According to the search report up to March 1 2008 the internationally most important literature sources SSCI Social Science Citation Index and SCI Science Citation Index published in the U S indicate that Zeng Yi's articles and books have been cited in 755 journal articles by authors other than Zeng Yi Among them 440 citations refer to the work of Zeng Yi as the first author 315 citations refer to the work of Zeng Yi as a co author Zeng Yi is one of the authors of High Impact Papers worldwide in the period of 1981-1998 as announced by International Scientific Institute ISI in September 2000

International Handbook of Migration and Population Distribution Michael J. White, 2015-12-11 This Handbook offers a comprehensive collection of essays that cover essential features of geographical mobility from internal migration to international migration to urbanization to the adaptation of migrants in their destinations Part I of the collection introduces the range of theoretical perspectives offered by several social science disciplines while also examining the crucial relationship between internal and international migration Part II takes up methods ranging from how migration data are best collected to contemporary techniques for analyzing such data Part III of the handbook contains summaries of present trends across all world regions Part IV rounds out the volume with several contributions assessing pressing issues in contemporary policy areas The volume's editor Michael J White has spent a career studying the pattern and process of internal and international migration urbanization and population distribution in a wide variety of settings from developing societies to advanced economies In this Handbook he brings together contributors from all parts of the world gathering in this one volume both geographical and substantive expertise of the first rank The Handbook will be a key reference source for established scholars as well as an invaluable high level introduction to the most relevant topics in the field for emerging scholars

Event History Analysis Hans-Peter Blossfeld, Alfred Hamerle, Karl Ulrich Mayer, 2014-02-24 Serving as both a student textbook and a professional reference handbook this volume explores the statistical methods of examining time intervals between successive state transitions or events Examples include survival rates of patients in medical studies unemployment periods in economic studies or the period of time it takes a criminal to break the law after his release in a criminological study The authors illustrate the entire research path required in the application of event history analysis from the initial problems of recording event oriented data to the specific questions of data organization to the concrete application

of available program packages and the interpretation of the obtained results Event History Analysis makes didactically accessible the inclusion of covariates in semi parametric and parametric regression models based upon concrete examples presents the unabbreviated close relationship underlying statistical theory details parameter free methods of analysis of event history data and the possibilities of their graphical presentation discusses specific problems of multi state and multi episode models introduces time varying covariates and the question of unobserved population heterogeneity demonstrates through examples how to implement hypotheses tests and how to choose the right model

Survival and Event History Analysis Odd Aalen, Ornulf Borgan, Hakon Gjessing, 2008-09-16 The aim of this book is to bridge the gap between standard textbook models and a range of models where the dynamic structure of the data manifests itself fully The common denominator of such models is stochastic processes The authors show how counting processes martingales and stochastic integrals fit very nicely with censored data Beginning with standard analyses such as Kaplan Meier plots and Cox regression the presentation progresses to the additive hazard model and recurrent event data Stochastic processes are also used as natural models for individual frailty they allow sensible interpretations of a number of surprising artifacts seen in population data The stochastic process framework is naturally connected to causality The authors show how dynamic path analyses can incorporate many modern causality ideas in a framework that takes the time aspect seriously To make the material accessible to the reader a large number of practical examples mainly from medicine are developed in detail Stochastic processes are introduced in an intuitive and non technical manner The book is aimed at investigators who use event history methods and want a better understanding of the statistical concepts It is suitable as a textbook for graduate courses in statistics and biostatistics

Causal Analysis in Population Studies Henriette Engelhardt, Hans-Peter Kohler, Alexia

Fürnkranz-Prskawetz, 2009-05-05 The central aim of many studies in population research and demography is to explain cause effect relationships among variables or events For decades population scientists have concentrated their efforts on estimating the causes of effects by applying standard cross sectional and dynamic regression techniques with regression coefficients routinely being understood as estimates of causal effects The standard approach to infer the effects of causes in natural sciences and in psychology is to conduct randomized experiments In population studies experimental designs are generally infeasible In population studies most research is based on non experimental designs observational or survey designs and rarely on quasi experiments or natural experiments Using non experimental designs to infer causal relationships i e relationships that can ultimately inform policies or interventions is a complex undertaking Specifically treatment effects can be inferred from non experimental data with a counterfactual approach In this counterfactual perspective causal effects are defined as the difference between the potential outcome irrespective of whether or not an individual had received a certain treatment or experienced a certain cause The counterfactual approach to estimate effects of causes from quasi experimental data or from observational studies was first proposed by Rubin in 1974 and further developed by James

Heckman and others This book presents both theoretical contributions and empirical applications of the counterfactual approach to causal inference **Handbook on Demographic Change and the Lifecourse** Jane Falkingham, Maria Evandrou, Athina Vlachantoni, 2020-06-26 This innovative Handbook offers a deeper understanding of the causes and consequences of demographic change across the lifecourse Chapters highlight major theoretical and methodological advances and present research that sheds light on family dynamics health and mobility over the lifecourse illustrating the implications of lifecourse research for policy and reform *Event History Analysis* Kazuo Yamaguchi, 1991-07-18 In a manner similar to many other titles within the Applied Social Research Methods Series this 182 page book thoroughly covers many of the specific methodological hurdles encountered in implementing event history analysis EHA The Applied Social Research Methods Series is the result of careful subject selection Consistent with the practical orientation of the book each of the application sections provides useful insights into data structure problems and programming notes Kazuo Yamaguchi's insightful review of problems in structuring EHA models is useful for those contemplating life course research We strongly recommend its inclusion in the libraries of marketing researchers and its inclusion on suggested reading lists of graduate research method seminars Journal of Marketing Research This book which is part of Sage Publications Applied Social Research Methods Series is a practical guide for those interested in using event history analysis The book's strength is that it is well written and easy to understand Even those with limited statistical backgrounds can follow the discussion and the systematic progression from the simpler to the more complex models although the author provides ample references for those wanting a more rigorous discussion Upon finishing the book I found myself wondering about specific accounting questions that might be addressed using event history analysis There are many and in fact most issues can be recast in an events framework In sum I recommend this book to anyone wanting to use event history analysis whether to apply to new research questions or to provide a fresh look at old questions The Accounting Review A significant introduction to the event history literature that provides the background to implement this difficult methodology successfully and that can be supplemented with other more advanced texts It will undoubtedly become a prized text among students and a valuable reference for the research community Contemporary Sociology As a research tool event history analysis has recently become a key technique for researchers professionals and students in a wide range of disciplines However despite this increasing interest few resources exist which clearly examine this technique Now Event History Analysis provides a systematic introduction to models methods and applications of event history analysis Kazuo Yamaguchi emphasizes hands on information including the use and misuse of samples models and covariates in applications the structural arrangement of input data the specification of various models in such computer programs as SAS LOGIST and SPSS LOGLINEAR and the interpretation of parameters estimated from models This timely book also offers such significant topics as missing data hazard rate Cox's partial likelihood model survivor function and discrete time logit models for both one way and two way

transitions Event History Analysis is essential for researchers professionals and students of public health sociology labor economics political science and organization studies Provided by published **Event History Analysis With Stata** Hans-Peter Blossfeld,Gotz Rohwer,Thorsten Schneider,2019-04-12 Nowadays event history analysis can draw on a well established set of statistical tools for the description and causal analysis of event history data The second edition of Event History Analysis with Stata provides an updated introduction to event history modeling along with many instructive Stata examples Using the latest Stata software each of these practical examples develops a research question refers to useful substantive background information gives a short exposition of the underlying statistical concepts describes the organization of the input data and the application of the statistical Stata procedures and assists the reader in performing a substantive interpretation of the obtained results Emphasising the strengths and limitations of event history model techniques in each field of application this book demonstrates that event history models provide a useful approach with which to uncover causal relationships or to map out a system of causal relations It demonstrates how long term processes can be studied and how changing context information on the micro meso and macro levels can be integrated easily into a dynamic analysis of longitudinal data Event History Analysis with Stata is an invaluable resource for both novice students and researchers who need an introductory textbook and experienced researchers from sociology economics political science pedagogy psychology or demography who are looking for a practical handbook for their research **Fundamentals of Demographic Analysis: Concepts, Measures and Methods** Gordon A. Carmichael,2015-11-04 This book offers an ideal introduction to the analysis of demographic data Inside readers of all quantitative skill levels will find the information they need to develop a solid understanding of the methods used to study human populations and how they change over time due to such factors as birth death and migration The comprehensive systematic coverage defines basic concepts and introduces data sources champions the use of Lexis diagrams as a device for visualizing demographic measures highlights the importance of making comparisons whether over time or between populations at a point in time that control for differences in population composition describes approaches to analyzing mortality fertility and migration and details approaches to the important field of population projection Throughout the author makes the material accessible for readers through careful exposition the use of examples and other helpful features This book s thorough coverage of basic concepts and principles lays a firm foundation for anyone contemplating undertaking demographic research whether in a university setting or in a professional employment that takes on a demographic dimension requiring in house training [Forecasting International Migration in Europe: A Bayesian View](#) Jakub Bijak,2010-10-23 International migration is becoming an increasingly important element of contemporary demographic dynamics and yet due to its high volatility it remains the most unpredictable element of population change In Europe population forecasting is especially difficult because good quality data on migration are lacking There is a clear need for reliable methods of predicting migration since population forecasts are indispensable for rational

decision making in many areas including labour markets social security or spatial planning and organisation In addressing these issues this book adopts a Bayesian statistical perspective which allows for a formal incorporation of expert judgement while describing uncertainty in a coherent and explicit manner No prior knowledge of Bayesian statistics is assumed The outcomes are discussed from the point of view of forecast users decision makers with the aim to show the relevance and usefulness of the presented methods in practical applications

Household Demography and Household Modeling

Evert Imhoff,1995-10-31 This comprehensive work examines the latest developments in the growing field of household demography focusing on household analysis and modeling Chapters examine the full range of stages in household projection including data collection data analysis and selection of a projection model Complete with numerous illustrations this book is practical rather than conceptual with its exploration of existing models and concrete applications Topics include historical trends theories of household formation and dissolution event history analysis multistate models housing market models labor market models and much more

Causal

Analysis with Event History Data Using Stata Hans-Peter Blossfeld,Götz Rohwer,Gwendolin J. Blossfeld,2025-07-28 This

third edition of Causal Analysis with Event History Data Using Stata provides an updated introduction to event history modeling along with many instructive Stata examples Using the latest Stata software each of these practical examples develops a research question points to useful contextual background information gives a brief account of the underlying statistical concepts describes the organization of input data and the application of Stata statistical procedures and assists the reader in interpreting the content of the results obtained Emphasizing the strengths and limitations of continuous time event history analysis in different fields of social science applications this book demonstrates that event history models provide a useful approach to uncover causal relations or to map a system of causal relationships In particular this book demonstrates how long term processes can be studied how different forms of duration dependencies can be estimated using nonparametric parametric and semiparametric models and how parallel and interdependent dynamic systems can be analyzed from a causal analytical point of view using the method of episode splitting The book also shows how changing contextual information at the micro meso and macro levels can be easily integrated into a dynamic analysis of longitudinal data Finally the book addresses the problem of unobserved heterogeneity of time constant and time dependent omitted variables and makes suggestions for dealing with these sometimes difficult methodological problems Causal Analysis with Event History Data Using Stata is an invaluable resource for both novice and experienced researchers from a variety of fields e g sociology economics political science education psychology demography epidemiology management research and organizational studies as well as medicine and clinical applications who need an introductory textbook on continuous time event history analysis and who are looking for a practical handbook for their longitudinal research **Analytical Family**

Demography Robert Schoen, 2018-09-12 In this book new mathematical and statistical techniques that permit more sophisticated analysis are refined and applied to questions of current concern in order to understand the forces that are driving the recent dramatic changes in family patterns The areas examined include the impact of the evolving Second Demographic Transition where complex patterns of gender dynamics and social change are re orienting family life New analyses of marriage cohabitation union dynamics and union dissolution provide a fresh look at the changing family life cycle emerging patterns of partner choice and the impact of union dissolution on the life course The demography of kinship is explored and the importance of parity progression to the generation of the kinship web is highlighted The methodology of population projections by family status is examined and new results presented that demonstrate how recognizing family status advances long term policy objectives especially with regard to children and the elderly This book applies up to date methods to examine the demography of the family and will be of value to sociologists demographers and all those who are interested in the family
