Breckle, 1989-08-17 By the end of the last century the only region in all of Europe where the natural vegetation remained untouched over large expanses was Eastern Europe Information on the vegetation of this region however remained mostly unavailable to western scientists although the ecological approach to botanical research originated in Eastern Europe Heinrich Walter was born in Russia studied Natural Sciences with emphasis on botany in Odessa and is familiar with all relevant Russian literature on ecology This volume thus offers scientists worldwide a unique and comprehensive survey of all relevant research including the mostly unknown literature published in Russian *Ecological Systems of the Geobiosphere* Heinrich Walter, Siegmund-W. of measurements of the areas covered by the individual regions excluding rivers lakes glaciers and permanent snow total phytomass and total annual primary production for the various regions were obtained see table The sum of these figures is the phytomass and annual production of the land surface of the earth In addition the table gives corresponding data for the waters of the earth The values involved are potential i e they are based on natural vegetation uninfluenced by man

**Ecological Systems of the Geobiosphere: Temperate and polar zonobiomes of northern Eurasia** Heinrich Walter,1985      *Vegetation and Climate* Siegmar-W.

Breckle,M. Daud Rafiqpoor,2022-11-07 Vegetation soil and climate are the most important components of ecological systems The book represents a compact synthesis of our current knowledge about the ecology of the Earth and is thus the basis for understanding the major interrelationships in a global perspective In the first part with a rich endowment of illustrations and photographic material the well introduced book deals with the essential processes and operations on the Earth s surface that lead to the formation of the vegetation cover with its distinctive zonation In the second part the individual vegetation zones as large scale ecosystems i e zonobiomes of the biosphere are consistently described comparatively according to certain criteria In a short and compact form the main characteristics and structures as well as examples of ecosystem processes are discussed The large scale ecosystems are at the same time the basis and reference system for all anthropogenic changes that have drastically altered the vegetation in the last millennia but especially in the 20th century This book is a translation of the original German 1st edition *Vegetation und Klima* by Siegmar W Breckle and M Daud Rafiqpoor published by Springer Verlag GmbH Germany part of Springer Nature in 2019 The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors

**Coviability of Social and Ecological Systems: Reconnecting Mankind to the Biosphere in an Era of Global Change** Olivier Barrière,Mohamed Behnassi,Gilbert David,Vincent Douzal,Mireille Fargette,Thérèse Libourel,Maud Loireau,Laurence

Pascal, Catherine Prost, Voyner Ravena-Cañete, Frédérique Seyler, Serge Morand, 2019-03-12 This book considers the principle of sustainable development which is currently facing a growing environmental crisis A new mode of thinking and positioning the ecological imperative is the major input of this volume The prism of co viability is not the economics of political agencies that carry the ideology of the dominant conventional economic schools but rather an opening of innovation perspectives through science This volume through its four parts more than 40 chapters and a hundred authors gives birth to a paradigm which crystallizes within a concept that will support in overcoming the ecological emergency deadlock **Ecological systems of the geobiosphere** Heinrich Walter, Siegmar-Walter Breckle, 1985 Tropical Ecological Systems F.B. Golley, E. Medina, 2012-12-06 In 1971 the International Society of Tropical Ecology and the International Association for Ecology held a meeting on Tropical Ecology with an emphasis on organic production in New Delhi India At this meeting a Working Group on Tropical Ecology was organized consisting of K C Misra India F Malaisse Zaire E Medina Venezuela and F Golley U S A The object of this Working Group was to stimulate interaction between tropical ecologists through future scientific meetings and other exchanges and communications A second meeting of ISTE and INTECOL was held in Caracas Venezuela in 1973 under the direction of Medina and Golley and sponsored by the Department of Ecology Institute Venezolano Investigaciones Cientificas IVIC The basic structure of the meeting was provided by series of invited papers which considered topics of special interest from both an applied and theoretical view These included physiological ecology Pannier populations Rabinovich tropical savannas Lamotte rivers Sioli estuaries Rodriguez and island ecosystems Mueller Dombois Contributed papers considered details of these and other ecological topics including the application of ecology to human problems The present volume includes the invited papers listed above and a sampling of contributed papers which together illustrate the trends of research in tropical ecology The papers show that tropical ecology is a vigorous subject of research While the papers in this volume do not provide reviews of all the topics of study in tropical ecology they do present authoritative statements on progress in the major subject in the field
