Ecology Of Mangrove And Related Ecosystems:

The Ecology of Mangrove and Related Ecosystems Victor Jaccarini, Els Martens, 2013-03-09 The mangrove seagrass and coral reef ecosystems are of paramount ecological importance but have already undergone great degradation which is advancing at an alarming rate. If present trends continue the natural resource basis of the economy and ecology of tropical coastal regions will soon be ruined. This was the unanimous conclusion of the 110 scientists from 23 countries who gathered in Mombasa Kenya for a Symposium on the ecology of these ecosystems. Mangrove forest systems yield large amounts of fish, crabs, prawns and oysters. They are also valuable sources of fuelwood, timber, tannin and other natural products. Their non-marketable value is of equal importance: stabilization of the coastline, an indispensable nursery ground for numerous marine species with commercial value, a natural filter maintaining the clarity of nearshore water, a home for resident and migratory birds and other wildlife. Many of the true mangrove flora and fauna are now endangered by the clearing of the mangroves. It has been shown that in many countries between 25 and 100% of the mangrove forest has been destroyed already in the last twenty years. The international scientific assembly concluded that much can be done to stop the degradation of these damaged ecosystems and to rehabilitate them. But new techniques must be found to use them on a sustainable basis for long term economic return and for the well being of coastal human settlements and a healthy environment.

Mangroves: Ecology, Biodiversity and Management Rajesh P. Rastogi, Mahendra Phulwaria, Dharmendra K. Gupta, 2021-10-01 Mangroves are one of the most productive and biologically important blue carbon ecosystems across the coastal intertidal zone of earth. In the current scenario of serious environmental changes like global warming, climate change, extreme natural disasters, mangrove forests play a vital role in mitigating greenhouse gas emissions and maintaining ecosystem balance. Mangroves are unique ecosystems with rich biological diversity of different taxonomic groups exhibiting great ecological and commercial importance. The book consolidates existing and emerging information on ecology of mangroves with a special reference to their biodiversity and management. It emphasizes on the role of mangroves in providing various ecological services. The book is a comprehensive compilation covering all aspects of mangrove ecology. It is useful for students and researchers in ecology, plants sciences and environmental sciences.

Mangrove Ecosystem: Structure and Function V.P. Singh, K. Odaki, 2004-08-01 The book presents an account of mangrove forest ecosystem, its structure and function. Mangroves are littoral plant formation found in tropical and sub-tropical countries and occurs on the margins of oceans and estuaries. In this book all the aspects of mangrove forest have been discussed. The biodiversity, floristic composition and taxonomy have been enumerated very nicely.

The loss of mangrove forest and its conservation and management aspects have been given in details A case study of mangrove forests of Andaman islands and South Japan has been documented in details This is very good book for those who are working on mangrove ecology taxonomy physiology and coastal ecology The Energetics of Mangrove Forests Daniel Alongi, 2009-01-18 Despite their importance in sustaining livelihoods for many people living along some of the world's most populous coastlines tropical mangrove forests are disappearing at an alarming rate Occupying a crucial place between land and sea these tidal ecosystems provide a valuable ecological and economic resource as important nursery grounds and breeding sites for many organisms and as a renewable source of wood and traditional foods and medicines Perhaps most importantly they are accumulation sites for sediment contaminants carbon and nutrients and offer significant protection against coastal erosion This book presents a functional overview of mangrove forest ecosystems how they live and grow at the edge of tropical seas how they play a critical role along most of the world's tropical coasts and how their future might look in a world affected by climate change Such a process oriented approach is necessary in order to further understand the role of these dynamic forests in ecosystem function and as a first step towards developing adequate strategies for their conservation and sustainable use and management The book will provide a valuable resource for researchers in mangrove ecology as well as reference for resource managers

Blue Carbon Reservoir of the Blue Planet Abhijit Mitra, Sufia Zaman, 2014-11-20 The ever increasing emission of carbon dioxide due to rapid industrialization urbanization unplanned tourism and alteration of land use pattern is causing unprecedented changes to marine biodiversity Irrespective of political philosophy nation caste sex and religion mankind is under the appalling shadow of climate change Today nature based approaches for the mitigation of climate change are increasingly accepted as part of the low cost solution Thrust has been given by several scientific communities to assess the magnitude and viability of carbon sequestering potential of plants Coastal producer communities like mangroves salt marsh grass seagrass beds and seaweeds absorb atmospheric carbon dioxide during the process of photosynthesis This carbon known as the blue carbon is thus associated with the marine and estuarine ecosystems However a number of gaps in our scientific knowledge on blue carbon domain still exist Molluscs coral reefs phytoplankton which are amongst the important storehouses of carbon have not been addressed Very few scientific studies on the carbon stored in these valuable natural vaults have been performed and no data bank is available on their carbon sequestering capacity on global basis The methodologies for assessing blue carbon stock also need further standardization so that credit from blue carbon reservoir is accepted by the International bodies in the form of a concrete policy It is a matter of great appreciation that Conservation International CI the International Union for Conservation of Natural Resources IUCN and the Intergovernmental Oceanic Commission IOC of UNESCO is collaborating with governments research institutions non governmental and international organizations and communities around the world to develop management approaches financial incentives and policy mechanisms for ensuring conservation and restoration of blue

carbon ecosystems and implement projects around the world that demonstrate the feasibility of blue carbon accounting management and incentive agreements The present book has critically presented the data bank for each community of blue carbon not merely in the form of text description but also through case studies that are the outcomes of research projects and pilot programmes

Diversity and Function in Mangrove Ecosystems Richard Standiford, 2012-12-06 Mangroves are salt adapted plants that are found along many of the world's tropical and sub tropical coastlines Regrettably these plants are being lost due to over exploitation pollution conversion to agriculture and aquaculture and other causes This is having important consequences for local human populations that traditionally rely on this resource and is upsetting the fine balance needed to maintain this highly productive ecosystem This text brings together some papers from two recent international symposia on the mangrove ecosystem It provides an outline of future directions in mangrove research considered to be urgent by prominent mangrove scientists Contributions include aspects of population differentiation in mangrove species that have been very little studied so far ecological function and restoration and management of the mangrove ecosystem This book is intended for scientists actively working in the areas of mangrove ecology and management

Blue Carbon Dynamics of the Indian Ocean Abhra Chanda, Sourav Das, Tuhin Ghosh, 2022-03-21 This book gives an overview of various aspects of blue carbon dynamics from each country bordering the Indian Ocean Given the importance of the topic of blue carbon it can be assumed that in near future more and more researchers from the Indian Ocean countries will pursue environmental research in this domain This book is a ready reference to all those who are interested to have a holistic understanding about the ground scenario of blue carbon in the Indian Ocean There are many research institutes situated in the periphery of the Indian Ocean that are devoted to nurturing the new avenues of marine carbon research Researchers and scholars interested in this domain will find this book provides a good overview wherein all the necessary information on the status and functioning of these blue carbon ecosystems are detailed in a concise way The book is also helpful to postgraduate students of marine science or those who have a specialization in marine biogeochemistry or chemical oceanography to develop a basic understanding about the very concept of blue carbon from the perspective of the Indian Ocean

The First Global Integrated Marine Assessment United Nations, 2017-04-17 The World Ocean Assessment or to give its full title The First Global Integrated Marine Assessment is the outcome of the first cycle of the United Nations Regular Process for Global Reporting and Assessment of the State of the Marine Environment including Socioeconomic Aspects The Assessment provides vital scientifically grounded bases for the consideration of ocean issues including climate change by governments intergovernmental agencies non governmental agencies and all other stakeholders and policymakers involved in ocean affairs Together with future assessments and related initiatives it will support the implementation of the recently adopted 2030 Agenda for Sustainable Development particularly its ocean related goals Moreover it will also form an important reference

Mangrove Ecosystems: A Global Biogeographic Perspective Victor H. Rivera-Monroy, Shing Yip Lee, Erik Kristensen, Robert R. Twilley, 2017-11-03 This book presents a comprehensive overview and analysis of mangrove ecological processes structure and function at the local biogeographic and global scales and how these properties interact to provide key ecosystem services to society The analysis is based on an international collaborative effort that focuses on regions and countries holding the largest mangrove resources and encompasses the major biogeographic and socio economic settings of mangrove distribution Given the economic and ecological importance of mangrove wetlands at the global scale the chapters aim to integrate ecological and socio economic perspectives on mangrove function and management using a system level hierarchical analysis framework The book explores the nexus between mangrove ecology and the capacity for ecosystem services with an emphasis on thresholds multiple stressors and local conditions that determine this capacity The interdisciplinary approach and illustrative study cases included in the book will provide valuable resources in data information and knowledge about the current status of one of the most productive coastal ecosystem in the world

Mangrove Ecology, Silviculture and Conservation P. Saenger, 2002 An account of mangrove plants from around the world together with silvicultural and restoration techniques and the management requirements of these communities to ensure their sustainability and conservation **Valuation of Coastland Resources** Indira Hirway, Subhrangsu Goswami, 2007 National income statistics which form the basis for measuring and monitoring the performance of an economy do not include environmental resources adequately with the result that they fail to provide the required inputs for the formulation of sound economic policies particularly in the context of sustainable development Coastal resources are important in a country like India which is surrounded by sea from three sides and mangroves the salt tolerant forest ecosystem that is one of the richest ecosystems in the world provides a wide range of ecological and economic products and services including carbon sequestration and protection to life and property under severe cyclones and tsunamis However mangroves are neglected as their value is not incorporated in the national income data The present study which is a methodological study compiles economic value of mangroves in India and shows that this rich ecosystem contributes

significantly to the economy and it needs to be strengthened in order to promote sustainable development of coastal regions and to protect coastal population from cyclones and tsunamis Book jacket Agroecology, Ecosystems, and Sustainability Nouredine Benkeblia, 2014-11-20 We hear a lot about how agriculture affects climate change and other environmental issues but we hear little about how these issues affect agriculture When we look at both sides of the issues we can develop better solutions for sustainable agriculture without adversely affecting the environment Agroecology Ecosystems and Sustainability explores a modern vision of ecology and agricultural systems so that crop production can be sustainably developed without further environmental degradation With contributions from experts from more than 20 countries the book describes how to make the transition to modern agroecology to help the environment It examines the global availability of natural resources and how agroecology could allow the world population to reach the goal of global sustainable ecological agricultural and food production systems The book discusses important principles that regulate agroecological systems including crop production soil management and environment preservation Making the link between theory and practices the book includes examples of agroecology such as an interdisciplinary framework for the management of integrated production and conservation landscapes and the use of mechanized rain fed farming and its ecological impact on drylands An examination of how ecology and agriculture can be allied to ensure food production and security without threatening our environment the text shows you how natural resources can be used in a manner to create a symbiosis to preserve ecological systems and develop agriculture Ecosystem Services, Biodiversity and Water Quality in Transitional Ecosystems Michele Mistri, Alice Newton, Angel Pérez-Ruzafa, Sofia Reizopoulou, 2023-04-03 The Mangrove Ecosystem of Deep Bay and the Mai Po Marshes, Hong Kong Shing-Yip Lee, 1999-01-01 This volume comprises original research papers reporting findings collected by participants of the International Workshop on the Mangrove Ecosystem of Deep Bay and the Mai Po Marshes jointly organized by the University of Hong Kong and World Wide Fund for Nature Hong Kong and held at the Mai Po Marshes in September 1993 *Carbon stocks and fluxes associated with land-use and land-cover change in mangrove ecosystems: A systematic review protocol* Sigit D Sasmito, Pierre Taillardat, Jessica Clendenning, Daniel A Friess, Daniel Murdiyarso, Lindsay B Hutley, 2016-09-20 Coastal mangrove forests are known as one of the most productive ecosystems and efficient carbon C sinks on the planet Mangroves store a substantial amount of organic C in below ground sediment which is known as blue carbon C As anthropogenic factors have caused greenhouse gas GHG emissions and sea levels to increase mangrove blue C has become a part of global climate change negotiations due to its potential for storing C and mitigating GHG emissions However these coastal forests are also currently under threat from major land use and land cover changes LULCC for aquaculture and agriculture resulting in large amounts of deforested and degraded mangrove areas globally Little is known about the range of impacts different LULCC have upon mangrove C dynamics e g C storage emission and sequestration This systematic review protocol outlines the methodology to identify and quantify the impacts of LULCC upon
