**Sustainable Production** Glen Toner, 2011-11-01 The issues associated with sustainable production are among the most important facing the world in the early 21st century While most of the scholarship in this area has been produced in the United States and Europe not much has been written from a Canadian perspective Sustainable Production establishes a Canadian presence in the sustainable production debate by analyzing the opportunities and constraints facing both the public and private sectors as Canada strives to move public policy and industrial practice forward Sustainable production focuses on the systems by which industrial economies produce goods and services and the ways in which investment and production decisions are influenced by public policy One goal of sustainable production is to dematerialize production minimizing energy and material extraction and throughput per unit of economic output In its broader sense sustainable production should simultaneously improve environmental quality and social well being Sustainable production envisions an industrial system that would maximize resource efficiency minimize environmental impacts and replenish natural capital while providing safe and satisfying employment opportunities Sustainable Production will be of interest to scholars and students in business public policy and engineering to policy makers and to practitioners in firms and industry associations

**Unfolding Stakeholder Thinking** Jörg Andriof, Sandra Waddock, Bryan Husted, Sandra Sutherland Rahman, 2017-09-08 This book the first of a two volume series argues that today stakeholder thinking has evolved into the study of interactive mutually engaged and responsive relationships that establish the very context of doing modern business and create the groundwork for transparency and accountability This book makes it clear that in today's societies successful companies are those that recognize that they have responsibilities to a range of stakeholders that go beyond mere compliance with the law or meeting the fiduciary responsibility inherent in maximizing returns to shareholders If in the past

the focus was on enhancing shareholder value now it is on engaging stakeholders for long term value creation The process of engagement creates a dynamic context of interaction mutual respect dialogue and change not a one sided management of stakeholders Indeed the authors believe the very term stakeholder management to be outdated and corporate centric Companies can manage their relationships with stakeholders but frequently cannot actually manage the stakeholders themselves because as the activist and collaborative initiatives described in this volume suggest company stakeholder relationships are not one way streets and different institutions bring different agendas goals and priorities to the engagement There are clear implications to the way in which stakeholder thinking is unfolding today If in the past corporate social responsibility was simply seen as profitability plus compliance plus philanthropy now responsible corporate citizenship or corporate responsibility means companies being more aware of and understanding the societies in which they operate Corporate responsibility means recognising that day to day operating practices affect stakeholders and that it is in those impacts where responsibility lies not merely in efforts to do good Companies are now faced with a wide array of challenges that mean that senior executives and managers need to be able to deal with issues including greater accountability human rights abuses sustainability strategies corporate governance codes workplace ethics stakeholder consultation and management Stakeholder thinking needs to capture these new realities The global reach of multinational corporations has served to highlight the need for the re integration of business into society relationships into stakeholder relations and ethics into managerial practice The rise in power of global activism involving NGOs and global business involving multinational corporations makes it even more critical today for companies to consider the power and interests of corporate stakeholders when developing strategic plans The interactivity and mutuality of relationships described in this book make it clear that firms and stakeholders share the power and responsibility to influence both the profit potential of the firm and how the benefits of the firm s success impact on society This important volume brings together leading academic thought on stakeholder thinking for the first time Unfolding Stakeholder Thinking will be indispensable to corporate managers NGOs and academics seeking greater understanding of the dynamics of stakeholder thinking in a world of rapidly changing responsibilities A companion volume Unfolding Stakeholder Thinking 2 focusing on practical issues such as relationship management communication reporting and performance is also available
