**Chemical Ecology of Insect Parasitoids** Eric Wajnberg, Stefano Colazza, 2013-03-15 Insect parasitoids are a

fascinating group of animals in many respects Perhaps the most fascinating point is that these insects in the course of the evolutionary time have developed an impressive way to use chemical compounds to dialogue with the different protagonists of their environment i e conspecifics their hosts and the plants on which their hosts are living Unravelling the evolutionary meaning of such chemical communication networks can give new insights into the ecology of these insects and especially on how to improve their use for the control of noxious pests in biological control programmes Chemical Ecology of Insect Parasitoids is a timely publication with organised chapters to present the most important knowledge and discoveries that have taken place over the last decade and their potential use in pest control strategy Specific relevant case studies are presented to enhance the reader s experience Suited to graduate students and professional researchers and practitioners in pest management entomology evolutionary biology behavioural ecology and chemical ecology this book is essential for anyone needing information on this important group of insects
