Edgar Krahn Centenary Volume:

Edgar Krahn 1894-1961 Ülo Lumiste, Jaak Peetre, 1994 *Edgar Krahn, a Centenary Volume* J. Peetre, 1994-08 Edgar Krahn was one of the two authors of the celebrated Faber-Krahn inequality connected with the Rayleigh conjecture and who was one of the first to consider isoperimetric problems in the multidimensional case This volume commemorates his 100th birthday and surveys the major implications of his work in this century **Analytic and Geometric Inequalities and Applications** Themistocles RASSIAS, Hari M. Srivastava, 2012-12-06 Analytic and Geometric Inequalities and Applications is devoted to recent advances in a variety of inequalities of Mathematical Analysis and Geometry Subjects dealt with in this volume include Fractional order inequalities of Hardy type differential and integral inequalities with initial time difference multi dimensional integral inequalities Opial type inequalities Grüss inequality Furuta inequality Laguerre Samuelson inequality with extensions and applications in statistics and matrix theory distortion inequalities for analytic and univalent functions associated with certain fractional calculus and other linear operators problem of infimum in the positive cone α -quasi convex functions defined by convolution with incomplete beta functions Chebyshev polynomials with integer coefficients extremal problems for polynomials Bernstein's inequality and Gauss-Lucas theorem numerical radii of some companion matrices and bounds for the zeros of polynomials degree of convergence for a class of linear operators open problems on eigenvalues of the Laplacian fourth order obstacle boundary value problems bounds on entropy measures for mixed populations as well as controlling the velocity of Brownian motion by its terminal value A wealth of applications of the above is also included We wish to express our appreciation to the distinguished mathematicians who contributed to this volume Finally it is our pleasure to acknowledge the fine cooperation and assistance provided by the staff of Kluwer Academic Publishers June 1999 Themistocles M Rassias Hari M Encyclopaedia of Mathematics, Supplement III Michiel Hazewinkel, 2007-11-23 This is the third supplementary volume to Kluwer's highly acclaimed twelve volume Encyclopaedia of Mathematics This additional volume contains nearly 500 new entries written by experts and covers developments and topics not included in the previous volumes These entries are arranged alphabetically throughout and a detailed index is included This supplementary volume enhances the existing twelve volumes and together these thirteen volumes represent the most authoritative comprehensive and up to date Encyclopaedia of Mathematics available **Fourth Summer School in Analysis and Mathematical Physics** Carlos Villegas-Blas, 2008-12-02 This book consists of three expository articles written by outstanding researchers in Mathematical Physics Rafael Benguria Peter Hislop and Elliott Lieb The articles are based on their lectures at the Fourth Summer School in Analysis and Mathematical Physics held at the Institute of Mathematics Universidad Nacional Autónoma de México Cuernavaca in May 2005 The main goal of the articles is to link the basic knowledge of a graduate student in Mathematics with three current research topics in Mathematical Physics Isoperimetric inequalities for eigenvalues of the Laplace Operator Random Schrödinger Operators and Stability of Matter respectively

These well written articles will guide and introduce the reader to current research topics and will also provide information on recent progress in some areas of Mathematical Physics **Spectral Theory and Geometry** E. Brian Davies, Yu

Safarov, London Mathematical Society, International Centre for Mathematical Sciences, 1999-09-30 This volume brings together lectures from an instructional meeting on spectral theory and geometry held under the auspices of the International Centre for Mathematical Sciences in Edinburgh The contributions here come from world experts and many are much expanded versions of the lectures they gave Together they survey the core material and go beyond to reach deeper results For graduate students and experts alike this book will be a highly useful resource **A Course in the Calculus of**

Variations Filippo Santambrogio, 2023-12-17 This book provides an introduction to the broad topic of the calculus of variations It addresses the most natural questions on variational problems and the mathematical complexities they present Beginning with the scientific modeling that motivates the subject the book then tackles mathematical questions such as the existence and uniqueness of solutions their characterization in terms of partial differential equations and their regularity It includes both classical and recent results on one dimensional variational problems as well as the adaptation to the multi dimensional case Here convexity plays an important role in establishing semi continuity results and connections with techniques from optimization and convex duality is even used to produce regularity results This is then followed by the more classical Hlder regularity theory for elliptic PDEs and some geometric variational problems on sets including the isoperimetric inequality and the Steiner tree problem The book concludes with a chapter on the limits of sequences of variational problems expressed in terms of convergence While primarily designed for master s level and advanced courses this textbook based on its author s instructional experience also offers original insights that may be of interest to PhD students and researchers A foundational understanding of measure theory and functional analysis is required but all the essential concepts are reiterated throughout the book using special memo boxes *Mathematical Constants II* Steven R.

Finch, 2003 Famous mathematical constants include the ratio of circular circumference to diameter 3.14 and the natural logarithm base $e \approx 2.718$ Students and professionals can often name a few others but there are many more buried in the literature and awaiting discovery How do such constants arise and why are they important Here the author renews the search he began in his book *Mathematical Constants* adding another 133 essays that broaden the landscape Topics include the minimality of soap film surfaces prime numbers elliptic curves and modular forms Poisson Voronoi tessellations random triangles Brownian motion uncertainty inequalities Prandtl Blasius flow from fluid dynamics Lyapunov exponents knots and tangles continued fractions Galton Watson trees electrical capacitance from potential theory Zermelo s navigation problem and the optimal control of a pendulum Unsolved problems appear virtually everywhere as well This volume continues an outstanding scholarly attempt to bring together all significant mathematical constants in one place **Spectral Analysis of**

Quantum Hamiltonians Rafael Benguria, Eduardo Friedman, Marius Mantoiu, 2012-06-30 This volume contains surveys as

well as research articles broadly centered on spectral analysis Topics range from spectral continuity for magnetic and pseudodifferential operators to localization in random media from the stability of matter to properties of Aharonov Bohm and Quantum Hall Hamiltonians from waveguides and resonances to supersymmetric models and dissipative fermion systems This is the first of a series of volumes reporting every two years on recent progress in spectral theory **Complex Quantum Systems: Analysis Of Large Coulomb Systems** Heinz Siedentop, 2013-05-20 This volume is based on lectures given during the program Complex Quantum Systems held at the National University of Singapore's Institute for Mathematical Sciences from 17 February to 27 March 2010 It guides the reader through two introductory expositions on large Coulomb systems to five of the most important developments in the field derivation of mean field equations derivation of effective Hamiltonians alternative high precision methods in quantum chemistry modern many body methods originating from quantum information and the most complex semirelativistic quantum electrodynamics These introductions are written by leaders in their fields amongst them are Volker Bach Rafael Benguria Thomas Chen and Jan Philip Solovej Together they fill a gap between current textbooks and the vast modern literature on complex quantum systems *Spectral Theory and Mathematical Physics: A Festschrift in Honor of Barry Simon's 60th Birthday* Fritz Gesztesy, 2007 This Festschrift had its origins in a conference called SimonFest held at Caltech March 27-31, 2006 to honor Barry Simon's 60th birthday It is not a proceedings volume in the usual sense since the emphasis of the majority of the contributions is on reviews of the state of the art of certain fields with particular focus on recent developments and open problems The bulk of the articles in this Festschrift are of this survey form and a few review Simon's contributions to a particular area Part 1 contains surveys in the areas of Quantum Field Theory Statistical Mechanics Nonrelativistic Two Body and N Body Quantum Systems Resonances Quantum Mechanics with Electric and Magnetic Fields and the Semiclassical Limit Part 2 contains surveys in the areas of Random and Ergodic Schrodinger Operators Singular Continuous Spectrum Orthogonal Polynomials and Inverse Spectral Theory In several cases this collection of surveys portrays both the history of a subject and its current state of the art A substantial part of the contributions to this Festschrift are survey articles on the state of the art of certain areas with special emphasis on open problems This will benefit graduate students as well as researchers who want to get a quick yet comprehensive introduction into an area covered in this volume Schrödinger Operators: Eigenvalues and Lieb-Thirring Inequalities Rupert L. Frank, Ari Laptev, Timo Weidl, 2022-11-17 The analysis of eigenvalues of Laplace and Schrödinger operators is an important and classical topic in mathematical physics with many applications This book presents a thorough introduction to the area suitable for masters and graduate students and includes an ample amount of background material on the spectral theory of linear operators in Hilbert spaces and on Sobolev space theory Of particular interest is a family of inequalities by Lieb and Thirring on eigenvalues of Schrödinger operators which they used in their proof of stability of matter The final part of this book is devoted to the active research on sharp constants in these inequalities and contains state of the

art results serving as a reference for experts and as a starting point for further research **Mathematical Constants**

Steven R. Finch, 2003-08-18 Steven Finch provides 136 essays each devoted to a mathematical constant or a class of constants from the well known to the highly exotic This book is helpful both to readers seeking information about a specific constant and to readers who desire a panoramic view of all constants coming from a particular field for example combinatorial enumeration or geometric optimization Unsolved problems appear virtually everywhere as well This work represents an outstanding scholarly attempt to bring together all significant mathematical constants in one place

Function Spaces, Interpolation Theory and Related Topics Michael Cwikel, Miroslav Engliš, Alois Kufner, Lars-Erik Persson, Gunnar Sparr, 2008-08-22 This volume contains 16 refereed research articles on function spaces interpolation theory and related fields Topics covered theory of function spaces Hankel type and related operators analysis on bounded symmetric domains partial differential equations Green functions special functions homogenization theory Sobolev embeddings Coxeter groups spectral theory and wavelets The book will be of interest to both researchers and graduate students working in interpolation theory function spaces and operators partial differential equations and analysis on bounded symmetric domains

General Inequalities 7 Catherine Bandle, William N. Everitt, László Losonczi, Wolfgang Walter, 2012-12-06 Inequalities continue to play an essential role in mathematics The subject is perhaps the last field that is comprehended and used by mathematicians working in all the areas of the discipline of mathematics Since the seminal work *Inequalities* 1934 of Hardy Littlewood and Pólya mathematicians have laboured to extend and sharpen the earlier classical inequalities New inequalities are discovered every year some for their intrinsic interest whilst others flow from results obtained in various branches of mathematics So extensive are these developments that a new mathematical periodical devoted exclusively to inequalities will soon appear this is the *Journal of Inequalities and Applications* to be edited by R P Agarwal Nowadays it is difficult to follow all these developments and because of lack of communication between different groups of specialists many results are often rediscovered several times Surveys of the present state of the art are therefore indispensable not only to mathematicians but to the scientific community at large The study of inequalities reflects the many and various aspects of mathematics There is on the one hand the systematic search for the basic principles and the study of inequalities for their own sake On the other hand the subject is a source of ingenious ideas and methods that give rise to seemingly elementary but nevertheless serious and challenging problems There are many applications in a wide variety of fields from mathematical physics to biology and economics *Topics in Mathematical Analysis* Paolo Ciatti, 2008 This volume consists of a series of lecture notes on mathematical analysis The contributors have been selected on the basis of both their outstanding scientific level and their clarity of exposition Thus the present collection is particularly suited to young researchers and graduate students Through this volume the editors intend to provide the reader with material otherwise difficult to find and written in a manner which is also accessible to nonexperts **Semigroups and Automata** Uno Kaljula, 2006-02-16 Presents the English translation of

Kaljulaid's 1979 Tartu Minsk Candidate thesis. The thesis was devoted to representation theory in the spirit of his thesis advisor BI Plotkin. Through representation theory Kaljulaid became also interested in automata theory which at a later phase became his main area of interest.

Clinical Management of Herpes Viruses Stephen L. Sacks, 1995. Much has been said about managing herpesvirus infections since the discovery of acyclovir more than 15 years ago. This book aims to bring practical advice to the key clinician who is faced with managing these infections. It addresses questions like: there are antiviral treatments for many of these infections but who should be getting these drugs and who should not? What are the advantages if any of the new drugs over the old ones? Which patients should be targeted for intervention? What is the clinical reality of antiviral resistance? Where do the up and coming vaccines fit into the picture? When should therapy be discontinued or reassessed? How are patients presenting other than chorioretinitis in AIDS or pneumonitis in transplantation? The contributing clinician scientists deal with these questions and many more.
